plus quinine ^{2,4}	650 mg PO tid x 7-10d	30 mg/kg/d PO in 3 doses x 7-10d
OR Atovaquone ^{2,5}	750 mg PO bid x 7-10d	20 mg/kg/d PO in 2 doses x 7-10d
plus azithromycin ²	600 mg PO daily x 7-10d	12 mg/kg/d PO x 7-10d

- Exchange transfusion has been used in severely ill patients and those with high (>10%) parasitemia (VI Powell and K Grima, *Transfus Med Rev* 2002; 16:239). In patients who were not severely ill, combination therapy with atovaquone and azithromycin was as effective as clindamycin and quinine and may have been better tolerated (PJ Krause et al, *N Engl J Med* 2000; 343:1454). Longer treatment courses may be needed in immunosuppressed patients and those with asplenia. Patients are commonly co-infected with Lyme disease (Med Lett Drugs Ther 2007; 49:49; AC Steere et al, *Clin Infect Dis* 2003; 36:1078).
- Not FDA-approved for this indication.
- Oral clindamycin should be taken with a full glass of water to minimize esophageal ulceration.
- Quinine should be taken with or after a meal to decrease gastrointestinal adverse effects.
- Atovaquone is available in an oral suspension that should be taken with a meal to increase absorption.
