

Firefox 3.6 vs. Firefox 13 on Mac streaming performance

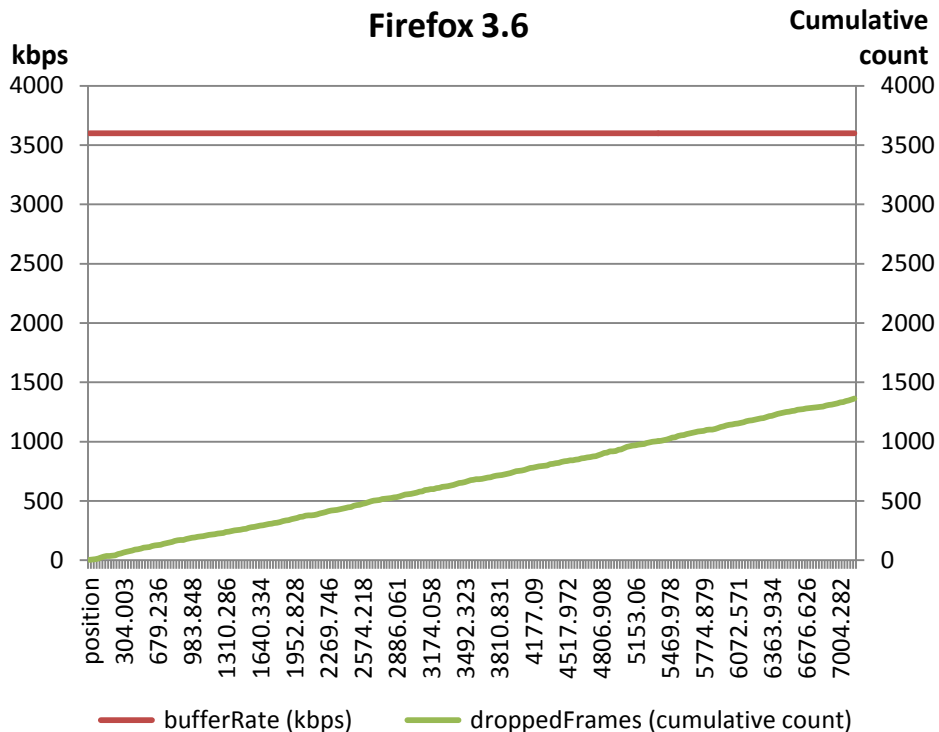

Test Configuration

- 13" Macbook air
 - 1.7 GHz Core i5
 - Intel HD Graphics 3000 384 MB
 - OS X Lion 10.7.4
- 2 hour movie playback in full screen mode
- Playback control panel on screen for duration of playback
- In-browser performance comparable so not included in results

Full screen (2 hours of play)

- Streaming drops to 235kbps (lowest rate) in response to high rate of dropped frames
- Approx 6.8 dropped frames per second, independent of bitrate. This is not watchable.

- Playback stable at highest bitrate (3600kbps)
- Approx 0.2 dropped frames per second, which is barely perceptible.
