## **Bugzilla ID:** 532377 **Bugzilla Summary:** Add CERTUM's new Root CA to Mozilla's trusted root list

CAs wishing to have their certificates included in Mozilla products must comply with the requirements of the Mozilla CA certificate policy (http://www.mozilla.org/projects/security/certs/policy/) and must supply the information necessary to determine whether or not the policy's requirements have been satisfied, as per <a href="http://wiki.mozilla.org/CA:Information\_checklist">http://wiki.mozilla.org/CA:Information\_checklist</a>.

General Information	Data
CA Name	Certum
Website URL	http://www.certum.eu/
Organizational type	public corporation
Primary market /	CERTUM - Broader Certification Center is an organizational unit of Unizeto Technologies SA, providing certification services
customer base	related to electronic signatures. It is the oldest public certification authority in Poland and the commercial certification authority,
	operating on a global scale - serving customers in over 50 countries worldwide.
CA Contact	CA Email Alias: <u>info@certum.pl</u>
Information	CA Phone Number: +48 91 4801 201
	Title / Department: CERTUM PKI Services
	System Administrator - Wojciech Ślusarczyk - wslusarczyk@certum.pl, +48 91 4801 282
	Security Inspector - Michał Proszkiewicz - mproszkiewicz@certum.pl, +48 91 4257 441
	Product Manager - Tomasz Litarowicz, +48 91 4801 240
	Head of the CA - <u>pmatusiewicz@unizeto.pl</u>

CA's are also encouraged to review the Recommended Practices at https://wiki.mozilla.org/CA:Recommended\_Practices.

For Each Root CA whose certificate is to be included in Mozilla (or whose metadata is to be modified)

Info Needed	Data
Certificate Name	Certum Trusted Network CA
Cert summary / comments	Certum currently has a root named "Certum CA" included in NSS. Eventually, the certificates under the old "Certum CA" root will be moved to this new root. Currently this new root has two sub-CAs: Class 1 and EV. Comment #4: New root was created due to requirements of WebTrust for EV audit (old root do not have SKI and Key usage extensions). We are going to move all (at firs SSL certificates) certificates under the new root, at the moment we have only Class1 an EV intermediate certificate generated.
The root CA certificate URL	http://repository.certum.pl/CTNCA.crt
SHA-1 fingerprint.	07:E0:32:E0:20:B7:2C:3F:19:2F:06:28:A2:59:3A:19:A7:0F:06:9E
Valid from	2008-10-22
Valid to	2029-12-31

Cert Version	3
Modulus length / key length	2048
Test Website	https://juice.certum.pl/
CRL URL	ARL: http://crl.certum.pl/ctnca.crl
	Class 1 CRL: http://crl.certum.pl/c1.crl (Next Update: 1 month)
	EV SSL CRL: <u>http://crl.certum.pl/evca.crl</u> (Next Update: 9 days)
	All Certum CRLs: http://www.certum.eu/certum/cert,certificates_crl_lists.xml
OCSP Responder URL	Comment #4: At the moment we do not support OCSP for new root but due to CA/Browser Forum Guidelines version 1.2 in
- F	section 11.1.1 there is: "CAs MUST support an OCSP capability for Subscriber Certificates that are issued after Dec 31,
	2010". We are still making some changes and preparation but OCSP will be available as it is required by CA/Browser Forum
	Guidelines.
CRL/OCSP Issuing Frequent	NextUpdate for the EV SSL CRL is 9 days.
	EV CP section 26. EV SSL Certificate Status Checking
	CERTUM maintains an online 24x7 Repository mechanism whereby Internet browsers can automatically check online the
	current status of all certificates. (1) For EV SSL Certificates:
	(A) CRLs are updated and reissued at least every seven days, and the nextUpdate field value SHALL NOT be more ten days;
	or
	(B) OCSP Since January 2010 Certum Extended Validation CA will provide revocation information via an Online Certificate
	Status Protocol (OCSP) service and update that service at least every four days. OCSP responses from this service will have
	a maximum expiration time of ten days.
CA Hierarchy	CA Hierarchy Diagram shown in Figure 1.1 of CPS of CERTUM's Non-Qualified Certification Services
	There are three separate roots:
	1) "National Root" for the Qualified Certification Services (not part of this request)
	2) "Certum CA" for the non-Qualified Certification Services (this root is currently in NSS)
	3) "Certum Trusted Network CA" for non-Qualified Certification Services (this new root)
	This "Certum Trusted Network CA" root currently has two sub-CAs:
	1) Certum Class 1 CA (for 3 month test certs)
	2) Certum Extended Validation CA
	The hierarchy of this root is referred to as the ctnDomena domain within the CPS.
	The metalenty of this foot is referred to as the curboniena domain within the CFS.
	Eventually the certificates under the "Certum CA" root will be transitioned to the new root.
	The "Certum CA" root has the following sub-CAs:
	• Certum Level I CA. These certificates are intended mainly for the application or device test performance prior to
	purchasing final certificate.
	• Certum Level II CA. These certificates are intended mainly for securing electronic correspondence, encrypting binary
	objects and protecting data transmission.

	Audit Report and Management's Assertions: <u>https://cert.webtrust.org/ViewSeal?id=980</u> (2009.10.20)
Organization Identity	From CPS of CERTUM's Non-Qualified Certification Services
Verification	See Table 1.4: Certum Level I CA and Certum Class 1 CA – DV only. Identity of subscriber not verified. Only domain name ownership via email exchange. Can only be used for testing with a private SSL server.
	Certum Level II CA – Signs certs used for S/MIME, not for SSL or code signing.
	Certum Level III CA – Signs certs for use with enterprise SSL servers. Also signs certs for code signing and S/MIME. Certum Level IV CA for the certification authorities, non-repudiation authorities and global network-based electronic transaction systems. Certum Extended Validation CA – Signs EV SSL certs
	<ul> <li>3.2.2. Authentication of Legal Entity's Identity</li> <li>The registration authority is required to request suitable documents from the subscriber, which without any doubts confirm the identity of the legal entity on whose behalf the application is submitted and the private entity that represent it (or submits the application). Registration authority may collect the data required for identification by its own, e.g. through publicly available databases. Authentication of legal entity's identity has two purposes. The first purpose is to prove that at the time of application examination the legal entity stated in the application existed; the second purpose is to prove that a private entity applying for a certificate or receiving it is authorized by this legal entity to represent it. Submitted documents (or collected data) should prove:</li> <li>identity of the subscriber or certificate administrator (in the case of certificates issued for legal entities or devices),</li> <li>existence of the legal entity or institution,</li> <li>the right of the subscriber or the certificate administrator to act on behalf of the institution or legal entity.</li> <li>registration authority operator may – in doubtful cases – verify the registration of the domain in publicly available WHOIS services.</li> </ul>
	There are two basic ways of legal entity's identity authentication. The first one requires the legal entity's authorized representative's personal attendance in a registration authority, or a registration authority representative's presence in person in the legal entity's seat (specified in the application). In the second case, the identity can be authenticated on-line by means of messages exchanged directly with a certification authority or its agent. Detailed requirements on the identification documents and it verification are specified in separate document – <i>Identity verification instruction</i> .
	A registration authority is committed to verify the correctness and truthfulness of all data provided in an application. In the

case of EV SSL certificates additional procedure set out in Appendix 3 shall be applied.
3.2.3. Authentication of Private Entity's Identity Authentication of private entity's identity has two purposes. The authentication must prove that (1) data provided in an application concern an existing private entity and (2) the requester is indeed the private entity stated in the application. Procedures and requirements for private entity identity authentication are the same as for legal entities. The only difference is that the existence of the legal entity and the right to act on its behalf verification is amended by verification of the right to use distinguished names other that name and surname.
3.2.5. Government Entities and Organizations validation In the case where a person's name placed on the certificate contains the name of the organization (O), then this should be interpreted as the person's affiliation or authorization of that person to act on behalf of the organization. This means that CERTUM:
<ul> <li>verified that the organization was existing at the time of issued the certificate, the verification was based on independent sources of information or based on an extract from the National Court Register;</li> <li>verified that the individual whose data are included in the certificate was an employee organization or its subcontractor at the time of issuance of the certificate of organization and has the right to act on behalf of the organization; the scope of authorization and the period of validity may be regulated by separate legislation or the relying party in the course of verification a digital signature or decryption the received document and is outside the scope of liability of CERTUM; individual's identity and authorization may be checked by CERTUM on the basis of available records or database, contact by phone or e-mail to the organization.</li> </ul>
<ul> <li>4.2.2.1. Application Processing in Registration Authority</li> <li>Every application submitted to a request confirmation box or submitted to a registration authority in a paper version, is processed in the following way:</li> <li>- a registration authority operator obtains subscriber's application (a paper version or an electronic version from the request confirmation box),</li> </ul>
<ul> <li>a registration authority operator checks whether the subscriber has made a charge for processing an application for a certificate, provided that such payment is provided in the price list of CERTUM, in the absence of such a charge, the request is rejected.</li> <li>the operator verifies data listed in the application, e.g. subscriber's personal data (see the procedure described in Chapter 3.2.2, 3.2.3 or 3.2.5) and checks the proof of private key possession if it exists (see Chapter 3.2.1),</li> <li>positive verification, the operator confirms (signs) the request; if the original application contains wrong data, it is rejected,</li> <li>the confirmed application is submitted to a request box of a certification authority,</li> <li>a registration authority may also verify other data that are not listed in an application and required by CERTUM to run a business.</li> </ul>

	4.2.2.3. Certificate Issuance Denial CERTUM can refuse certificate issuance to any requester without taking any obligations or responsibility that might follow the requester's damages or loss resulting from this denial. The certification authority should immediately refund the requester the certificate fee (if the requester paid it), unless the requester stated false data in his/her/its application. Certificate issuance denial can occur:
	<ul> <li>the subscriber cannot prove his/her rights to proposed DN,</li> <li>if there is suspicion or certainty that the subscriber falsified the data or stated false data,</li> </ul>
	- subscriber in especially inconvenient manner engaged resources and processing means of CERTUM by submitting number of request clearly in excess of his/her/its needs,
	- subscriber did not make a payment for issuing a certificate, provided that such payment is provided in the price list of
	CERTUM,
	- other reasons not specified above.
Domain Name Ownership / Control for SSL Certs	Verification procedures for "Certum Class 1 CA" are the same as for "Certum Level I CA". Domain ownership is verified, not identity. For "Certum Level III CA" SSL certs are both DV and OV.
Certs	From CPS of CERTUM's Non-Qualified Certification Services
	3.2.2. Authentication of Legal Entity's Identity
	Submitted documents (or collected data) should prove:
	registration authority operator may – in doubtful cases – verify the registration of the domain in publicly available WHOIS
	services.
	4.2.2.3. Certificate Issuance Denial Certificate issuance denial can occur:
	- the subscriber cannot prove his/her rights to proposed DN,
Domain Name	From EV CP
Ownership / Control	18. Verification of Applicant's Domain Name
for EV SSL Certs	To verify Applicant's registration, or exclusive control, of the domain name(s) to be listed in the EV SSL Certificate, CERTUM verifies that each such domain name satisfies the following requirements:
	(1) The domain name is registered with an Internet Corporation for Assigned Names and Numbers (ICANN)-approved registrar or a registry listed by the Internet Assigned Numbers Authority (IANA);
	(2) Domain registration information in the WHOIS database SHOULD be public and SHOULD show the name, physical address, and administrative contact information for the organization.
	For Government Entity Applicants, CERTUM relies on the domain name listed for that entity in the records of the QGIS in Applicant's Jurisdiction to verify Domain Name.
	(3) Applicant is the registered holder of the domain name, or has been granted the exclusive right to use the domain name by the registered holder of the domain name;
	(4) Applicant is aware of its registration or exclusive control of the domain name;

	<ul><li>(A) Acceptable methods by which CERTUM verifies that Applicant is the registered holder of the domain name include the following:</li><li>(1) Performing a WHOIS inquiry on the Internet for the domain name supplied by Applicant, and obtaining a response</li></ul>
	<ul> <li>indicating that Applicant or a Parent/Subsidiary Company is the entity registered to the domain name; or</li> <li>(2) Communicating with the contact listed on the WHOIS record to confirm that Applicant is the registered holder of the domain name and having the contact update the WHOIS records to reflect the proper domain name registration.</li> <li>Confirmation that the registered owner of the domain name is a Parent/Subsidiary Company of Applicant, or a registered trading name of Applicant is sufficient to establish that Applicant is the registered owner of the domain name;</li> <li>(3) In cases where domain registration information is private, and the domain registrar offers services to forward communication to the registered domain holder, CERTUM contacts Applicant through the domain registrar by e-mail or paper mail.</li> </ul>
	<ul> <li>(B) In cases where Applicant is not the registered holder of the domain name, CERTUM verifies Applicant's exclusive right to use the domain name(s). In addition, CERTUM verifies Applicant's exclusive right to use the domain name using one of the following methods:</li> <li>(1) Relying on a Verified Legal Opinion to the effect that Applicant has the exclusive right to use the specified domain name in identifying itself on the Internet; or</li> </ul>
	(2) Relying on a representation from the Contract Signer, or the Certificate Approver, if expressly so authorized in a mutually-agreed-upon contract.
	In cases where the registered domain holder cannot be contacted, CERTUM will: - Relies on a Verified Legal Opinion to the effect that Applicant has the exclusive right to use the specified domain name in identifying itself on the Internet, and
	- Relies on a representation from the Contract Signer, or the Certificate Approver, if expressly so authorized in a mutually- agreed-upon contract, coupled with a practical demonstration by Applicant establishing that it controls the domain name by making an agreed-upon change in information found online on a web page identified by a uniform resource identifier containing Applicant's FQDN;
	CERTUM may verifies the Applicant is aware that it has exclusive control of the domain name obtaining a confirmation from the Contract Signer or Certificate Approver verifying that Applicant is aware that it has exclusive control of the domain name.
Email Address Ownership / Control	<ul> <li>&gt; Verification of email address is achieved by sending via email a message that contain unique web address necessary to get the certificate. Only by entering this address certificate is released.</li> <li>&gt; I think that's sufficient. Please point me to where it is documented in the CP or CPS.</li> <li>It will be added in next iteration of CPS and CP changes and will be published in next few months</li> </ul>
	CP of CERTUM's Non-Qualified Certification Services

	Section 2.1, Level I Certificates: In most cases email address, address data and name and surname of the private entity or the representative of the legal entity are subjected to verification. Section 2.2, Level II Certificates: Operators of Certum Level II CA verify the information provided by the requesters during the certification process. Detailed information on identity verification requirements are described in dedicated document ( <i>Identity verification instruction</i> ). Section 2.3, Level III Certificates: These certificates are intended mainly for securing electronic correspondence, securing binary objects against forgery and protecting data transmission on the basis of SSL and TLS protocol. Operators of Certum Level III CA verify the information provided by the requesters during the certification process. Detailed information on
	identity verification requirements are described in dedicated document (Identity verification instruction).
Identity of Code	Procedures for Code Signing Certificates are in the CPS of CERTUM's Non-Qualified Certification Services
Signing Subscriber	sections 3 and 4. Code Signing certs can be issued under the Certum Level III CA.
Potentially	http://wiki.mozilla.org/CA:Problematic_Practices
Problematic	Long-lived DV certificates
Practices	• CPS of CERTUM's Non-Qualified Certification Services, table 6.6 on page 82.
	• Level I: 3 months (DV)
	• Level II: 1 year (not SSL)
	<ul> <li>Level III: 2 years (OV)</li> <li>Level IV: 2 years</li> </ul>
	<ul> <li>Level IV: 2 years</li> <li>EV SSL: 1 year</li> </ul>
	Wildcard DV SSL certificates
	• Wildcard DV SSE certificates • Wildcard certs aren't allowd for level I. Level III and above SSL certs are OV.
	<ul> <li>Delegation of Domain / Email validation to third parties</li> </ul>
	<ul> <li>Comment #4: We do not delegate any validation process to third parties</li> </ul>
	<ul> <li>Issuing end entity certificates directly from roots</li> </ul>
	• No. Root only signs sub-CAs.
	Allowing external entities to operate unconstrained subordinate CAs
	• Not applicable
	Distributing generated private keys in PKCS#12 files
	• As it is stated in CPS in section 6.1.1: "Generally, every subscriber generates his/her/its key pair by
	himself/herself/itself. The generation may also be delegated to a certification authority (applicable
	only for keys generated on cryptographic cards)."
	<u>Certificates referencing hostnames or private IP addresses</u>
	• Comment #4: At the moment we do not intend to issue such certificates
	<u>Issuing SSL Certificates for Internal Domains</u>
	<ul> <li>Comment #4: for SSL certs for internal domains "We validate organization, and person responsible for certification process"</li> </ul>

OCSP Responses signed by a certificate under a different root
• Not applicable
<u>CRL with critical CIDP Extension</u>
<ul> <li>CRLs download into Firefox browser without error.</li> </ul>
<u>Generic names for CAs</u>
• Root name is not generic
