Running the virtual machine wizard to create a virtual machine

Step2: Click **Create Virtual Machine** and select **Create with Wizard**.

It's "New with the Wizard" on the UI, not "Create with Wizard". It might be changed after https://bugzilla.redhat.com/show_bug.cgi?id=1776062 is fixed.

"Remove" in Step 4&5 should be "Delete" according to the UI.

Virtual machine wizard fields

"Attach disk" should be "Disk" and move to "Parameter" of "Source".

Workload Profile:

Server Description (**QE - can you please provide a description for this workload profile option?**)

[@Tomas Jelinek](#) Could you provides a description for server ? I bet you have a good understanding of it.

"generic" **QE - Please Confirm - this option can be deleted from here because it is not available in the new UI?**

"generic" can be removed, it's not available on UI.

"Create new template from configuration"

[@Tomas Jelinek](#) this is not for 2.2, right?

Networking fields

The first 2 fields are not correct, below are my suggestions:

Name Name for the Network interface.

Model Driver for the Network interface or Model for the Network interfac. (or a better description, from the list they're network drivers.)

Storage fields

"Source", I'm not sure about the ISO related, [@Tomas Jelinek](#) [@Radim Hrazdil](#) Do we have this functionality in 2.2 or it's a new feature in 2.3?

"Name of the interface." can be enhanced

"Name of the underlying StorageClass." can be enhanced

"Bootable Disk" is not a storage fields, should be removed or place it somewhere else.

Pasting in a pre-configured YAML file to create a virtual machine

Click **Create Virtual Machine** and select **Create from YAML**

it's "New from YAML".
