BIC code / Swift nr. RABONL2U

VAT nr. NL814989160B01

**19.** When DigiDocFlow is connected to the server your triggers will be displayed in the emulator and you can use the buttons as you or a user should do on a real Ricoh device.

**20.** In the standard configuration of the emulator there can be made a virtual scan, but the best way to demonstrate a scan is to let the emulator look at a TIFF file of a dummy invoice. To change the virtual scan go (in the upper left corner) to "settings" → "Scan File Settings" → "Tiff Settings". There you can select the TIFF file that will be virtually scanned. The scanned TIFF file will be processed by DigiDocFlow to a searchable PDF file and stored on the location as you have defined in DigiDocFlow.
