

Beispiel 1 $f_1(x) = \frac{1}{2}(x+1)(x-2)^3 = \frac{1}{2}x^4 - \frac{5}{2}x^3 + 3x^2 + 2x - 4$

Beispiel 2 $f_2(x) = -\frac{1}{4}(x+2)^2(x-4) = -\frac{1}{4}x^3 + 3x + 4$
