

# Opportunities in Epigenetic

**Mukesh Verma, PhD**

**Program Director**

**Analytic Epidemiology Research  
Branch**

**Epidemiology and Genetics Research  
Program**

**Chicago, September 20, 2004**

# Goal

**To stimulate population based research on application of epigenetic markers in cancer epidemiology**

# Markers in Epidemiology Research

## **Currently Used:**

**Genetic markers**

**Biochemical markers**

## **Unexplored:**

**Epigenetic markers**

**Proteomic markers**

In epidemiology, biomarkers are used to follow disease prevalence by determining their level in cohort studies with potential of identifying the high risk population

# Characteristics of Population Studies

In population based studies, questions of

- reliability,
- sensitivity,
- specificity,
- reproducibility, and
- scalable capacity for automation

are central in selecting assays to determine factors associated with carcinogenesis.

# Epigenetics: Background

**Epigenetics is the study of**

- mitotically heritable changes
- not caused by DNA sequence alterations

**Epigenetic controls**

- essential for normal development
- misdirected in cancer cells

# Background

**Misdirected epigenetic controls can cause**

- silencing of tumor suppressor genes
- activation of oncogenes

**Epigenetic events vs. genetic events**

- higher frequency
- can be reversed

# Epigenetics in Epidemiology

---

## Molecular Targets

### Tumor suppressor Genes

APC, p15, p16, p73, ARF/INK4A, VHL, ER, RARbeta, AR, HIC1, Rb

### Invasive/Metastasis suppressor Genes

E-cadherin, TIMP-3, mts-1, CD-44

### DNA Repair Genes

Methylguanine methyl transferase, hMLH1, BRCA1, GST

### Angiogenesis

Thrombospondin-1 ( TSP-1), TIMP-3

# Cancer Development is Lengthy

	Initiated	Premalignant	Cancer
<b>Breast</b>	14-18 yrs		6-10 yrs
<b>Cervix</b>	9-13 yrs		10-20 yrs
<b>Colon</b>	5-20 yrs		5-15 yrs
<b>Prostate</b>	20 yrs		3-15 yrs
<b>Lung</b>	? yrs		Many yrs

# Nanochip for Methylation

Micro-array test sites  
connected with platinum wires

# Why Epigenetic Markers

- **Multiple markers are better than single marker**
- **Complementary to biochemical and genetic markers**
- **Epigenetic events occur early in cancer development**
- **Easy to assay in small sample size (MS-PCR based assay)**
- **Source of markers: biofluids, exfoliated cells**
- **Automation possible (nanochips)**

# Funding Opportunities

**R03 (Small Grant): PAR-03-010**

**R21 and R33 (IMAT Program)**

**R01**

**R41/42 and R43/44**

## EPGN

Epigenetics represents a new frontier in cancer research. Information in the genome exists in at least two forms, genetic and epigenetic. The genetic information provides the blue print for the manufacture of all the proteins necessary to create a living organism, whereas the epigenetic information provides additional instructions on how, where, and when the genetic information will be used. The focus of the Epigenetics Interest group is on applications of epigenetic approaches in disease detection, risk assessment and treatment. The group meets on last Thursday of every month from 3- 4 pm.

# SUMMARY

Epigenetic markers can be used for cancer detection and risk assessment to identify populations at high risk of developing cancer
