Example with XML textfields

Name

First Name

Step by step

1. create new XML formuar document in OpenOffice.org
2. insert textfields into the document
3. edit textfield properties, setting font to ARIAL, standard, 12pt
4. export document as PDF
5. open PDF file to enter text into the formfields
6. see result below
7. further tests:
   1. changing font or paragraph settings don't work, same result as shown below
   2. changing PDF export to FDF or XML has no effect
   3. changing size of textfield has no effect on positioning the text

Result after entering data into the XML form fields

The text is cut off at the bottumn, so that this form cant't be used for PDF export.
