Welcome to mana.mozilla.org

Mana [1] is an indigenous Pacific islander concept of an impersonal force or quality that resides in people, animals, and (debatably) inanimate objects.

It has commonly been interpreted as "the stuff of which magic is formed," as well as the substance of which souls are made.

Modern fantasy fiction, computer and role-playing games have adopted mana as a term for magic points, an expendable (and most often rechargeable) resource out of which magic users form their magical spells.

At Mozilla IT, we've always been fighting an uphill battle to have everything we need documented and easily accessible. Therefore, we christened this instance *mana* aka pure !@#$%^& magic.
