

# Mozilla Firefox Profile Re-Invented

The Future of Privacy in Firefox

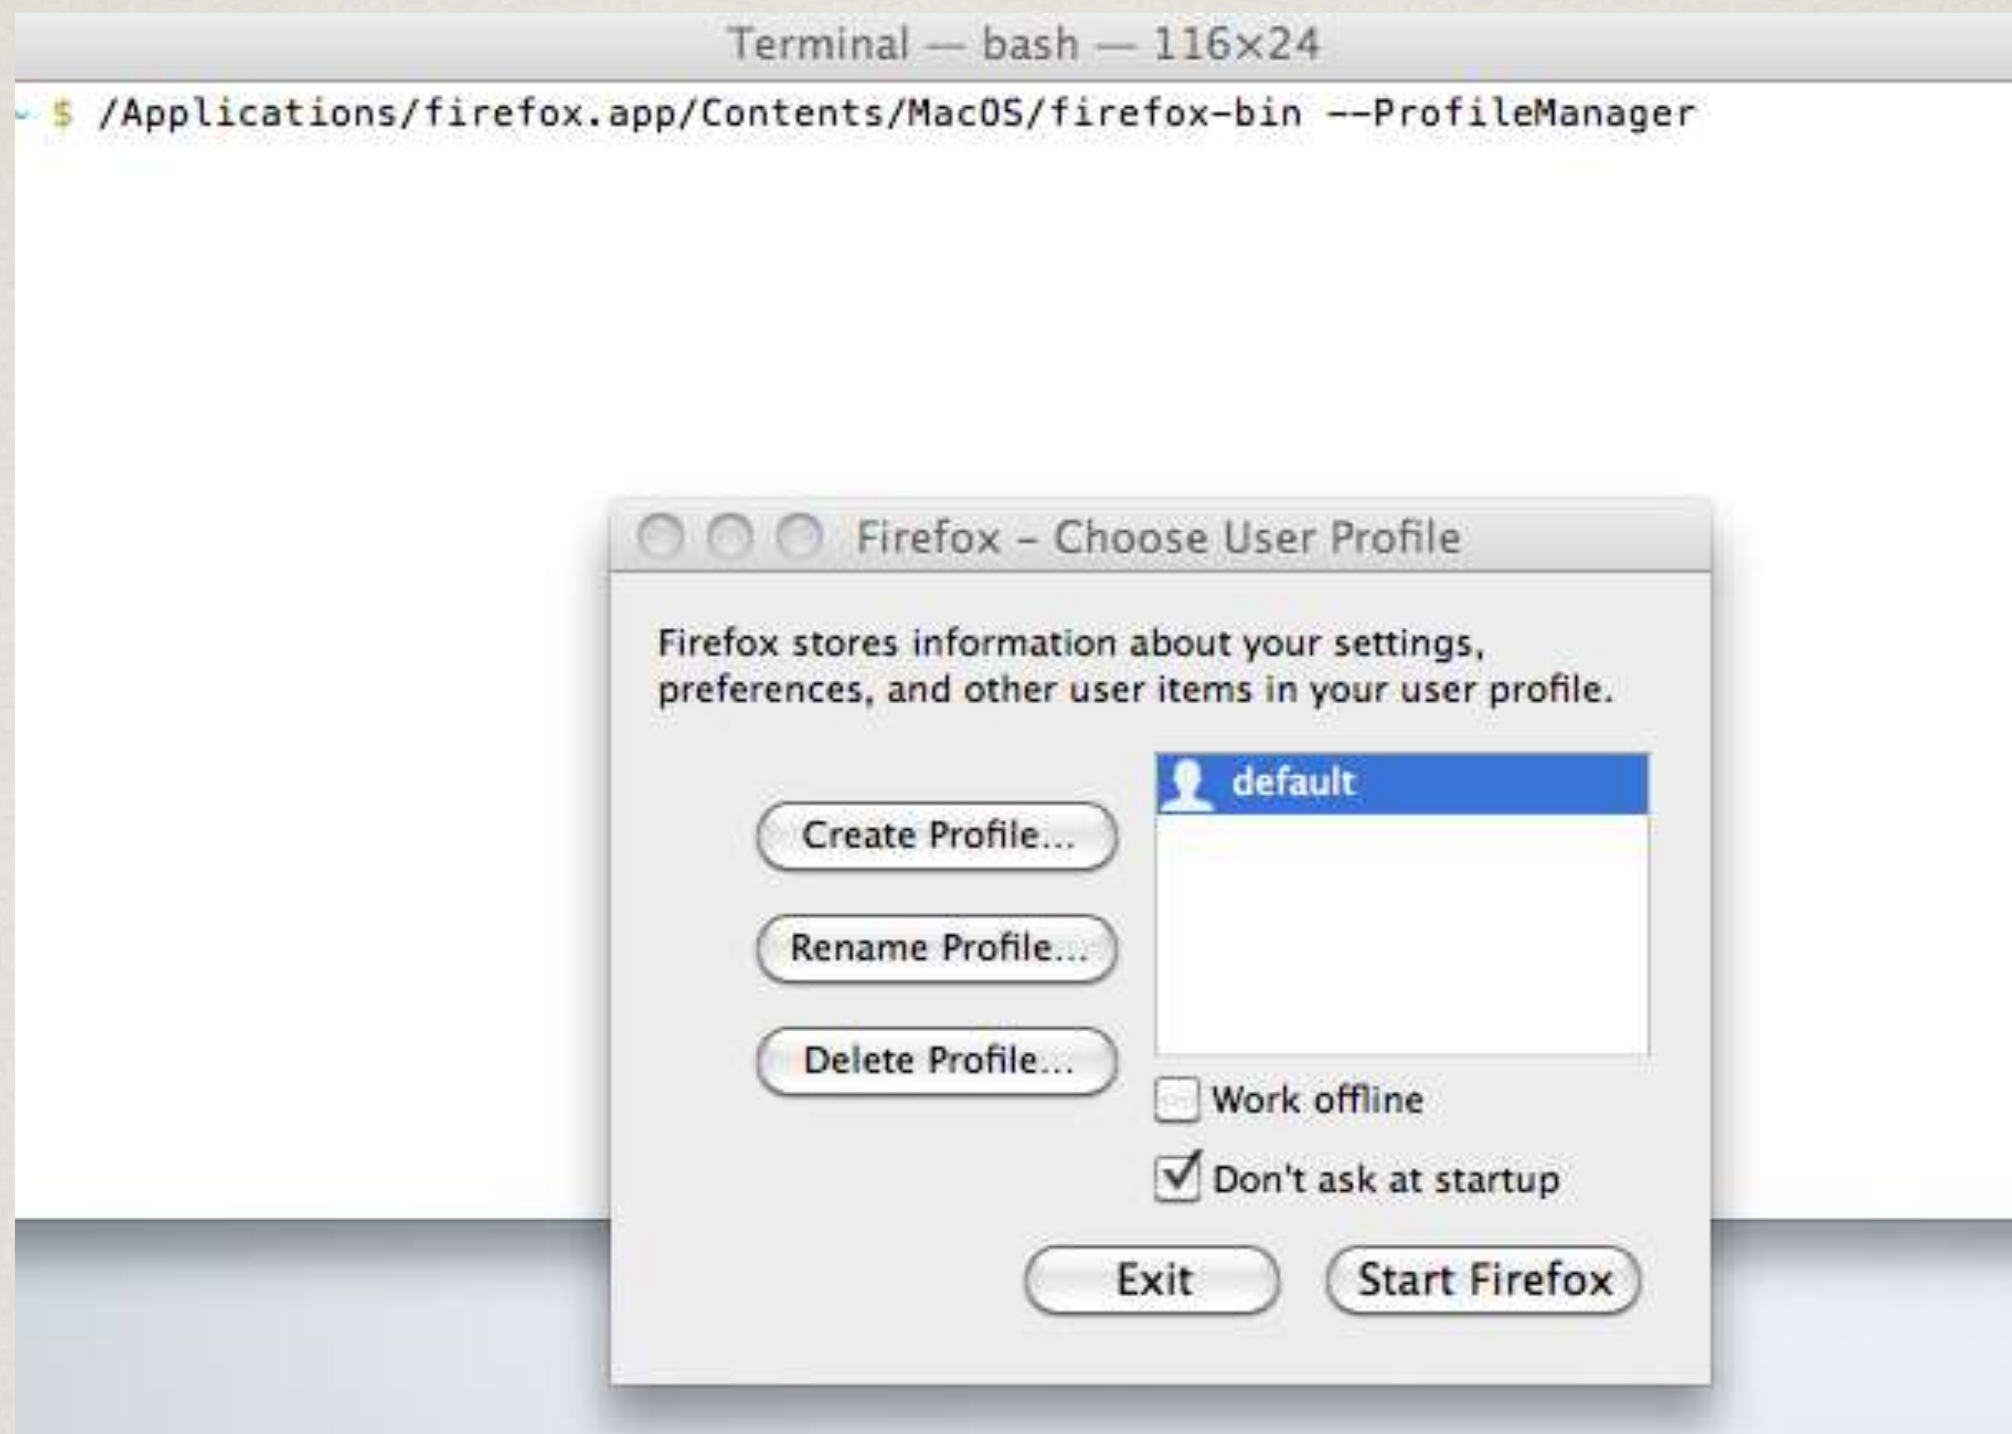

Idea Presented By Karthik Padmanabhan  
( [karthik@karlog.in](mailto:karthik@karlog.in) )

# Do you know ?

Most Users who are using Firefox don't know that it uses Profiles to Save and Sync Data in their Browser.

# Profiles are not yet \*pro\* \*files\*

The Profiles that Firefox uses currently are not yet to its maximum use.

Using Profiles in a different way can just make browsing experience more seamless.

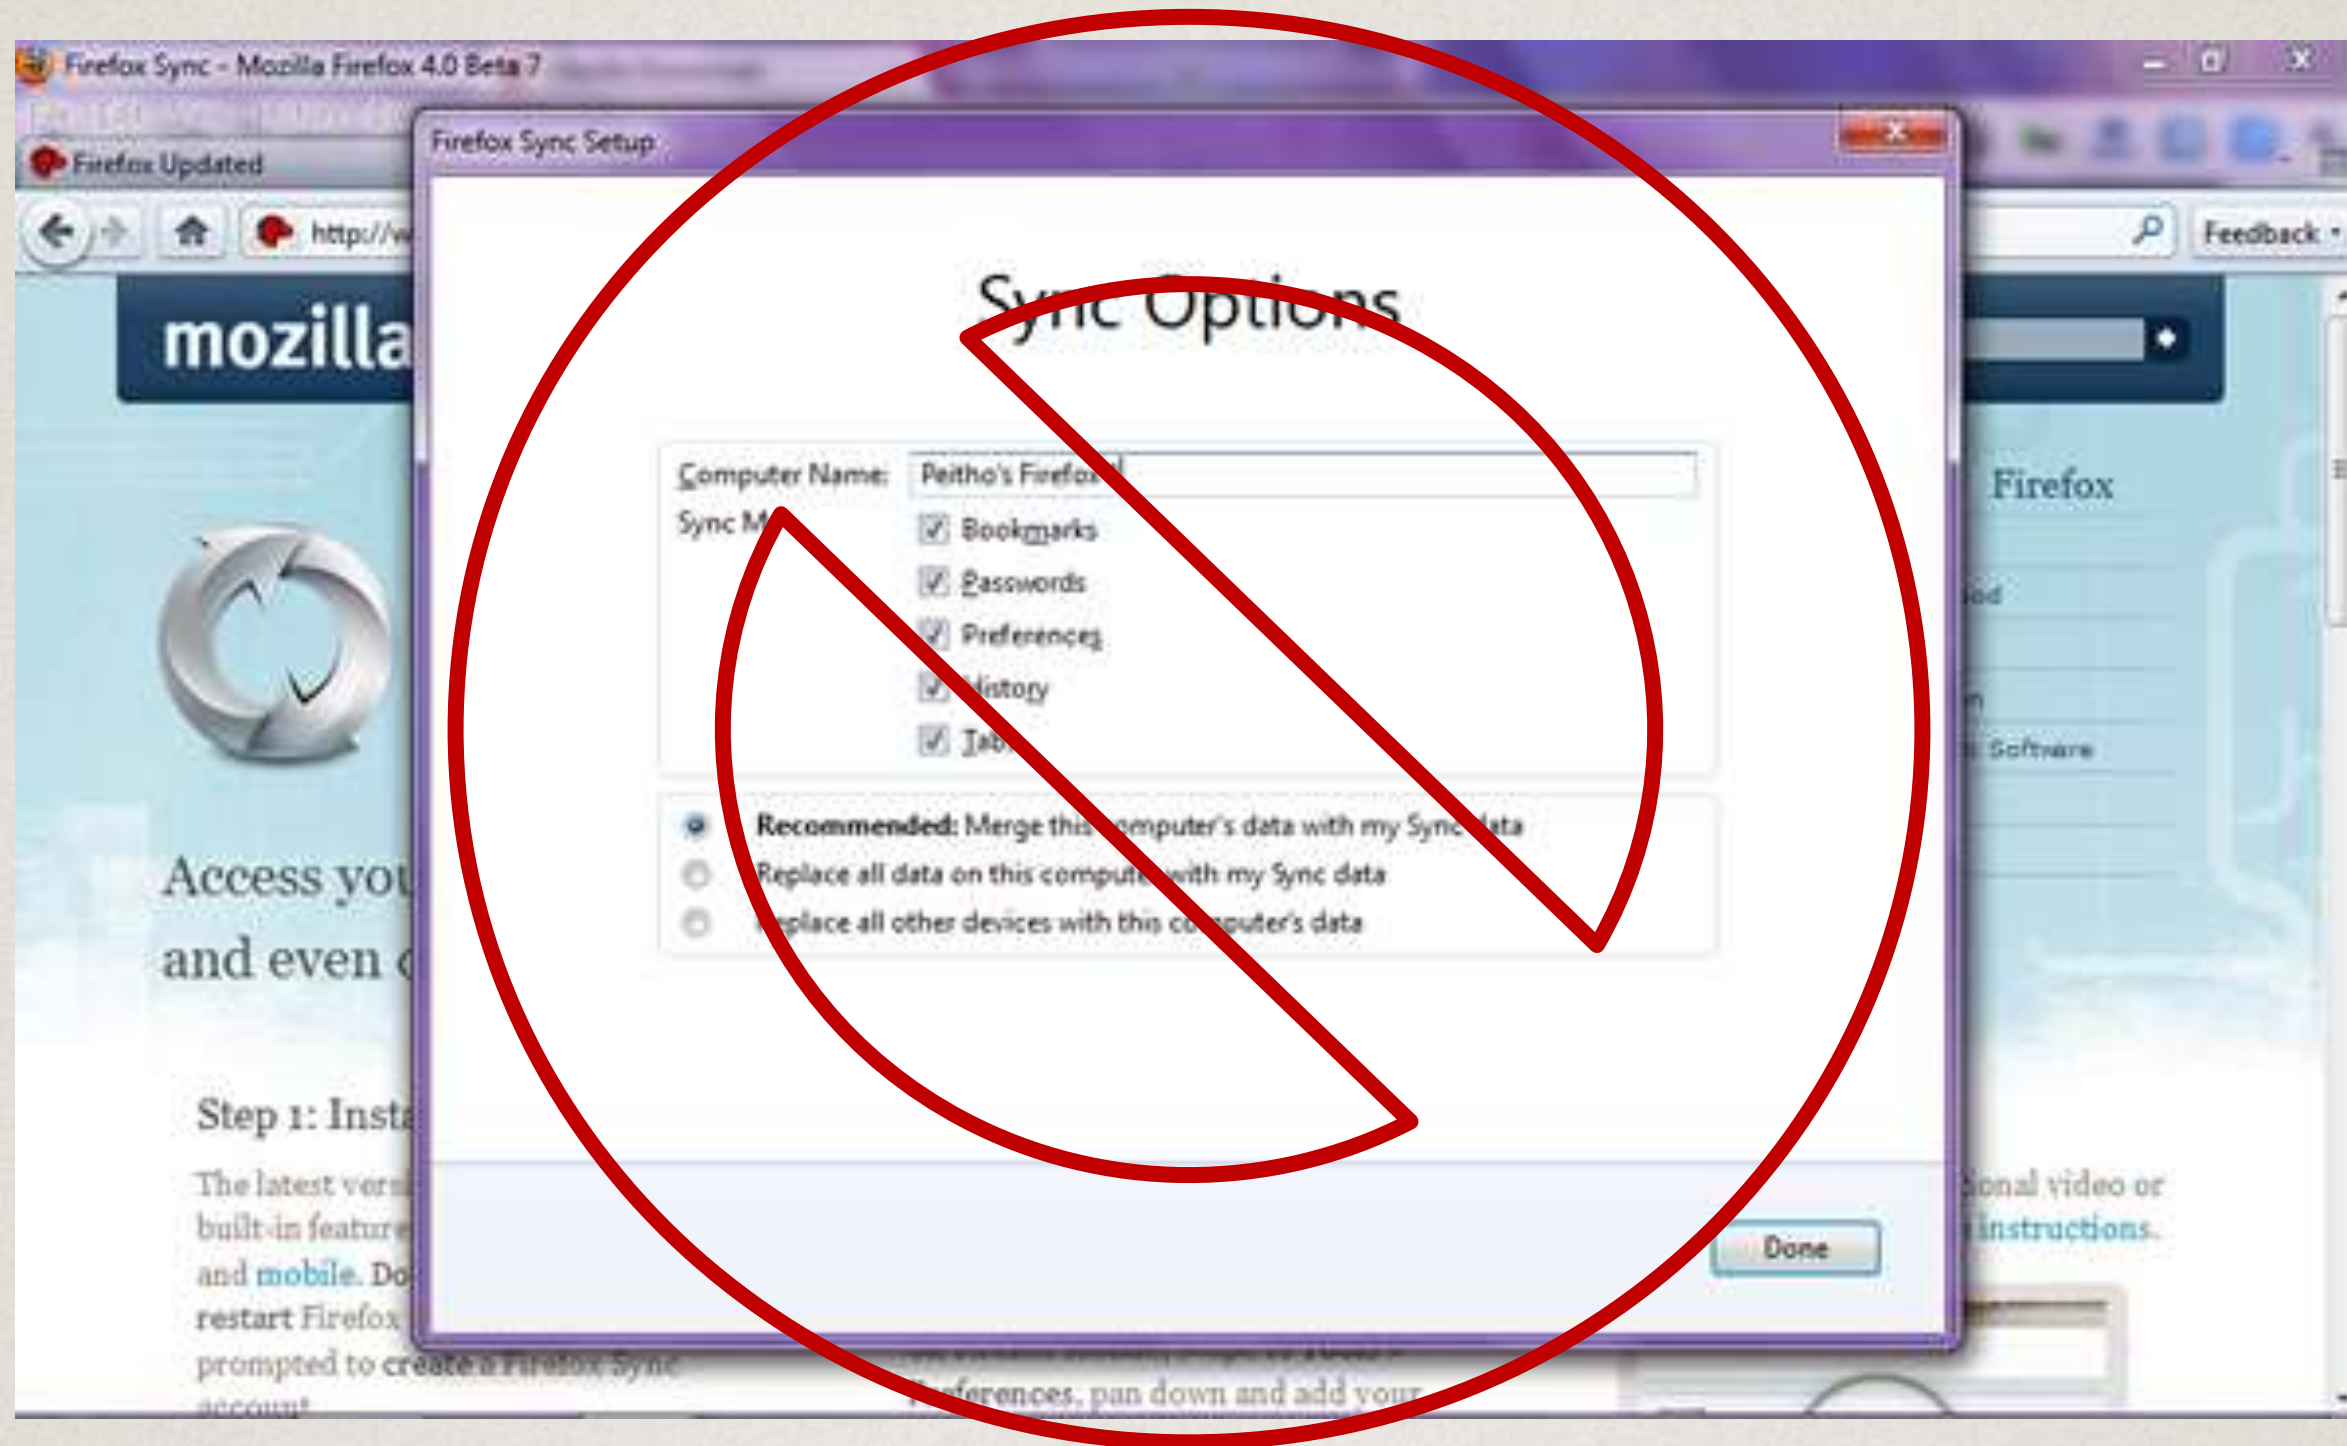

# Re-Inventing Firefox Profiles

- What if your Firefox Profile was One Stop solution in protecting your privacy.
- What if your Firefox Profile can help you seamlessly resume your work while letting others use your browser.
- What if your Firefox Profiles synced data with your Firefox Browser on Android, Firefox O/S & On other Computers .
- What if your Firefox Profile was your key to the World Wide Web.

# Introducing the new Firefox Profiles

Eliminate extra work and confusion.

# Introducing the new Firefox Profiles

A screenshot of the Firefox Profile Setup window. At the top left is the Firefox logo, and at the top right is a close button (X). Below the logo is a profile picture placeholder (a white circle on a dark background) with a camera icon in the bottom right corner. To the right of the placeholder are three input fields labeled "Profile Name", "Password", and "E-Mail ID". Below the "E-Mail ID" field is a blue link that says "Get Help.". At the bottom left, there is a line of text: "All your **Profile Data** is only stored locally, unless Firefox Sync is **Enabled**.". At the bottom right is a circular button with a right-pointing arrow.

Firefox

Profile Name

Password

E-Mail ID

[Get Help.](#)

All your **Profile Data** is only stored locally, unless Firefox Sync is **Enabled**.

→

Have your Personal Firefox Profile  
do all the job for you.

# Introducing the new Firefox Profiles

Share your Browsers with others.  
But its still yours.

# Introducing the new Firefox Profiles

Each and everyone who share your browser can have their data roam in cloud.

# Why & How is the new Firefox Profile better ?

- Your e-mail id / persona login will be the key to your browser.
- Simple Choice for Sync which automatically knows what to sync and what not to.
- Easy Backup & Restore options for Local Firefox Profiles to facilitate portability.
- **Always protect and resume your work where ever you left it before.**
- **Other people who use your browser have their own browser workspace and they can have privacy.**

# How can it Help Developers ?

- It provides a better place for add-on developers to test their add-ons.
- Web developers would like to have different profiles to sync their personal form info and passwords.
- Firefox add-ons can be easily get converted to Firefox O/S apps and get data synced.

Now there is one less worry about **PRIVACY**.

Firefox is and will be the only browser  
which gives the users their full privacy.

Thank You !!!  
Happy Browsing !!!
