# Fresh Deciduous Fruit <br> Apples and Concentrated Apple J uice <br> <br> 2007 

 <br> <br> 2007}

## Approved by:

Kate Snipes, Agricultural Attache
AgWarsaw
Prepared by:
Natalia Koniuszewska, Agricultural Specialist

## Report Highlights:

Polish production of apples and concentrated apple juice (CAJ) increased more than 10 percent in MY2006/2007 from the previous year. Dramatic declines of 50 percent or more in both products are expected in MY2007/2008 due to a late freeze in April and May 2007.

## Executive Summary

MY2006/2007 production of apples was 11 percent higher compared with MY2005/2006 and reached 2.3 million MT. Because of strong domestic production, exports were up 44 percent while imports dropped by 28 percent.

In addition, the production of concentrated apple juice (CAJ) increased by 10 percent, and exports rose by 21 percent. CAJ imports decreased dramatically from 48,000 MT in MY2005/2006 to 14,000 MT in MY2006/2007.

As a result of an unexpected frost of minus $10^{\circ} \mathrm{C}$ in April/May 2007, apple production MY2007/2008 will be 50-60 percent down from the previous season and is projected to be between 1.3 and 1.5 million MT. CAJ production is projected to drop about 60 percent to $90,000 \mathrm{MT}$. Exports of fresh apples and CAJ are expected to drop as much as 50 percent as well.

Poland's per capita consumption of fruit and fruit products is less than half the EU's consumption, but apple consumption is on par with EU consumption levels and even higher than in France and Spain. The consumption of fruit juice is similar to the EU average.

## Production

Despite spring frost and a dry summer, the harvest for MY2005/2006 rose to 2.3 million MT. In addition, CAJ production rose 18 percent to 230,000 MT. Many farmers are replacing old orchards with new apple trees to improve their quality and compete in the fresh apple market.

In 2006, farms noted a shortage in seasonal workers. Apple production costs will increase in future years as labor supplies in Poland continue to tighten.

A mild winter and unusually high temperatures in March/April 2007 resulted in early fruit tree blooming. However, two hard frosts with temperatures dipping to minus $8-10^{\circ} \mathrm{C}$, in late April and early May damaged almost half the apple trees in Poland. Specialists estimate that apple production in 2007 will be down about 50 percent to between 1.3 and 1.5 million MT. Poland is still in mid-harvest but reports confirm a steep decline in quality and quantity.

Polish CAJ production is expected to drop 60 percent this year because of lower domestic production and shortages of apples for processing in neighboring countries.

As Poland's apple producers shift their attention to higher-value apples for fresh consumption, FAS Warsaw expects CAJ production to fluctuate year to year depending on production, and decline gradually in the medium and long-term (for a more detailed review of long-term apple production, please see PL6061).

## State Aid for fruit producers

As in the entire EU, there are no subsidies for production or exports of stone fruit in Poland. Financial support is available for fruit producer organizations in specific cases. For example, when producers are facing low demand and low prices that would force them to incur losses, the Polish government can, under EU regulations, purchase the product for donation to charitable
organizations at acceptable prices. As all entrepreneurs, farmers can get financing for storage facilities and equipment for orchard protection.

## Trade

In MY2006/2007 the value of apple exports increased by 40 percent compared to the previous season. The biggest increase was in exports to Russia and Ukraine (almost tripled), as well as to Lithuania and Slovakia (doubled).

The value of CAJ in Euro did not change. Prices for CAJ were slightly lower, and the volume of exports increased by 3 percent offsetting the price declines. The significant decline in the value of the U.S. dollar led to the apparent increase in the value of CAJ exports of 23 percent expressed in U.S. dollar terms.

Poland's apple imports decreased in MY2006/2007, due to good domestic production. Meanwhile, imports of apples for processing decreased from 22,000 in MY2005/2006 to 6,756 MT, while imports of fresh apples for retail almost doubled from 7,922 in MY2005/2006 to $15,000 \mathrm{MT}$.

Imports of CAJ in MY2006/2007 decreased 71 percent compared with MY2005/2006, mainly due to higher local production and 35 percent increase of the price of imported CAJ.

Due to the poor harvest in 2007, exports of all fruits and fruit products will decrease in MY2007/2008. The biggest decrease will be in apple and CAJ exports which are forecast to fall 60 percent and 50 percent, respectively.

## Consumption

The prices on fruit and fruit products increased in 2006 by 3.4 percent compared with 2005. Apple prices increased by 17 percent in 2006, and by 100 percent in 2007. Retail prices of fruit and fruit products are lower in Poland than in other EU countries. In 2006 the average price of apples per kilo in Poland was less than half of the average price of apples in Germany.

According to the Main Statistical Office, the average consumption of fruit and fruit products was 42.6 kilos per capita in 2006 and decreased by 4.6 kilos from 2005. Consumption of apples decreased by 10.8 percent due to the overall increase of prices.

Lower apple production and higher prices will decrease the consumption of apples and apple juice in MY2007/2008.
