Unfortunately, I get the error:</p> <p>Webmin failed to get the version of your Samba server executable /usr/sbin/smbd. Check your module configuration to make sure this is the correct path.</p> <p>The path is correct. I am using Webmin 1.210 on Fedora Core 4. Samba executable is in proper place and running <code>smbd -V</code> reports Version 3.0.14a-2</p> <p>I've searched around and can't find anything current - this was apparently a problem in earlier versions when samba changed to upper case V, but should have been resolved.</p> <p>Thank you.</p> <p>Back to top profile pm</p>
