In this article we are reviewing the ATI Radeon HD 5450 "Cedar" graphics card, which is AMD's lowest-end Evergreen GPU but will set you back less than \$50 USD.</div> <div>ATI R600 Classic Mesa 7.9 Performance</div> <div>October 01, 2010 -- As we have talked about in numerous articles now and delivered various benchmarks for different graphics processors from those using a classic Mesa DRI driver to the newer NVIDIA/ATI hardware with Gallium3D support, Mesa 7.9 brings a lot to the table. There are many new features to be found in Mesa 7.9 for all drivers, but in this article, we are specifically looking to see how the OpenGL performance of the classic R600 driver has changed compared to Mesa 7.7 and Mesa 7.8.</div> <div>Is Fedora's Boot Time Increasing?</div> <div>September 29, 2010 -- The last time we closely examined the boot performance of Fedora Linux was in 2008 when comparing the boot times from Fedora Core 4 through Fedora 8. However, with more distributions taking pride in recent months over shortening their boot time -- with Canonical for example having worked towards a ten second Ubuntu boot time -- we decided to see how long it's taking Fedora to put its hat on these days. With the three Intel notebooks we used from our recent Fedora power consumption review, we measured the boot times using Bootchart on the Fedora 10, 11, 12, 13, and 14 Alpha releases.</div> <div>Intel Mesa 7.9 Benchmarks</div> <div>September 27, 2010 -- With Mesa 7.9 just around the corner and it sporting a new GLSL compiler, support for new OpenGL extensions, and months worth of other changes to core Mesa and its drivers, we decided to run some benchmarks of the latest Intel Arrandale graphics processor with the past few Mesa releases to see how the performance compares. We also have ATI and Nouveau Mesa benchmarks on the way.</div> <div>Running An Encrypted LVM In Ubuntu 10.10</div> <div>September 25, 2010 -- Back with Ubuntu 7.10 an option was added to Ubuntu's alternate CD installer to easily setup an encrypted LVM during the Ubuntu installation process. This would better protect your personal data in the case your laptop or mobile device was ever stolen or misplaced as the Ubuntu Linux installation cannot boot if the encrypted LVM cannot be mounted with the encryption pass-phrase. Of course, encrypting the entire root partition can cause a performance penalty as some of our earlier results have shown while introduced in Ubuntu 9.04 was support for home encryption where only your SWAP and home folder is encrypted and this is done using eCryptfs. This continues to be Canonical's preferred method of encrypting user data with it being available from the standard Ubuntu installer while even three years later only the install-time encrypted LVM support can be accessed from their alternate installer. For those serious about encrypting their disk drive on Linux, we have new benchmarks from Ubuntu 10.10 showing how an encrypted LVM will affect your file-system performance.</div> <div>Is Linux Power Management Getting Better Or Worse?</div> <div>September 23, 2010 -- With three laptops representing different generations of mobile hardware, we loaded up the past four stable releases of Fedora Linux plus the most recent Fedora 14 Alpha release and then carried out an arsenal of tests looking at how the battery power consumption rate has changed since 2008. If you are concerned at all about running Linux on your battery-powered mobile devices, this article is worth reading.</div> <div>Direct3D 10/11 Is Now Natively Implemented On Linux!</div> <div>September 21, 2010 -- It's a pity Luca Barbieri or any Mesa / Gallium3D developers are not at Oktoberfest as they are deserving of more than a few Maß of Augustiner. In fact, today a new Gallium3D state tracker was pushed into Mesa and it's perhaps the most interesting state tracker for this open-source graphics driver architecture yet. It's a state tracker that exposes Microsoft's DirectX 10/11 API on Linux! And it's already working and can be hooked into Wine!</div> <div>2010 XDS Toulouse</div> <div>September 20, 2010 -- The X.Org Developers' Summit in Toulouse finished up over the weekend. It is now time for PhoronixFest at Oktoberfest in Munich, but here is a recap of what was discussed at this French X.Org event along with some photos.</div> <div>Mesa 7.4 Through Mesa 7.9 Benchmarks</div> <div>September 17, 2010 -- Over the next few weeks there are a number of new Phoronix benchmarks to be published concerning the performance of Mesa 7.9 for both the Mesa classic and Gallium3D drivers from the different GPU vendors. Included in those tests will be new Intel Mesa benchmarks of their only officially supported 3D driver using one of the Arrandale processors, but for those currently</div>	<div>Advertisement</div> <div>Latest Phoronix News</div> <div>Mesa 7.9 Has Now Been Released</div> <div>October 04 - YES!</div> <div>Enlightenment Foundation Libraries 1.0 Hit Beta</div> <div>October 03 - EFL 1.0 Goes Beta</div> <div>GCC 4.4.5 Brings Bug-Fixes</div> <div>October 03 - Nothing Too Exciting</div> <div>X.Org Server 1.9.1 Is Approaching; RC1 Released</div> <div>October 03 - Point Release</div> <div>Observations On Long-Term Performance/Regression Testing</div> <div>October 02 - Regression Tracking</div> <div>Lightspark May Work Towards A Gallium3D State Tracker</div> <div>October 02 - Interesting</div> <div>Wine 1.3.4 Adds New Features, Supports ARM</div> <div>October 02 - Development Release</div> <div>GTK+3 Completes Its Rendering Clean-Up</div> <div>October 02 - GTK+ 2.91.0 Released</div> <div>Google Comes Up With Its Own Image Format: WebP</div> <div>October 01 - Better Image Compression</div> <div>Primal Carnage Says Goodbye To Unigine</div> <div>September 30 - What A Pity....</div> <div>A Sighting From Oktoberfest</div> <div>September 30 - Something New</div> <div>Hello To GNOME 2.32!</div> <div>September 29 - It's Here!</div> <div>The ATI R600g Driver Gets Boosted By A New Design</div> <div>September 29 - Many Improvements</div> <div>Linux 2.6.36-rc6 Kernel Released</div> <div>September 29 - The End Is Near</div> <div>Fedora 14 Beta Is Now Available</div> <div>September 28 - Download It Now!</div> <div>LibreOffice Is The New OpenOffice.org</div> <div>September 28 - Replacements...</div> <div>A New ATI X.Org Driver Has Been Released</div> <div>September 28 - x186-video-ati 6.13.2</div> <div>Mesa 7.9 Makes It To The Release Candidate Stage</div> <div>September 28 - It's On The Way</div> <div>More News News Archives Today's IRC</div> <div>Popular In The Forums</div> <div>AMD's UVD2-based XvBA Finally Does Something On Linux</div> <div>AMD/ATI Linux - 936 Comments</div> <div>KDE 4.5.1 rocks</div> <div>Desktop Linux - 64 Comments</div> <div>S3TC => r600{c,g}</div> <div>Open-Source AMD/ATI Linux - 68 Comments</div> <div>LL_10.04 has **not** exited low.beta status</div> <div>Desktop Linux - 40 Comments</div> <div>Questions about Eyefinity + 3 monitors</div> <div>AMD/ATI Linux - 22 Comments</div> <div>ATI Radeon HD 5450 On Linux</div> <div>Phoronix Articles / RSS Feeds - 46 Comments</div> <div>Wishlist for Porting Projects (Pt. 2)</div> <div>Gaming - 731 Comments</div> <div>Open-source CAD programs</div> <div>General Discussion - 19 Comments</div> <div>ATI R600 Gallium3D Driver Continues Advancing</div> <div>Open-Source AMD/ATI Linux - 136 Comments</div> <div>What is the best way to install ati drivers.</div> <div>AMD/ATI Linux - 13 Comments</div> <div>Enlightenment Foundation Libraries 1.0 Hit Beta</div> <div>Phoronix Articles / RSS Feeds - 13 Comments</div> <div>Steel Storm Episode I is out !!!</div> <div>Gaming - 59 Comments</div> <div>Support Phoronix When Shopping</div> <div>In addition to supporting our site through our</div>
