

OOO 3.0 accessing a dialog object error

close doc without saving

save doc as template_print & close

Export doc as Excel

The buttons below were created by the master macro. They will not print - although they are set to be printable. To print them, save & close the template doc and re-open it.

If this doc gets opened from another doc by macro, accessing a dialog object will cause an OOO 3.0 Basic runtime error (click on 'Export doc as Excel')

If you directly open this doc from the file system, there will be no error when clicking on 'Export doc as Excel'.

Another error is that OOO always crashes after exporting a sheet to Excel (also in prior versions and regardless of the way how the file gets opened).
