Concept: A great app

What is the purpose of your app?

If you already have a list of tasks, an idea for your app and the type of user you are targeting, it's time to create a goal statement: Define your app's purpose and the most important user in one sentence. This is your main use case.

Example: A wish list creation tool for people who never do impulse shopping.

Focus on one main use case

It is possible that you cannot include all the tasks on your list in your goal statement. That is ok, because you should focus on one main use cases, which is how most people will use your application. Awesome apps do one thing well.

How will people use your app?

By now, you've identified your main use case, target users, and key features. Your main scenario should also consider the user environment in which your app is used. For example, a young mom with her baby at daycare might use your app to note a nice stroller (potential multi-tasking, pausing and continuing the task later). A different user might plan her next laptop purchase at home, in an armchair, without interruptions.

Concentrate on a few key features

Look at your task list again. Filter your list through the goal statement. If the tasks do not align with your goal statement, exclude them in your app.

Describe each core task as a feature and then ask yourself, is this feature essential? Or is it nice-to-

Firefox OS

Developer Preview Phone

Bringing the Open Web to mobile devices.

Firefox OS is a new mobile operating system built entirely using open web standards. In Firefox OS, HTML5 apps can do "phone things" – they can make the phone vibrate, make a phone call or send a text message.
