A Q&D HowTo

1. Install Perl if you don't have it yet (or have someone else install it for you).

2. Open any convenient text editor (not a word processor!) and type your program:

   ```
   #! perl
   print("Hello, world!\n");
   ```

3. Save your program as "hello.pl".

4. Open a command line.

5. Type

   ```
   perl hello.pl
   ```

6. Profit!
