Hi all!

Our CI Job (OSP14) fails on introspection, it used to be OK in the past, so it seems like something was changed since then.

The host Job is running on is: titan64.lab.eng.tlv2.redhat.com Password: 1-8

From Undercloud logs it looks like the root cause is this ERROR:

```
----- LogPath:/var/log/containers/mistral/executor.log-----
IsTracebackBlock:True
BlockTuple:(11938, 11944)
UniqueCounter:15
BlockLinesSize:6
mistral.executors.default_executor Traceback (most recent call last):
mistral.executors.default_executor File "/usr/lib/python2.7/site-packages/mistral/executors/default_executor.py", line

mistral.executors.default_executor result = action.run(action_ctx)
mistral.executors.default_executor File "/usr/lib/python2.7/site-packages/mistral/actions/openstack/base.py", line 130,
in run
mistral.executors.default_executor (self.__class__.__name__, self.client_method_name, str(e))
mistral.executors.default_executor ActionException: BaremetalIntrospectionAction.wait_for_finish failed: Unable to
establish connection to https://192.168.24.2:13050/v1/introspection/f7340e07-a1b5-4519-811f-8e93f2681592:
('Connection aborted.', BadStatusLine(''))
```

Can you please take a look?

Thanks!

I suspect that this error isn't the problem and it more likely the switch config,

When I reboot the "compute-1" vm on your host while looking for dhcp requests on the undercloud I see nothing at all. So the nic compute-1 is using for PXE doesn't appear to be on the same network as the undercloud provisioning network.

I managed to get onto the switch (config here[1]), em5 on the switch is the nic connected to comp1vqfx0 but I can't figure out how to map that to xe-0/0/X so I don't know which interface config I should be looking at but iirc for introspection to work its native-vlan should be the same as what ever interface maps to em6 (unde0vqfx0)

Also I don't see any juniper switch config details on the undercloud, I'm not familiar with what your job is testing but are you expecting the undercloud neutron to be configuring the switch? If so I guess its missing some neutron configs
