

How the top line of table is missing in pdf

Problem: When this file is converted into pdf, the top border line of the table goes missing! The article looks fairly OK in odt, but its pdf conversion looks very bad.

Cause: The paragraph just before the table has a 0 setting for its “spacing below paragraph” property. (The problem can be resolved when this paragraph setting has a non-zero value for its “spacing below paragraph” parameter.)

Desired: The top line of the table must not be cut in pdf. The user should not have to remember that he has to set the paragraph's property in a certain way.
