

Formula outline problem.

OpenOffice Impress, Ooo m40, Windows Vista

- 1) Open Ooo m40 and make a new Impress file,
- 2) insert a formula object (Insert >Object > Formula),
- 3) select the object and select no outline,
- 4) save the file to disk,
- 5) close the Ooo application,
- 6) reopen the Ooo application with the formula Impress file.
- 7) Do the formula object have an outline or not?

Here is how it looks like on my system.

Screen capture from Impress m40 after the outline around the formula is removed – and after the file Formula_OOo_m40.odp is saved to disk:

Screen capture right after the file Formula_OOo_m40.odp is reopened. The outline is back!
