## Dietary Exposure Assessment at the Food and Drug Administration:

A comparison of exposure assessment methods used in the Total Diet Study and analyses of individual food products

Katie Egan and Michael DiNovi ORACBA Risk Forum, Nov. 19, 2007

## Exposure Assessments

- Point Estimates - "The Estimate is ..."
- Safety assessments for food additives
- Evaluations using the TDS
- Probabilistic Estimates
- Contaminants
- Stochastic (from the Greek, stochastikos: to guess at)
- Monte Carlo
. Black box

## Simplified Exposure Equation

$$
E D I_{x}=\sum_{f=1}^{F} \frac{\text { Freq }_{f} \cdot \text { Port }_{f} \cdot \text { Conc }_{x f}}{N}
$$

$E D I_{x}=$ The Estimated Daily Intake of Substance $x$
F = Total no. of foods in which $x$ can be found
Freq $_{f}=$ No. of eating occasions for food $f$ over $N$ survey days
Port $_{\mathrm{f}}=$ Average portion size for food $f$
Conc $_{x f}=$ Concentration of the substance $x$ in the food $f$
$N=$ No. of survey days
Exposures for Individuals Combined

## Acrylamide Exposure

- Data included in 2006 assessment
- New data:
- 2005 targeted data, Table 4, http://www.cfsan.fda.gov/~dms/acrydata.html
- 2004 and 2005 Total Diet Study (TDS) data, Tables 2 and 3, http://www.cfsan.fda.gov/~dms/acrydat2.html
- Previous data from 2003, 2004 assessments:
- 2002-2004 targeted data, Tables 1-3, http://www.cfsan.fda.gov/~dms/acrydata.html
- 2003 TDS data, http://www.cfsan.fda.gov/~dms/acrydat2.html
- 66 food categories evaluated
- Ethnic, regional foods included

## Acrylamide Intake Modeling

## AA Intake $=\left(\right.$ Eaters $\left._{(\text {(yes or no })}\right) \times($ Food Amt. $) \times$ (AA Level)

Eaters $_{\text {(yes or no) }}$ - Either 0 or 1 in Proportion to Percent Eaters
Food Amount - Food Consumption Value from Survey Data
Acrylamide Level - Value from Laboratory Data Each Value Equally Likely on Each Iteration

Results are Summed over Foods and Individuals

## Acrylamide Intake Modeling

- Each Iteration is a Virtual Consumer
- 25,000 Iterations
- No Accounting for Correlations Between Food Choices
- Truncation of Distributions Removes Irrationally High Values
- 13 L of Coffee Per Day - 100 ${ }^{\text {th }}$ Percentile

## Acrylamide Model in Excel: Overview

| Food | \% eaters | Mean Intake | ACM Conc | Intake | Big Kahuna |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | (g/kg-bw-d) | (ug/kg) | (ug/kg-bw-d) | (ug/kg-bw-d) |
| Almonds | 0.3 | 0.3 | 320.3 | 0.000 | 0.44 |
| Nuts \& |  |  |  |  |  |
| Seeds | 5.9 | 0.4 | 36.1 | 0.001 |  |
| Bagels | 9.8 | 0.6 | 50.3 | 0.003 |  |
| Baked |  |  |  |  |  |
| Breaded |  |  |  |  |  |
| Breaded <br> Fish | 5.3 | 1.3 | 11.6 | 0.001 |  |
| Breakfast Cereal | 40.8 | 0.8 | 124.5 | 0.041 |  |

## Results - Feb. 2003

| Survey used | Age Group | Exposure (mean) | 90th \%ile |
| :---: | :---: | :---: | :---: |
| MRCA | $2+$ years | 0.48 Hg/kgbw-day | 0.91 |
| CSFII (3-day) | 2+ years | 0.32 | 0.66 |
| CSFII (2-day) | 2+ years | 0.37 | 0.81 |
| MRCA | 2-5 year olds | 1.26 | 2.33 |
| CSFII (3-day) | 2-5 year olds | 0.78 | 1.63 |
| CSFII (2-day) | 2-5 year olds | 1.00 | 2.15 |
|  |  |  |  |

## Acrylamide Intake Distribution CFSII 1994-96, 1998; 2+ Population

Acrylamide Intake ( $\mu \mathrm{g} / \mathrm{kgbw}-\mathrm{d}$ )

## Top 20 Foods by Mean Acrylamide Intake

| Food | Mean AA intake ( $\mu \mathrm{g} / \mathrm{kgbw}$-day) | Cumulative Percentile |
| :---: | :---: | :---: |
| French Fries (RF*) | 0.070 | 0.16 |
| French Fries ( $\mathrm{OB}^{*}$ ) | 0.051 | 0.28 |
| Potato Chips | 0.045 | 0.38 |
| Breakfast Cereal | 0.040 | 0.47 |
| Cookies | 0.028 | 0.53 |
| Brewed Coffee | 0.027 | 0.60 |
| Toast | 0.023 | 0.65 |
| Pies and Cakes | 0.018 | 0.69 |
| Crackers | 0.017 | 0.73 |
| Soft Bread diner | 0.014 | 0.77 |

| Food | Mean AA intake ( $\mu \mathrm{g} / \mathrm{kg} \mathrm{bw}$-day) | Cumulative Percentile |
| :---: | :---: | :---: |
| Chile con Carne | 0.014 | 0.80 |
| Corn Snacks | 0.011 | 0.82 |
| Popcorn | 0.007 | 0.84 |
| Pretzels | 0.007 | 0.86 |
| Pizza | 0.006 | 0.87 |
| Burrito/Tostada | 0.006 | 0.88 |
| Peanut Butter | 0.003 | 0.89 |
| Breaded Chicken | 0.003 | 0.90 |
| Bagels | 0.003 | 0.90 |
| Soup Mix | 0.003 | 0.91 |
| B, oven bake |  |  |

## Top Eight Foods by Acrylamide Per Portion

| Food | AA Conc <br> $(\mu \mathrm{g} / \mathrm{kg})$ | Portion <br> Size $(\mathrm{g})^{*}$ | AA ( $\mu \mathrm{g})$ Portion |
| :---: | :---: | :---: | :---: |
| Breakfast Cereal | 124.6 | 55 | 6.9 |
| Brewed Coffee | 8.0 | 240 | 1.9 |
| Postum | 93 | 240 | 22.3 |
| French Fries (RF) | 401 | 70 | 28.1 |
| French Fries (OB) | 697.8 | 70 | 48.8 |
| Potato Chips | 608.1 | 30 | 20.4 |
| Canned Black <br> Olives | 498.5 | 15 | 28.8 |
| Prune Juice | 206.3 | 140 |  |

Portion Sizes From 21 CFR 101.12, Table 2

## What-If Scenarios CSFII, 1994-96, 98, 2+ Population

- Mean= $0.44 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}, 90^{\mathrm{th}}=0.96 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$
- Remove AA from French Fries
- Mean - $0.37 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$; $90^{\text {th }}$ Percentile $-0.78 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$
- Remove AA from Snack Foods
- Mean - $0.38 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d} ; 90^{\text {th }}$ Percentile $-0.85 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$
- Remove AA from Breakfast Cereal
- Mean - $0.38 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$; $90^{\text {th }}$ Percentile $-0.84 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$
- Remove AA from Coffee
- Mean - $0.40 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d} ; 90^{\text {th }}$ Percentile $-0.88 \mu \mathrm{~g} / \mathrm{kgbw}-\mathrm{d}$

## Perchlorate Exposure

- Multi-agency Investigation
- May be natural, may be anthropomorphic
- Source isn't material
- Initial surveys completely inadequate
- Milk
- Vegetables thought to be irrigated with contaminated water
- 5 vegs, milk, and bottled water

## 2004-5 Survey expansion

- 27 foods and beverage classes
- Some seafood included
- 5 to >100 samples per food
- Consistently low, typically $\leq 10$ ppb, with occasional outliers
- Spinach and greens much higher
- >90 ppb
- Food consumption approx. 1/3 of the diet

## Perchlorate Residue Data

| Food Groups | Number of Data Points | Average Residue (ppb) |
| :---: | :---: | :---: |
| Lettuce | 137 | 10.3 |
| Milk | 125 | 5.81 |
| Tomatoes | 73 | 13.7 |
| Carrots | 59 | 15.8 |
| Spinach | 36 | 115 |
| Cantaloupes | 48 | 28.6 |
| Apples | 9 | 0.15* |
| Grapes | 12 | 8.58 |
| Oranges | 10 | 3.47 |
| Strawberries | 19 | 2.14 |
| Watermelon | 19 | 1.96 |
| Fruit Juices (Apple \& Orange) | 14 | 2.31 |
| Broccoli | 14 | 8.49 |
| Cabbage | 13 | 8.80 |
| Greens | 14 | 92.4 |
| Cucumber | 20 | 6.64 |
| Green Beans | 19 | 6.12 |
| Onions | 12 | 0.53 |
| Potatoes | 6 | 0.15* |
| Sweet Potatoes | 6 | 1.24 |
| Corn Meal | 22 | 1.16 |
| Oatmeal | 22 | 3.96 |
| Rice (Brown \& White) | 19 | 0.50* |
| Whole Wheat Flour | 19 | 4.27 |
| Catfish | 7 | 1.02 |
| Salmon | 11 | 1.06 |
| Shrimp | 5 | 19.83 |
| Total | 775 |  |

## Perchlorate Exposure

Population Monte Carlo estimate using @Risk software with 5,000 iterations* ( $\mu \mathrm{g} / \mathrm{kg}$-bw/d)

|  | Mean | 90th Percentile |
| :--- | :--- | :---: |
| All ages 2+ Years | 0.053 | 0.12 |
| Children, 2-5 Years | 0.17 | 0.34 |
| Females, 15-45 Years | 0.037 | 0.074 |

## Summary

- Simple distributional analyses allow data manipulation unavailable to point estimate methods
- All of the food consumption data come from one source
- TDS use of data is different, but conclusions support methodology
- Contamination concentration data give clue to source or type of incident/ecology
- Model uncertainty not evaluated
