

please do not proceed with the proposed chair boards that will convene and discuss radio programming. This never works! It will become a platform for the most powerful people in the community to dictate what we should hear. I have to far too much of this control in my military service. Don't militarize the radio waves also. If a station has programming the community doesn't want no one will sponsor it and it will fail anyhow. It is common sense. If the government wants radio that supports everyones needs they will have to eventually start funding that requirement because legally this type of doctrine will have to be funded if the community requires it. How can you force a corporation to please all customers, this doesn't even work in a communist society. Be practical and stop opening up the door for future government cost and liability.
