

# **Network Research Infrastructure: Back to the Future**

Cisco.com

**Bob Aiken**

**Director, Engineering**

**Academic Research and Technology Initiatives  
(ARTI)**

**Cisco**

**August, 2003**

“Research  
is what I am  
doing when  
I don’t  
know what  
I am doing”

Werhner  
von  
Braun

Fire is invented.

# Evolution of Networks

- **1st the Earth cooled**
- **then we had Dinosaurs**
- **then we had oil**
- **then we had Mercedes Benz**
- **then we had ENIAC**
- **then we had ARPAnet**
- **then we had research networks (NSFNET, SURFnet, ESnet,...)**
- **then we had NGI**
- **then we had “THE Internet”, BMWs, and IPOs**
- **then we had the technology market bubble burst**
- **then the earth cooled – again - or did it?**

# Evolution of Networks – really

- ARPAnet
- NSFNET/JANET/SURFNET/SINET/ESnet/etc.
- NSFNET II - NAPs, vBNS, ... (circa 1992) - peering & network mgmt R&D
  - Commercialized Internet
- Gigabit testbeds (circa 1992-95) - optics R&D and ATM
- WEB takes off (circa 1994)
- I-WAY (circa 1995) – 1<sup>st</sup> temporary “GRID”
- Internet2/NGI – Deja vu all over again ala NSFNET (circa 1996)
- Middleware / Globus / GRIDs (circa late 1990s)
- E-Presence / Ubiquitous computing / Nano technologies / PDAs / wireless - all Chaos agents changing way we work and live
- Concurrent network research & production networks (e.g. NLR, CENIC) & GRIDs – idea from 1997 MORPHNET

# Network Research Trends

- **Intelligent Networks (not just Speed & Feeds)**
- **Dark Fiber & Waves**
- **VPNS & Tunneling**
- **Security, High availability, resiliency**
- **End to End Capabilities (core is least of our worries)**
  - Host, Campus, PAN, LAN, MAN, WAN
- **Next Generation TCP & Congestion control**
  - E.g. FAST, XCP, HS-TCP, RDMA , etc.
- **Convergence of Application, middleware and networks**
- **Network Research Infrastructures (e.g. NLR)**

# Intelligent Networks

Cisco.com

- **Network management**
- **Dynamic provisioning**
- **VPNS & Tunnels**
- **Signaling and control**
- **QoS**
- **Policy**
- **Content and Path optimization**
- **Security**
- **Adaptive and agile networks**

- **Congestion Control & scaling of IP & TCP**
- **Routing : packet size vs TCP scaling**
- **Multicast**
- **OSes (end system, kernels, memory copies)**
- **Light vs heavy weight protocols (eg.PDA)**
- **Macroscopic traffic and System considerations**

# Industry and Research Collaboration Opportunities

Cisco.com

- **All of the prior mentioned network trends provide ample opportunities for REAL Industry and R&E&D collaboration ;**
  
- **BUT**

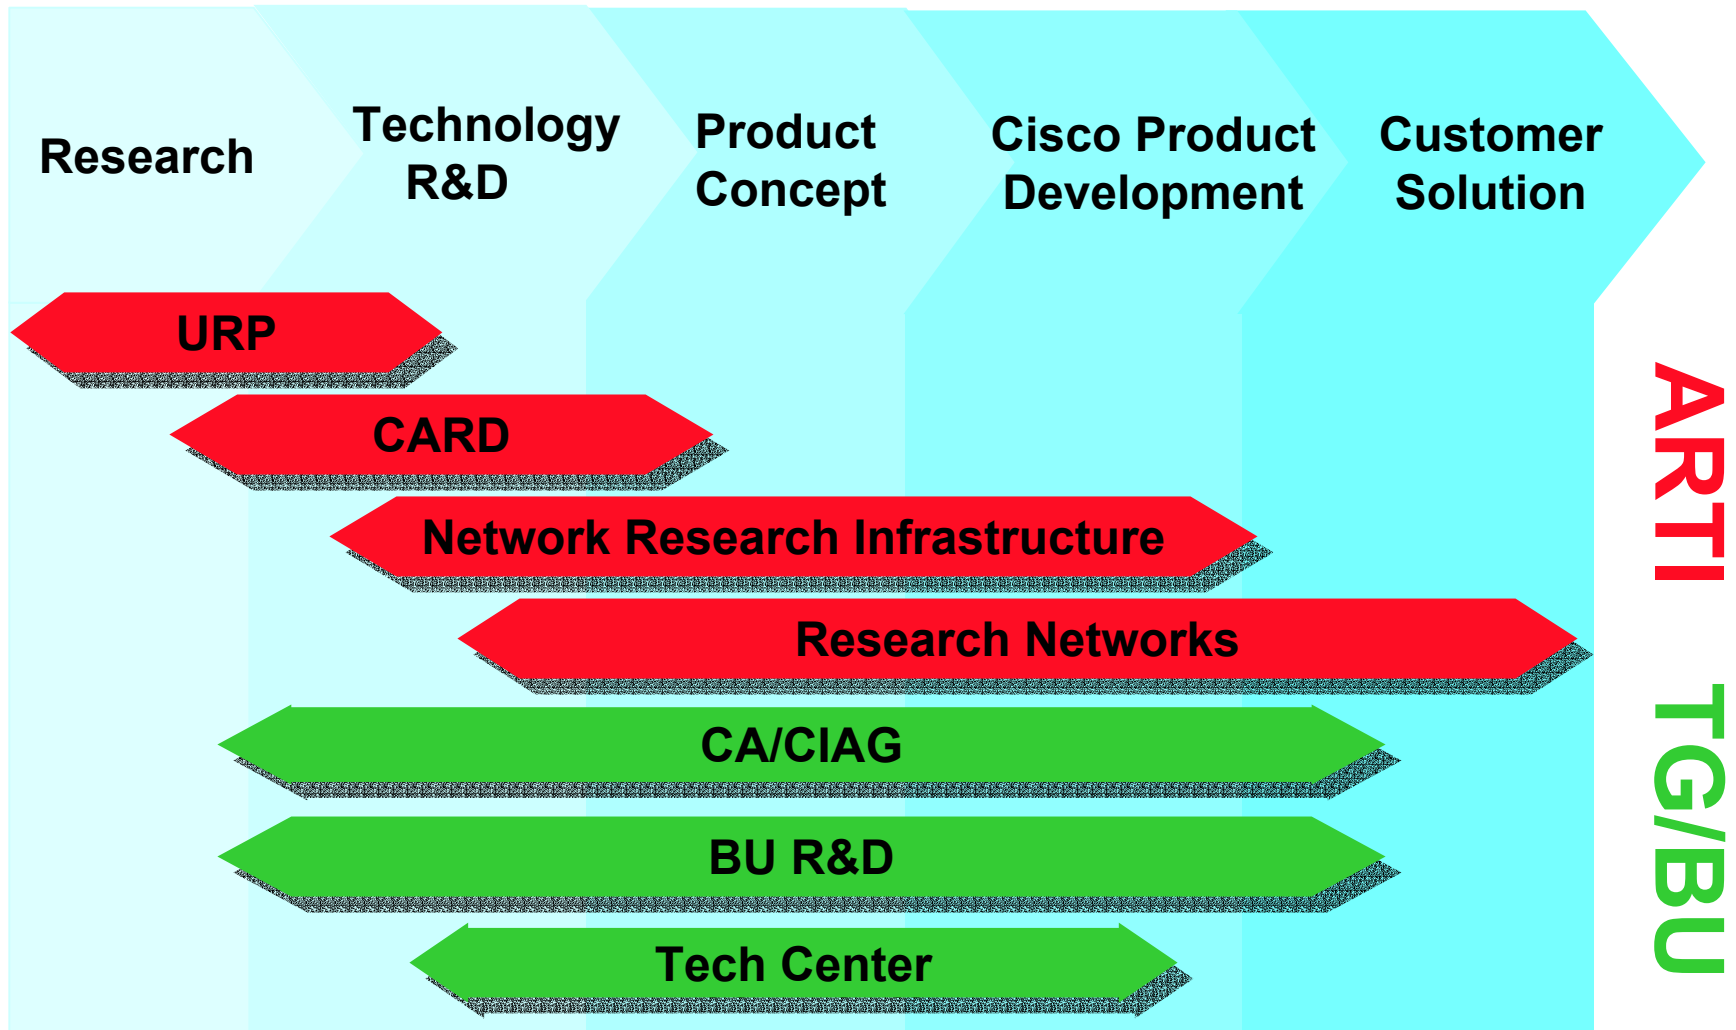

# We Need a New Model for Industry-R&E Collaboration

Cisco.com

- **Ask not what your industry partner can do for you , rather ask what you can do for your Industry Partner**
- **It's the relationship developed not the cheap or free HW & SW which is a value in the future**

# Cisco Research & Development

Cisco.com

# Technology Transfer & Industry Collaboration MYTH

Cisco.com

- **The Vast majority of research is never transferred to Industry or commercialized**
- **Industry collaborators should be more than names proposals**
- **“Submarine Truths”**
  - **R&D will develop niche markets which Industry won't pursue due to lack of markets**
  - **so Government and R&D community needs to belly up to the bar and pay for it – don't pass off as TECH XFER**

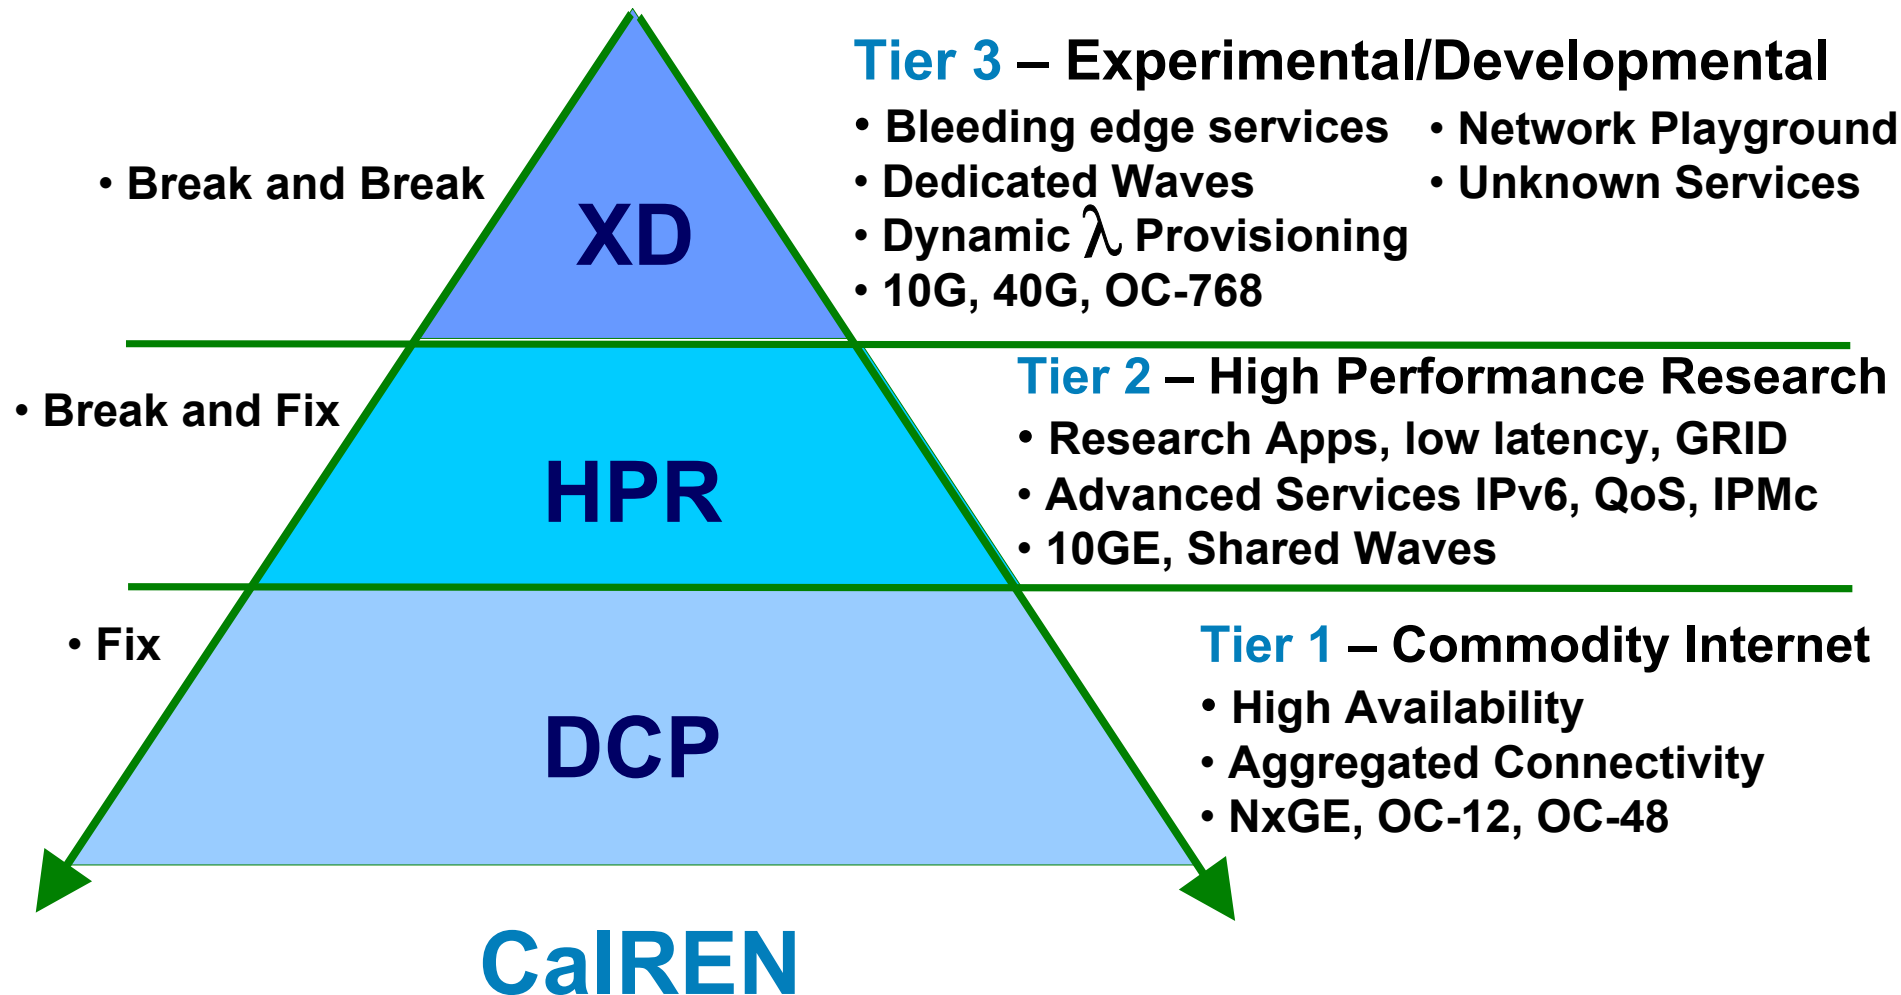

# Need New Model of Industry-R&E Relationship

Cisco.com

- **Quit looking to Industry as cash cows to just fund lunches, conferences, etc.**
- **Quit asking for free HW and SW**
- **Look for real partnerships**
  - **Put real \$ on table – pay for somethings – Industry will meet you halfway**
  - **No AUP – get real industry involved at all layers**
  - **Adopt real joint research and production infrastructure**
    - ✓ **No Pain No Gain – ie. cannot claim its cutting research when its based on 99.999% up time!**
    - ✓ **Real joint R&D will benefit both Industry and R&D**

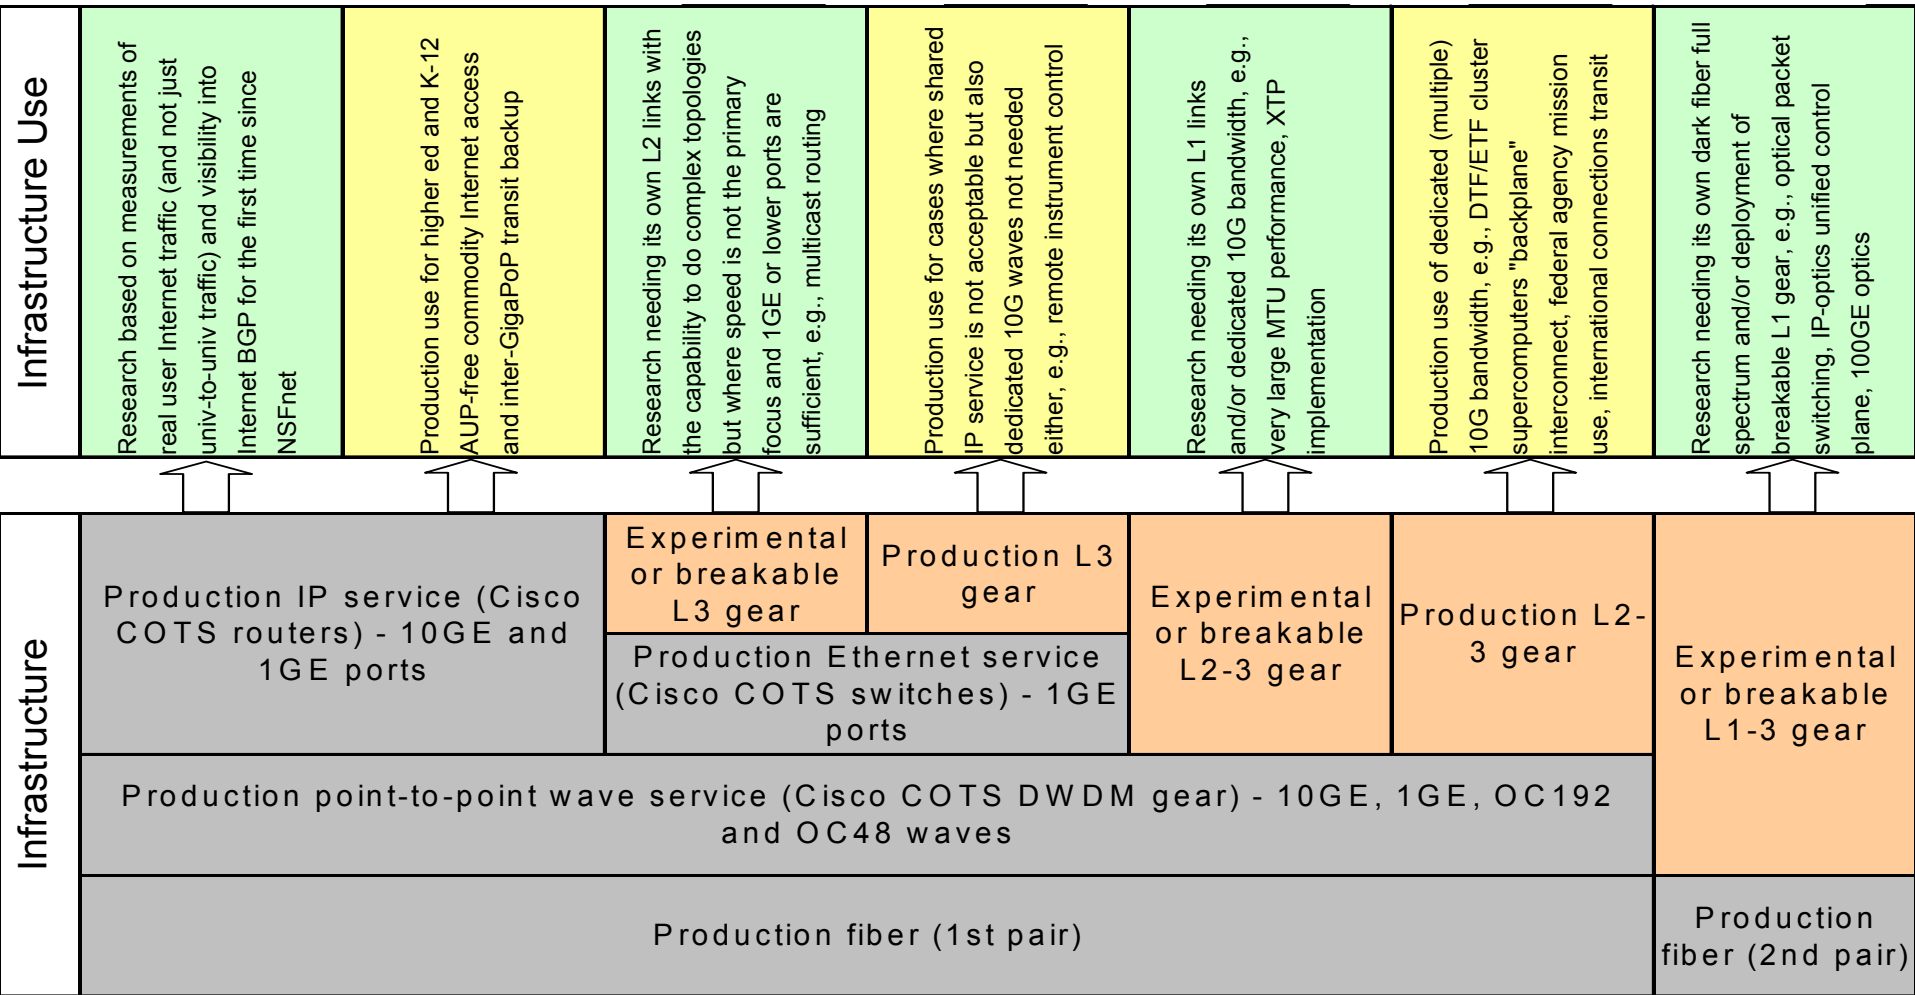

# CaIREN-2 : Design Methodology

Cisco.com

# NLR networking research use vs. production (aka MORPHNET) – NO AUP!

Cisco.com

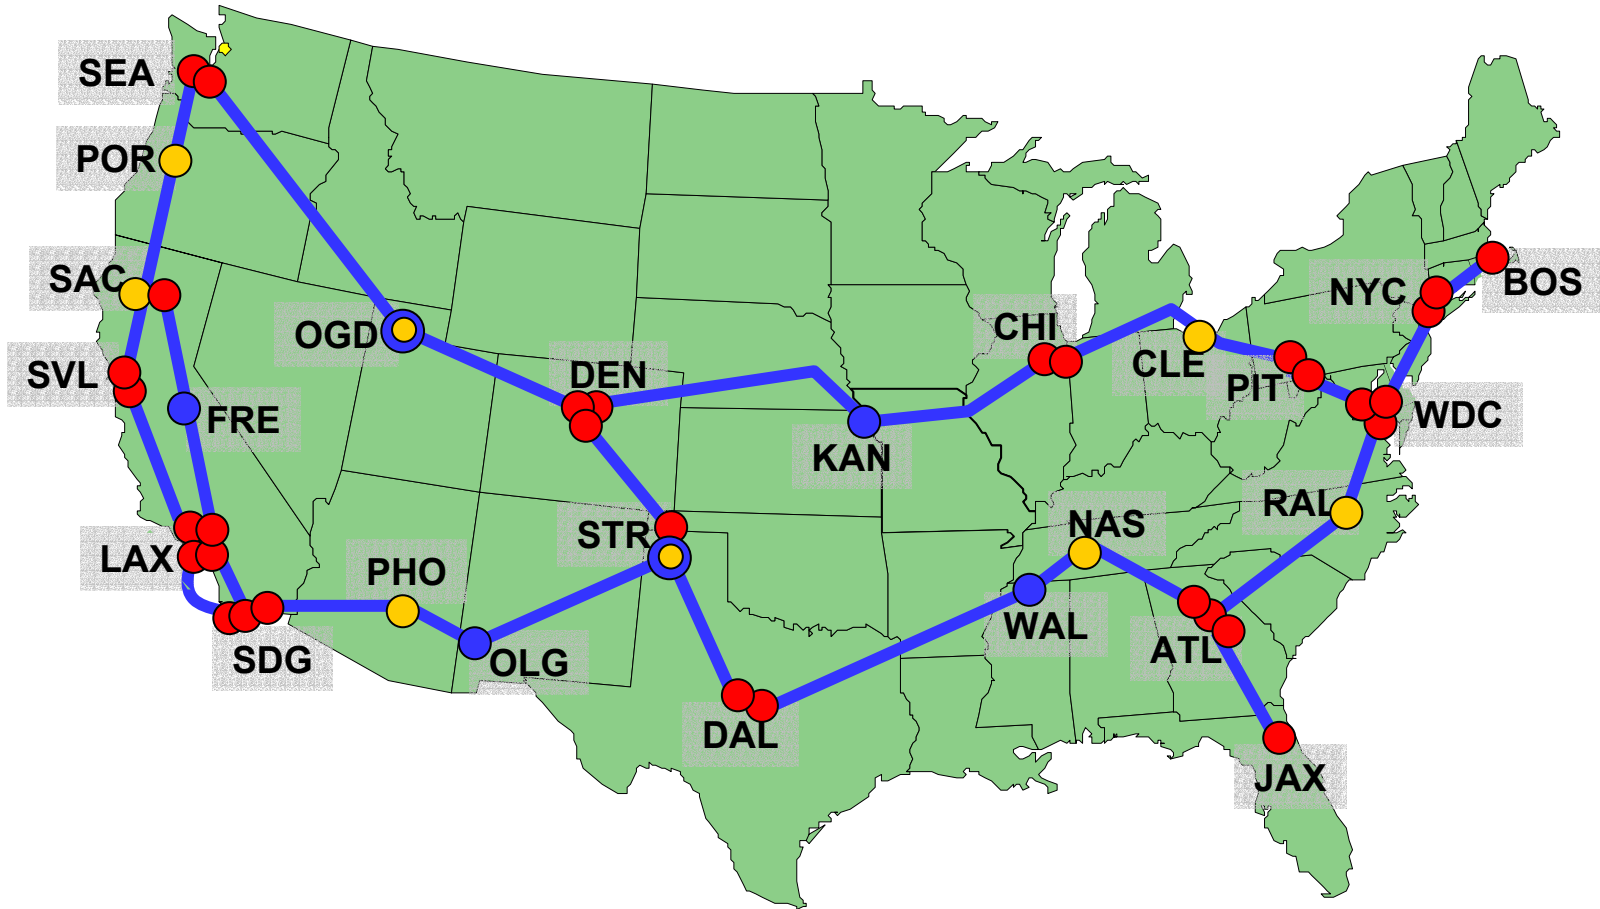

NLR operated  
 Research use

NLR or its production customer or researcher operated  
 Production use

# Experimental network facilities: NLR

Cisco.com

- 15808 Terminal
- 15808 OADM
- Fiber route

# Summary

- **Application and Network research were coupled on the ARPANET and NSFNET**
- **WEB grew as result of Application requirements and the existence of a transparently connected network research infrastructure**
- **Need to go back to the Future and do this again**
  - **This will only occur when we see a real partnership between Industry and R&D community that goes beyond just getting free HW/SW**
  - **Programs need to budget accordingly for Networks and other infrastructure and people**

Harold
