Language by Country - Help Card

Column Definitions

Country - Name of the country where the visitor or the visitor's IP address is located.

Language - This report provides information on the Language Preference setting of the visitor's browser.

Note that if a visitor changes the Language Preference during a session, the visit is counted for multiple languages.

Values for "Unknown language" represent hits where the parameter was not present in the Web data activity file. Visit totals are not provided because client detail attributes such as language preference can change within a single session, if for example, a visitor has multiple browsers open to the same web site at once.

Visit Page Views - The number of pages viewed during a visit.

Visits - A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

Note that if the dimension changes state during the course of a visit (such as a visitor changing from non-customer to customer), the visit will be recorded for both states. In such cases, the total of visits in this report may be greater than the number of visits reported in the Overview. In the Key Metrics Summary report for example, if a visit spans several hours, it is recorded in each of the hours.

This report was created on Tuesday, June 12, 2012 - 2:35:47 PM
