Description • 4 years ago

The current patch stack on [bug-811024](#) lets us split flex containers, but doesn't actually split the children or push any children out of the container's first continuation.

I'm filing this bug on splitting/pushing the children.

Created [attachment 8403411](#) [details]

display:flex; flex-flow:row; printing testcase

I moved the testcease also. This bug was with the floated div in the past which one is fixed already, so this should be something similar.
