

Summary

JavaScript timer based window.print() function conflicts with command-P function resulting in dialog interaction conflict

The web page contains the the following JavaScript:

```
<script type="text/javascript">
  window.setTimeout(printPage, 5000);

  function printPage() {
    window.print();
    window.close();
  }
</script>
```

which I believe to be the root of the problem.
