Contents

Section 1 Introduction and Overview

Introduction and Overview	3
1 Motivation	3
2 Objectives	4
3 Participants in model development	6
4 Summary and conclusions	6
5 Impact and intentions for use	7

Section 2 Definition of Parameters Needed for Modelling and Simulation of Aluminium Alloy Corrosion in Aircraft Environments

Subsection 2a Basic Needs and Parameters for Aluminium Alloy Corrosion Modelling as Applied in the Aviation Industry **13**

1 Introduction	13
2 Relevant aircraft needs to be considered for modelling and simulation	14
2.1 Main geometrical and material input parameters for corrosion simulation	15
2.2 In-service behaviour	16
2.3 Reasonable assumptions for boundary conditions	16
2.4 Other aspects to consider in modelling and simulation	18
3 Conclusions	20

Subsection 2b Microscopic and Macroscopic Characterisation of an Aerospace Aluminium Alloy (AA2024) **23**

1 Introduction	23
2 Experimental methods	25
2.1 Al 2024 alloy composition	25
2.2 Sample preparation	25
2.3 Electrochemical measurements	25
2.4 Microstructural analysis	26

3	Results and discussion	26
3.1	Al 2024 microstructure: intermetallic particles and matrix	26
3.1.1	S and θ phase precipitates	26
3.1.2	AlCuFeMnSi (second phase) particles	27
3.1.3	Matrix	27
3.1.4	Statistical analysis of the particles	29
3.2	Al 2024 corrosion properties	31
3.2.1	Microscale electrochemical measurements (micropolarisation curves)	31
3.2.2	Difference in localised corrosion between the Al 2024 alloys (low Mg versus the more common composition)	34
3.2.3	Variation in potential values measured with micropolarisation curves	36
4	Conclusions	36

**Section 3 Modelling and Simulation of Aluminium Alloy
Corrosion in Aircraft Environments at the
Microscopic, Mesoscopic, and Macroscopic Scales**

***Subsection 3a Modelling of the Aluminium Alloy AA2024 at the
Microscale: Pitting and Intergranular Corrosion* 41**

1	Introduction	42
2	MITReM for localised corrosion of Al 2024	42
2.1	Boundary conditions	43
2.2	Onset of localised corrosion	43
2.3	Model specifications	43
2.4	Results and discussion	46
3	MTM for a deep, narrow crevice in Al 2024	48
3.1	Experimental input	50
3.2	Model geometry	50
3.3	Boundary conditions	51
3.4	Homogeneous solution chemistry	52
3.5	Results	52
3.5.1	Stationary analysis	53
3.5.2	Time-dependent analysis	54
3.6	Achievements: model benefits	55
4	Conclusions	56

***Subsection 3b Modelling of the Aluminium Alloy Al 2024 from the
Microscale to the Macroscale: Intergranular Corrosion* 59**

1	Introduction	60
2	Materials and experiment	60
2.1	Material	60
2.2	Experimental details and results	60

2.2.1	Grain boundary (GB) angle and electron backscattered diffraction (EBSD) measurements	60
2.2.2	Coupon testing	63
3	Modelling.....	64
3.1	Cellular automaton (CA) modelling approach.....	64
3.2	Model	65
3.3	Role of model parameters.....	69
3.4	Optimisation by differential evolution (DE).....	70
4	Validation of model	71
5	Conclusions	73

Subsection 3c Modelling of an Aluminium Alloy at the Mesoscale: Crevice Corrosion **77**

1	Introduction	78
1.1	Context	78
1.2	State of the art of aluminium corrosion in confined media	79
2	Simulation approach	81
2.1	Mathematical background	81
2.2	Chemical and electrochemical reactions	82
2.3	Choice of the representative geometries for simulation	82
3	Results	85
3.1	Simulation for a “one-sided aluminium crevice”: 2-D side view.....	85
3.2	Simulation for a “one-sided aluminium crevice”: 2-D top view	85
4	Instrumented cavities of medium size	87
4.1	Experimental set-up	87
4.2	Results and discussion	88
4.2.1	Experimental results for Al 2024	88
4.2.2	Comparison between simulation and experiment	89
4.2.3	Possible application of the developed models	90
5	Conclusions	91

Subsection 3d Macroscale Galvanic Corrosion Modelling of an Aluminium Alloy **95**

1	Introduction	95
1.1	Corrosion risk in aircraft structures	97
1.2	Galvanic corrosion model.....	98
1.3	Modelling approach.....	98
2	Validation	100
2.1	Deep electrolyte environment	100
2.1.1	Case Scenario 1.....	104
2.1.2	Case Scenario 2.....	106
2.1.3	Deep electrolyte summary	109
2.2	Thin electrolyte environment	109
2.2.1	Electrochemical input	110

2.2.2	Experimental theoretical background	111
2.2.3	Experimental procedures	114
2.2.4	Results	115
2.2.5	Simulation results	116
2.2.6	Validation	116
2.2.7	Thin film discussion	118
2.2.8	Thin film summary	119
2.3	Localised coating damage	119
2.3.1	Experimental and modelling procedures	120
2.3.2	Methodology	121
2.3.3	Modelling approach	122
2.3.4	Results	122
2.3.5	Summary	124
3	Galvanic corrosion applications	125
3.1	Case Study 1	125
3.2	Case Study 2	127
4	Conclusions	128

Section 4 Investigation of Corrosion Prevention Methods for Aluminium Alloy Aircraft Structures

***Subsection 4a The Effect of Local Cladding on Aluminium Alloy Corrosion* 133**

1	Introduction	133
2	Experimental investigation and results	135
2.1	Corrosion evaluation of the unprotected material	135
2.2	Corrosion damage with simple local cladding patterns	135
2.3	Effect of scale on the protection performance of a clad spot and statistical analysis of the corrosion damage	137
2.4	Validation of a clad pattern	141
3	Conclusions	144

***Subsection 4b Effect of Surface Treatment, Anodisation, and Inhibitors on Corrosion of the Aluminium Alloy AA2024* 147**

1	Introduction	147
2	Experimental methods	148
2.1	Al 2024 sample preparation	148
2.2	Microstructure analysis	148
2.3	Pretreatment and anodisation of Al 2024-T3	149
2.3.1	Pretreatment	149
2.3.2	Anodisation	150
2.3.3	Combined pretreatment and anodisation	150
2.3.4	Electrochemical measurements	150

2.4	Corrosion inhibitors	150
2.4.1	Sample preparation	150
2.4.2	Electrochemical measurements	151
3	Results and discussion	151
3.1	Pretreated Al 2024	151
3.2	Pretreated and anodised Al 2024	154
3.3	Effect of pretreatment and anodisation on corrosion behaviour of Al 2024	159
3.4	Inhibitors	159
4	Conclusions	164

**Section 5 Decision Support Tool for Aluminium Alloy
Corrosion in Aircraft Environments**

**Decision Support Tool for Aluminium Alloy Corrosion
in Aircraft Environments 169**

1	Introduction	169
1.1	Decision support tool objectives	170
1.2	Simulation models incorporated in the DST	170
2	Integration approach	170
2.1	Input data for aircraft structures	172
2.2	Galvanic simulation	172
2.3	Parametric models	173
2.4	Documentation and reports	175
3	Case study optimisation of surface protection	175
4	Case study defect in protection system	177
5	Conclusions	177

Section 6 Impact on Industry

Impact on Industry 181

1	Use of corrosion modelling and simulation methods in industry	181
1.1	Use in the aeronautics industry	181
1.2	Contributions to standards, education, and training	184
1.3	Application of the results in other industries	185
2	Conclusions	186
