1) (ensure that a contact exists in the contact list with a valid	2) open message app		(4) add a		etelv ir	nvalid

mobile phone number.

3) select new message

5) type something in the message field 6) select send

number to the 'to field'

6.1) Message is created, but sent and fails ...however name of first contact in contact list is now present in header for some reason 7) Select header

7.1 overlay opens with invalid number input in step
