PC Power Management Made Easy!

TaskForceCO2 makes Life Easier.

TaskForceCO2's Power Console makes it's easier to decide what power schemes to apply to what PCs or Groups of PCs.

You can adjust any power setting in seconds any clearly see what is set up. This means you are far more likely to reap the benefits of initiating Power Saving policies.

You can optionally arrange PCs within Groups to match your Power Plans, not necessarily those of your workflow.

For instance, you can easily make a group specifically for servers and apply no Power Scheme. You can add other essential PCs you never want to shut down to their own Group.

Add Multiple Power Schemes per day, per PC and you're good to go!

TaskForceCO2 reduces Waste.

When a PC is left on it can waste up to 80c per night. 80c doesn't sound a lot but if 25, 50 or 100 PCs are left on, every night of the Year, that can quickly add up to \$31,000 or more of pure waste.

Don't forget, when a PC is left on overnight on a Friday, its usually on all Weekend too. That adds another 170 plus hours of waste, per PC. When you add all the other opportunities during the day to save money, your savings can really add up.

Believe in Climate change or not, reducing CO2 reduces costs. You can't do one without the other.

Reducing your Carbon Footprint is great for your Organizations Corporate Social Responsibility program. It's also great for employees or students and great for stakeholders.

TaskForceCO2 means Saving Time.

Optional automatic wake ups get PCs ready for the start of day. This ensures no work time is wasted especially when getting lecture rooms and larger offices ready for a prompt start.

You also save by reducing the time you spend on conventional ways of controlling savings using scripts and policies. They can be time consuming and can often be difficult to maintain, modify and keep track of.

On top of that, they often get out of control or forgotten about and in many cases, out of date device drivers can prevent shut downs which is a constant source of hassle for IT but not with TaskForceCO2 in operation.

Everything in life is easier when you can see it at a glance.

Ultimate School Lifetime Just **\$995**

If Computers are left on during the day, overnight or at weekends, they are wasting Electricity. The more PCs an Organization has the more the waste. It's not a small amount either, it can easily exceed \$32 a year for every PC on a Network.

When you work it out, a PC left on from 3pm until the following morning uses 18 hours of electricity. Add weekends and that's a staggering 130 hours a week of wasted energy which equates to about \$3.90 a week.

That's a \$200 burn through a year ... and that's just 1 PC!

All Organizations need to make sure they stop wastage in its tracks and at the same time, reduce CO2. The question is – how do they go about it in the most efficient way and the answer is TaskForceCO2.

It really is the Easiest way to achieve maximum savings.

With TaskForceCO2 you can Shut down only PCs that are not logged off then Shut down PCs regardless of being logged on or off!

Multiple Power Events per PC, per day and the ability to arrange PCs by Power Management requirements, guarantee substantial savings.

Best of all, it works across all versions of Windows.

Yes, some power saving tasks could be achieved with Group Policies and Scripts. However, these require an in-depth knowledge and are time consuming to setup. With TaskForceCO2 users know all the opportunities to save resources have been taken, with the evidence to support it. All whilst spending as little time as possible messing with scripts and policies.

Without TaskForceCO2, it's impossible to know if the required power actions are prevented due to out of date device drivers or software that has not closed properly. This in turn means there would be no way of knowing how much is being saved or even if users are saving all they could be.

With full reports on average Financial and CO2 Savings it's easy to see the point an Organization reaches a return on investment ... and it's often in less than a couple of weeks.

Covers EVERY PC at your School for Life!

There is no **easier** way!

Saving Money is as Easy as 1,2,3!

1

Install

Install TaskForceCO2 on your Server. You will be up and running in seconds.

2

Apply Schemes

Design your Schemes to achieve Maximum Savings. Multiple Power events to choose from. [from.](#)

3

Save

Sit back and watch the Savings add up. With Full Reporting you know exactly when you've achieved a return on investment and you go on Saving ... for Life!
