$f(x)=e^{-0.1x}\cos(x)$

$f(x)=e^{-0.1x}\cos(x)$

The top formula has been converted to curves so
that it can be reduced to any size easily.

Look at the PDF output (3200%) and compare the top
with the bottom formula which uses fonts.

The top one is deformed.

$f(x)=e^{-0.1x}\cos(x)$

The problem also occurs
without any reduction
in size
