

Please first make such a directory:

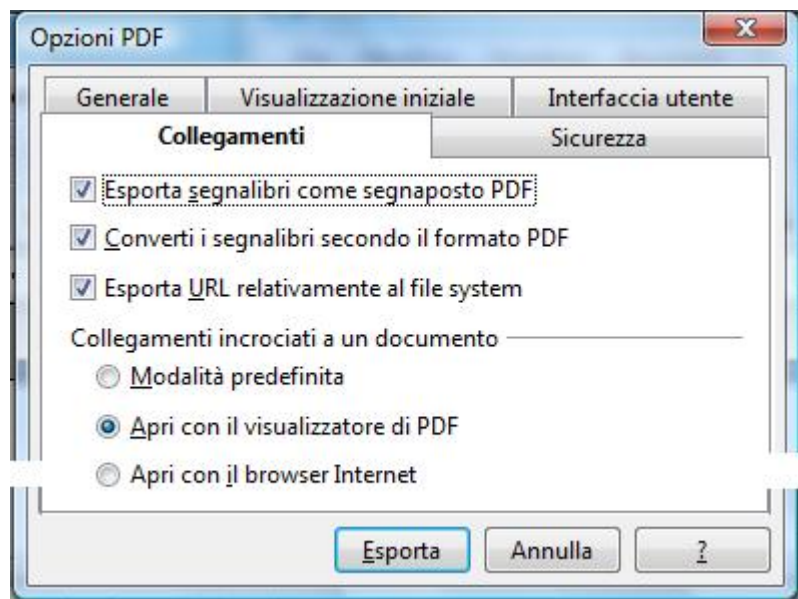

C:\OOLinksPDF
a.txt
à.txt
links.odt
links.pdf

Bug

Links that contain unusual characters work in OpenOffice, but do not work in PDF print.

[a.txt](#) work
[à.txt](#) do not work in PDF

Also, unchecking third option, links do not work in PDF.

Other:

- Unchecking first and second options, nothing changes.
- The first and the third radio button appear to have the same functionality.
- Links are relative in OpenOffice, but setting menu show full path.
