# Scenario 1: Create a project with a user that has only _member rights

In Horizon, logged in as "Admin", I did the following:
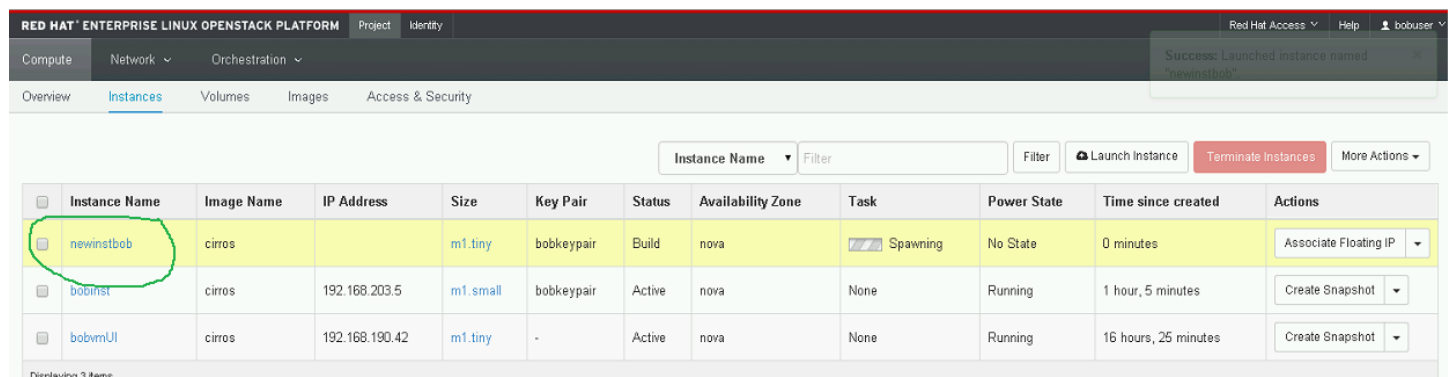

1. Created a project/tenant, "bobproj".
2. Created a user, "bobuser" with only _member rights and added this user to bobproj.

Launching an instance for bobproj:

1. **When I log into Horizon as "bobuser", I can launch an instance: I can see this new instance, "newinstbob" in Horizon as both users, Admin and bobuser.**
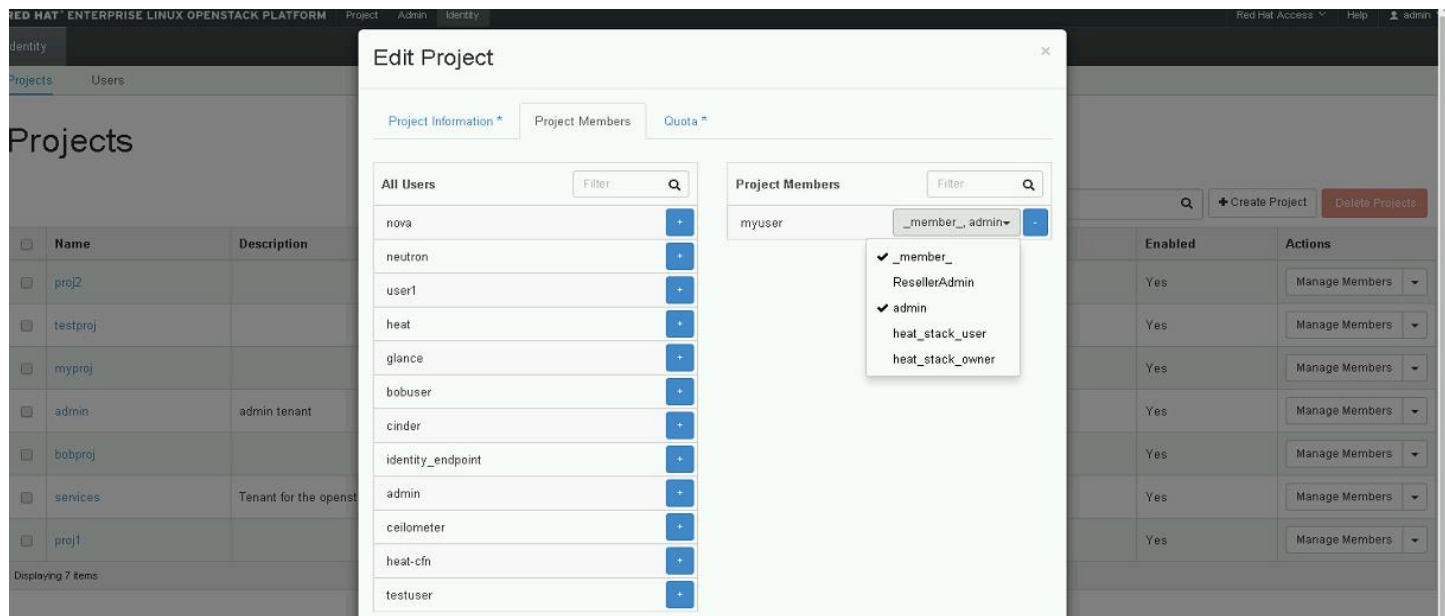

Scenario 2: Create a project with a user that has _member_admin rights

In Horizon, logged in as "Admin", I did the following:

1. Created a project/tenant, "myproj".
2. Created a user, "myuser" with _member_admin rights and added this user to myproj.

Launching an instance for myproj:

1. **When I log into Horizon as "myuser", I can't launch an instance:** <mark>- it is asking for a project name and there is nothing in the dropdown the you can't type in that field. - This is the bug</mark>
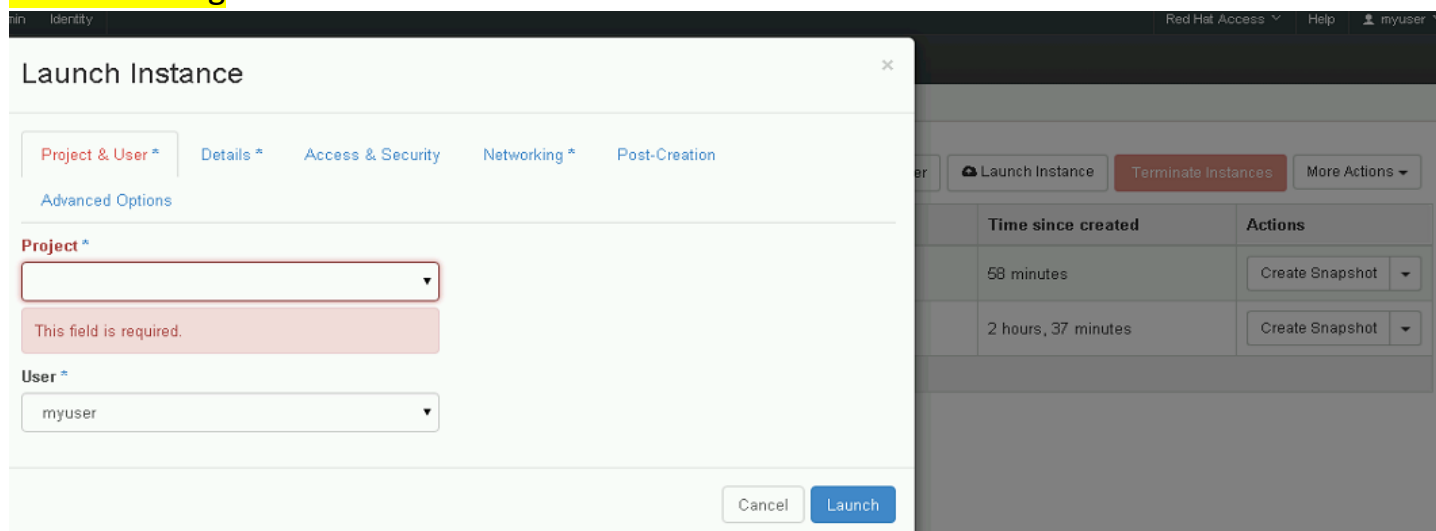

2. **In CLI as "myuser", I can launch an instance:**

```
[root@controller03 ~(openstack_myuser)]# nova boot --flavor 2 --key_name mykeypair --image 810f223d-6603-4c75-bc1a-
