Introduction:

http://www.oooforum.org/forum/viewtopic.phtml?p=231016#231016

How do i print a document in booklet and duplex mode from a document that has multiple portrait and landscape orientated pages with oowriter?

Problem:

The portrait pages are going fine. However the landscape pages are printed portrait orientated and not landscape. It doesn't spread out over its selected area on the paper sheet.

So how can we get the landscape pages printed in landscape when printing a brochure?

I would really like to see a solution with oowriter, so i can print brochures from normal documents directly with oowriter.

The process:

See the openoffice.org internal help for more info:

Step 1:
Create a document with mixed portrait and landscape pages like this document

Step2:
File -> Printer settings -> Select printer (pdf virtual printer)
File -> Printer settings -> Properties ->
Paper Size : A4
Orientation: Landscape
Duplex: Short Edge
Paper Tray: Tray 1

Step 3:
File -> Print option -> Column: Pages -> Check: brochure, left page and right page
Print to file -> test.ps
