

MyNIAID

Sprint 1 Wireframes - Change Request

April 23, 2015

Design Tenets

Three design tenets will guide the design of MyNIAID

Scannable

Each view of MyNIAID should be scannable so that the user can quickly ascertain what the most important information on the page is.

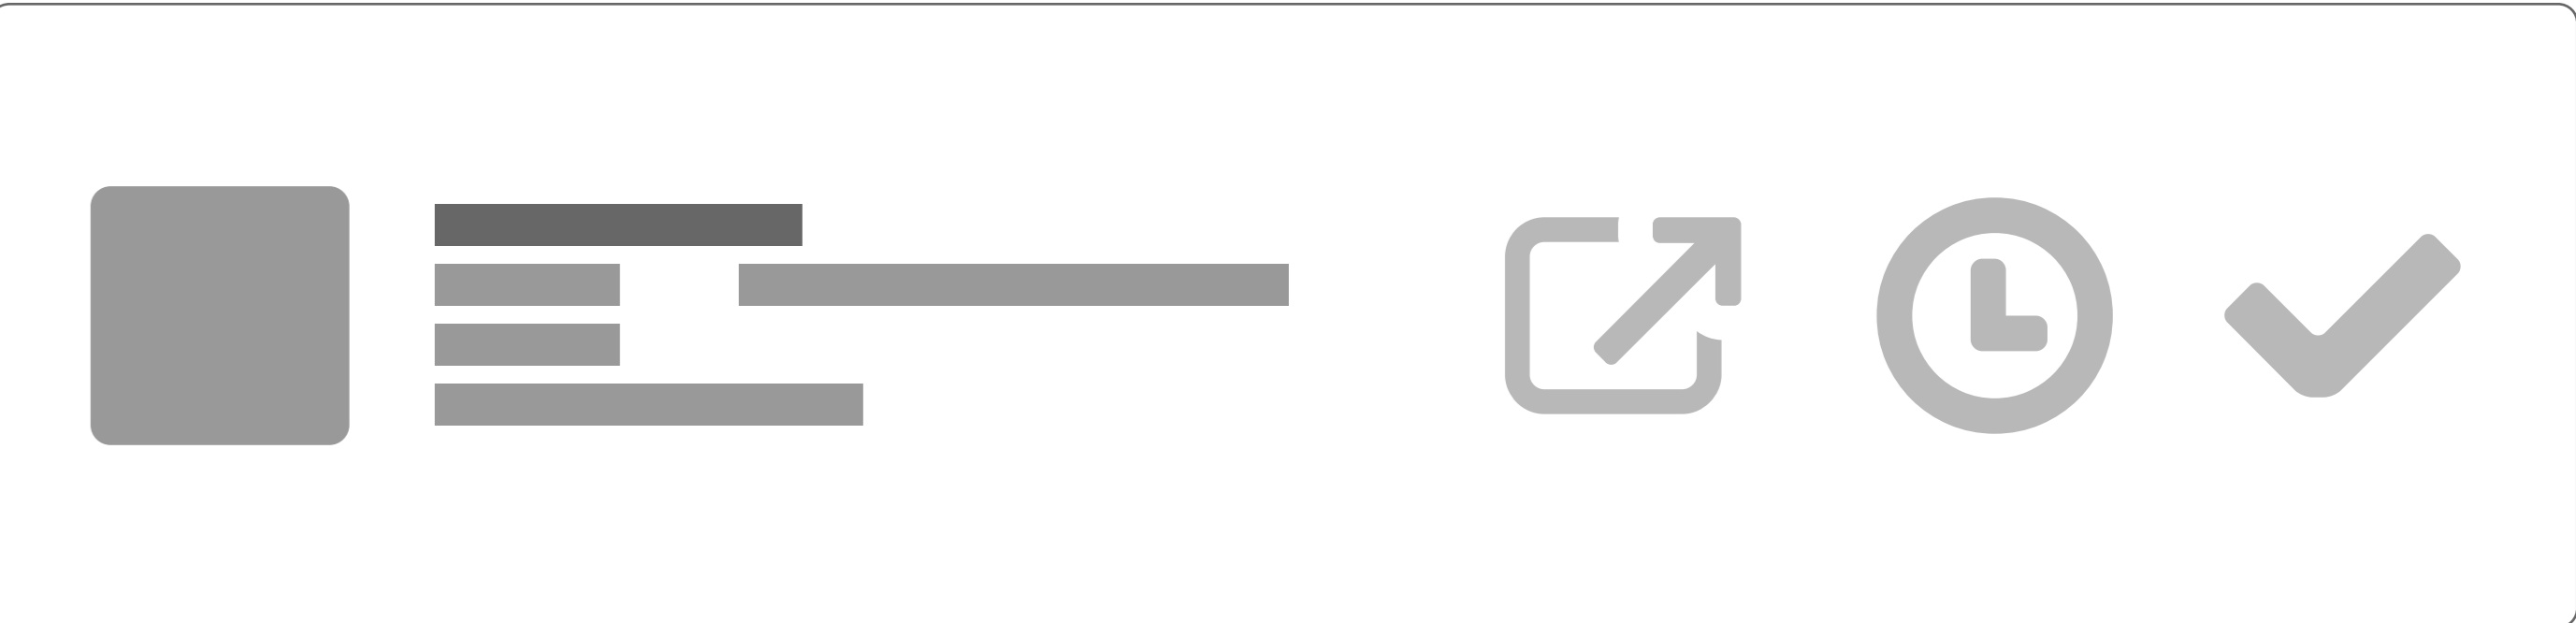

Responsive

We are designing with responsiveness in mind, so that MyNIAID can be used seamlessly across devices.

Quick Actions

User should be able to quickly and easily take action on items.

MyNIAID – Web View

NIAID-WF-351**MENU**

Main navigation appears on all pages and allows access to Notifications, Favorites, App Catalog and profile.

REFRESH

On click, the list of notifications is updated (if new ones are found). The timestamp next to the icon indicates the last time the items were updated.

DEFAULT SORT

By default, items are displayed by source.

TRY IT: Click to view menu options

TRY IT: Click to snooze item

TRY IT: Click to dismiss item

ITEM ACTIONS

Three actions are available for each item:

- Go to Source Application
- Snooze
- Dismiss

ITEM DETAILS

Each item displays the following information:

- Name of source application
- Description (Display up to 140 characters by default; show up to 255 characters on "view more")
- Due Date (if available)

VIEW MORE/VIEW LESS

Notification descriptions should display up to 140 characters by default. If there are more than 140 characters in the description, "view more" should be displayed. On click, "view more" displays additional description text (255 characters max). When expanded, "view less" appears. On click of "view less", the description collapses and returns to the default state.

PAGINATION

Ten items will be displayed on each page.

TRY IT: Click menu items for different views (this works on all pages)

User has clicked on Compliance filter.

USER NAME
User's name appears. On click, menu opens up for user to go to Subscriptions and Important Contacts.

FILTER BEHAVIOR
By default, all types, sources, and priorities are displayed. A user can choose to filter the list of items by clicking on a row within each facet. When a user clicks on a row to filter by, the row is highlighted. The user can only choose one within each bucket.

When filtering by type, the label updates to indicate the number and type of items that are being displayed.

The number next to the un-selected filter is removed, since none of those items are being displayed.

The numbers in adjacent facets are updated once a filter has been chosen.

User has clicked on Notifications filter.

User has clicks on the Sort By menu and reveals their options for sorting.

- TYPE**
 Order things should be displayed if by type:
- Type - Compliance, Notifications
- Within each type, display in the following order:
- Due Date (closest to farthest)
 - Source (alphabetical)
 - Title (alphabetical)
- TRY IT:** Click to view items sorted by priority
- SOURCE**
 If user sorts by source, items appear alphabetical order by source. If there are multiple items from a single source, the items should be sorted in following order:
- Type (Compliance, Notifications)
 - Due Date (closest to farthest)
 - Title (alphabetical)
- DUE DATE**
 If user sorts by priority, items are displayed in the following order:
- Overdue
 - Due Soon
 - Upcoming
 - Not Provided
- If there are multiple items for a due date, the items should then be sorted by:
- Type (Compliance, Notifications)
 - Source (alphabetical)
 - Title (alphabetical)

User has sorted items by due date.

ITEM COUNT

If user filters by due date or source, the item count updates to show X of X items are displayed.

ADJACENT FACETS

When a user filters in one facet, the counts in the other facets update. A user can filter across multiple facets at the same time (e.g. filter by type AND due date).

TRY IT: Click to add filters back in

DEFAULT

By default, all items within a filter type are displayed.

Type

- All
- Compliance 0
- Notifications 9

FILTER SELECTED

When user selects a facet, the state changes to indicate the facet that is selected. The facets that were not selected change state to indicate that they are not being displayed. The numbers should be displayed whether the facet is active or not. User can only select one at a time. If there are zero items in a facet, the item should be displayed with a 0 next to it.

User clicked on snooze icon.

SNOOZE OPTIONS

User chooses a date to snooze until from a date picker. Important states:

- Dates in past - Not selectable
- Dates in future - Selectable
- Selected Date - should be highlighted

User clicks arrows to move across months.

TRY IT: Click to snooze item until next week

NIAID-WF-359

ACTIVE (44)

44 active items

Sort by: Type

Snoozed until Mar 13

UNDO

X

NUMBER OF ITEMS

After snoozing an item, the active items number is updated to reflect that an item has been snoozed. A number also appears next to the Snoozed tab item.

TRY IT: Click to dismiss message prior to it disappearing by itself

TRY IT: Click to undo snooze

SNOOZE MESSAGE

After a user chooses how long they want to snooze, the item disappears and a message appears in its place. The snoozed message indicates the date (e.g. Mar 13) that the item will be snoozed until.

UNDO

On click, undo removes the message and the item that was snoozed reappears in the Active list.

CLOSE

On click, close dismisses the message. The item remains in the Snoozed tab. If the user does not dismiss the message after 3 seconds, it will automatically disappear.
