

Tab fill character distribution bug

This document was created using OpenOffice.org Writer 2.2.0 on Microsoft Windows.

Alpha.....	1
Beta.....	2
Gamma.....	3
Delta.....	4
Epsilon.....	5

Although the fill characters look fine in Writer, in the PDF created by File > "Export as PDF" they are not evenly distributed. Sometimes there are extra gaps between some of the dots; at other times some dots are unevenly bunched up closer to each other.

The problem became apparent when the font was changed to Verdana (in the Default paragraph style). It wasn't visible when using the default Times New Roman font.
