Data Collected
Glossary

1 What the Firefox Health Report Measures

The Firefox Health Report (FHR) has 5 categories of metrics:

Configuration
   device hardware, operating system, Firefox version
Customizations
   add-ons, count and type
Performance
   timing of browser events, rendering, session restores
Wear and Tear
   length of session, how old a profile is, count of crashes, count of pages
Enveloping
   used to manage the longitudinal data series of coarse-grained daily data

2 Detailed Description

2.1 Configuration

Device hardware, operating system, Firefox version

Metric	Description
appABI	Binary interface for XPCOM (https://developer.mozilla.org/en/XPCOM_ABI)
appBuildID	Identifier for this build of the application based on the date the build was started
appBuildTargetOS	Operating System for which this build was configured
appDistribution	Identifier for the particular distribution of the application in use. It is taken from the "distribution.id" preference
appDistributionVersion	Version of the distribution, taken from the "distribution.version" preference
appHotFixVersion	The version number of any Mozilla hotfix applied to the application
appID	Identifier unique to the application that indicates it is Firefox or Thunderbird, etc. Same for all installations of an application regardless of the value of appName
appName	The configured name of the application (Firefox / Aurora / Nightly for instance)
appUpdateChannel	The channel this installation checks for application updates (nightly/aurora/beta/release)
appVendor	The name of the company/provider who built this version
appVersion	The current version of the product
