Report

Issue 01.2018
Topic **Application RASVPN for Externals (NC5)**
Description Service Key SK-00-C2-045 RASVPN for Externals - ExtRAS

Terms of conditions for the external partner

Confirmation of the security measures

(please confirm by checking all options)

- It is guaranteed that an active and up-to-date virus protection is up and running on the PC.
- The PC operating system is up-to-date with regards to security hotfixes and patches of the manufacturer.
- The Client PC is protected against unauthorized access from other networks at any time, e.g. by a firewall. Split Tunneling is not used and may be actively prevented if switched on.

In case you lose your Secur ID-Card (aka Token), please immediately inform the CI Hotline calling **+49 (711) 811-3311**

Monitoring of external access

The monitoring of external access is done by a network based system that gets access to every administrative traffic like WTS (Windows Terminal Services), VNC (Virtual Network Computer), SSH (Secure Shell) or Telnet. This kind of traffic is monitored and recorded. The recording is network based, so no software has to be installed neither on client side nor on server side. For further information please refer to our infosheet for external access, you get that either as part of the ordering process or get it from your internal bosch partner.
