

- In AbiWord I selected the font Helvetica
- I pressed the buttons for bold, italic, then both.
- I have the genuine Adobe Type 1 fonts installed.
- hv____.pfb hvb____.pfb hvbo____.pfb hvo____.pfb

Helvetica

Helvetica Bold

Helvetica Italic

Helvetica Bold Italic

- In AbiWord I selected each font individually - as they are listed
- as different families. Gnome Font Viewer shows the family exactly
- as typed below and sees the face as roman.

Helvetica LT

Helvetica LT Bold

Helvetica LT Oblique

Helvetica LT BoldOblique

- In AbiWord I selected the font Nimbus Sans L
- which is suppose to be the metric matching equivalent of Helvetica.
- Yet looking at what is produced - it seems fontconfig isn't getting the
- metrics correct. I know for a fact it use to. Maybe it's using narrow metrics?
- Anyway - after selecting the font, I pressed bold button in Abiword, then
- italic, then both.

Helvetica Bold via Nimbus Sans L

Helvetica Italic via Nimbus Sans L

Helvetica Bold Italic via Nimbus Sans L

- This is Arial from MS core web fonts. After selecting Arial - I did the
- bold, italic, then bold and italic song and dance.
