But the real result is very different, the arc log files generated very slowly from 18:59~20:32, until DB NODE 1 server restarted at 20:40

1.1_49632_703296551.arc generated **19:17** (18:59), it is said the server spent about **18 minutes** to write the redo log to archive log file. (**normally only need several seconds**)

2.1_49633_703296551.arc generated **19:30** (19:29), it could be treated as normal.

3.1_49634_703296551.arc generated **20:07** (19:59), it is said the server spent about **8 minutes** to generate this file

4.1_49635_703296551.arc generated **20:32** (20:29), it is said the server spent about **3 minutes** to generate this file

5.1_49636_703296551.arc generated 20:49 (20:49), it is normal.(after db node 1 reboot)

6.1_49637_703296551.arc generated 20:50 (20:50), it is normal.

All the other archive log files generated normally after dfms RAC DB node 1 reboot.
