》 ONEPEN™ SOLUTION
Supports the most numerous and widely used document creation software using the same OnePen solution

》 OUT-OF-THE-BOX SUPPORT
Doesn't change the way you work or require additional hardware, software or programming

silanis

Approve**It**™

ApproveIt software from Silanis enables your organization to capture legally binding, electronic signature approvals at the speed of the Internet. By combining secure, electronic signature capabilities with advanced approval management features, **ApproveIt** automates complex signing processes and maintains document authenticity throughout a business approval process. You can capture a customer or trading partner's electronic signature on the Web, in an application form, legal contract, or spreadsheet, and then route the document electronically for additional signature approvals. **ApproveIt** offers a mature and complete software solution that Web-enables your business processes and improves your bottom line today.

ePERSONA™ SIGNATURE FILE

Safe signing is made possible with your ePersona signature file which is created using industry standard FIPS algorithms and unlocked each time you enter your private password.
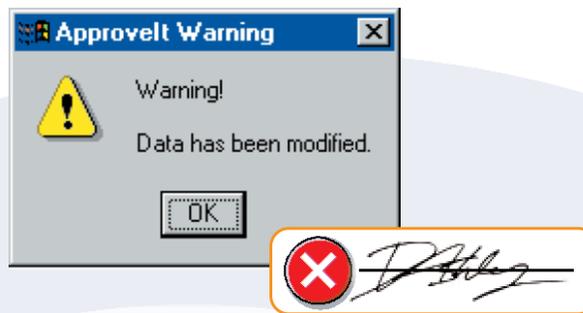

USER AUTHENTICATION

ApproveIt references a person's self-signed or 3rd party x.509 v3 digital certificate in the electronic signature to verify the digital identity of each signer.
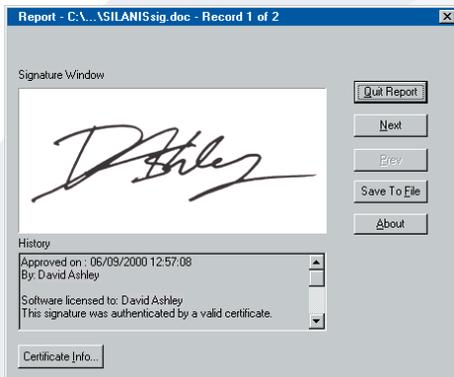

DOCUMENT AUTHENTICATION

ApproveIt permanently embeds the electronic signature to the contents of a document. Each time the document is opened, **ApproveIt** verifies whether the document is authentic or has been changed. If a change is detected, **ApproveIt** visibly invalidates the signature.

AUDIT TRAIL

A permanent history of the approval process is recorded in the electronic signature including who signed the document, when it was signed, what section was signed and how.
