Filelist.pdf	08-04-08 10:21	Ferry Toth	Product X	Product Documentation Package	1	Checked: FT Approved: FT	
File Path2\							
Naam	Gewijzigd op	Auteur	Titel	Onderwerp	Pagina's	Opmerkingen	Keywords
Doc 2.pdf	08-04-08 10:05	Ferry Toth	Product Documentation Template	Document Type	1	Checked xx Approved xx	

Instructions:

We generate the file: filelist.html with a homegrown piece of software that scan the folder and it's sub folders and takes the properties from the files (using ShellAPI, so it works under Windows only).

filelist.html is included here as a section. To update it you need to goto <Edit><Link>

(Writer will skr*w up the table a bit, you need to set Table alignment to automatic again to have the table fit on the page after this).

I export this document using export links "open with PDF reader, url's relative).

In the pdf using Acrobat Reader 8 the link to Doc 1 and Doc 2 is broken.

Reason: the following code is inside the pdf:

```
130 0 obj
<</Type/Annot/Subtype/Link/Border[0 0 0]/Rect[32 770.6 67.7 779.8]/A<</Type/Action/S/GoToR/F(./Doc%201.pdf)>>
/StructParent 1>>
endobj

131 0 obj
<</Type/Annot/Subtype/Link/Border[0 0 0]/Rect[32 722.6 67.7 731.8]/A<</Type/Action/S/GoToR/F(./File
%20Path2/Doc%202.pdf)>>
/StructParent 3>>
endobj

132 0 obj
<</Type/Annot/Subtype/Link/Border[0 0 0]/Rect[32 758.6 69.5 767.8]/A<</Type/Action/S/GoToR/F(Filelist.pdf)>>
/StructParent 2>>
endobj
```

Note the difference between Filelist and Doc 1 (both in the same folder).
