## PART I - ELIGIBILITY CERTIFICATION

[Include this page in the school's application as page 2.]

The signatures on the first page of this application certify that each of the statements below concerning the school's eligibility and compliance with U.S. Department of Education, Office of Civil Rights (OCR) requirements is true and correct.

1. The school has some configuration that includes grades $\mathrm{K}-12$. (Schools with one principal, even K-12 schools, must apply as an entire school.)
2. The school has not been in school improvement status or been identified by the state as "persistently dangerous" within the last two years. To meet final eligibility, the school must meet the state's adequate yearly progress requirement in the 2003-2004 school year.
3. If the school includes grades 7 or higher, it has foreign language as a part of its core curriculum.
4. The school has been in existence for five full years, that is, from at least September 1998.
5. The nominated school or district is not refusing the OCR access to information necessary to investigate a civil rights complaint or to conduct a district-wide compliance review.
6. The OCR has not issued a violation letter of findings to the school district concluding that the nominated school or the district as a whole has violated one or more of the civil rights statutes. A violation letter of findings will not be considered outstanding if the OCR has accepted a corrective action plan from the district to remedy the violation.
7. The U.S. Department of Justice does not have a pending suit alleging that the nominated school, or the school district as a whole, has violated one or more of the civil rights statutes or the Constitution's equal protection clause.
8. There are no findings of violations of the Individuals with Disabilities Education Act in a U.S. Department of Education monitoring report that apply to the school or school district in question; or if there are such findings, the state or district has corrected, or agreed to correct, the findings.

## PART II - DEMOGRAPHIC DATA

All data are the most recent year available.
DISTRICT (Questions 1-2 not applicable to private schools)

1. Number of schools in the district:

| 20 | Elementary schools |
| :---: | :---: |
| 4 | Middle schools |
| 0 | Junior high schools |
| 3 | High schools * |
| N/A | Other (Briefly explain) |
|  | * 1-Alternative |
| 29 | TOTAL |

2. District Per Pupil Expenditure: $\quad \$ 6385$ (2002/2003)

Average State Per Pupil Expenditure: \$6719 (2002/2003)

SCHOOL (To be completed by all schools)
3. Category that best describes the area where the school is located:
[ ] Urban or large central city
[ ] Suburban school with characteristics typical of an urban area
[X] Suburban
[ ] Small city or town in a rural area
[ ] Rural
4. 7 $\qquad$ Number of years the principal has been in her/his position at this school.

N/A If fewer than three years, how long was the previous principal at this school?
5. Number of students enrolled at each grade level or its equivalent in applying school:

2003/2004

| Grade | \# of <br> Males | \# of <br> Females | Grade <br> Total | Grade | \# of <br> Males | \# of <br> Females | Grade <br> Total |

6. Racial/ethnic composition of the students in the school:

| 72 | \% White |
| :---: | :---: |
| 2 | \% Black or African American |
| 15 | \% Black or African American |
| 10 | \% Asian/Pacific Islander |
| 1 | \% American Indian/Alaskan Native |
|  | \% Total |

7. Student turnover, or mobility rate, during the past year: ___ $\underbrace{3} \%$ (per '02 STAR)
(This rate includes the total number of students who transferred to or from different schools between October 1 and the end of the school year, divided by the total number of students in the school as of October 1, multiplied by 100.)

| $\mathbf{( 1 )}$ | Number of students who <br> transferred to the school <br> after October 1 until the <br> end of the year. | 43 |
| :--- | :--- | :---: |
| $\mathbf{( 2 )}$ | Number of students who <br> transferred from the <br> school after October 1 <br> until the end of the year. | 47 |
| $\mathbf{( 3 )}$ | Subtotal of all <br> transferred students [sum <br> of rows (1) and (2)] | 90 |
| $\mathbf{( 4 )}$ | Total number of students <br> in the school as of <br> October 1 | 1,078 |
| $\mathbf{( 5 )}$ | Subtotal in row (3) <br> divided by total in row <br> (4) | .083 |
| $\mathbf{( 6 )}$ | Amount in row (5) <br> multiplied by 100 | 8.3 |

8. Limited English Proficient students in the school: __ $3.9 \%$
_44 Total Number Limited English Proficient
Number of languages represented:
Specify languages:

| Canton Chinese | Mandarin Chinese |
| :--- | :--- |
| German | Russian |
| Japanese | Spanish |
| Korean | Pashto |

9. Students eligible for free/reduced-priced meals: ___ 11.6 _ $\%$

## 130 Total Number Students Who Qualify

If this method does not produce a reasonably accurate estimate of the percentage of students from low-income families or the school does not participate in the federally-supported lunch program, specify a more accurate estimate, tell why the school chose it, and explain how it arrived at this estimate.
10. Students receiving special education services:
$\left[100^{9}{ }^{\%} \%\right.$ Total Number of Students Served

Indicate below the number of students with disabilities according to conditions designated in the Individuals with Disabilities Education Act.

| 1_Autism | 2_Orthopedic Impairment |
| :---: | :---: |
| Deafness | 33_Other Health Impaired |
| Deaf-Blindness | 41 Specific Learning Disability |
| 3_Hearing Impairment | 19_Speech or Language Impairment |
| 1_Mental Retardation | Traumatic Brain Injury |
| Multiple Disabilities | Visual Impairment Including Blindness 0 Emotional Disturbance |

11. Indicate number of full-time and part-time staff members in each of the categories below:

## Number of Staff

## Full-time Part-Time

## Administrator(s) <br> Classroom teachers

Special resource teachers/specialists
$\qquad$

5 $\qquad$
$-\frac{12}{25}$
$\qquad$
12. Average school student-"classroom teacher" ratio: 34:1
13. Show the attendance patterns of teachers and students as a percentage. The student dropout rate is defined by the state. The student drop-off rate is the difference between the number of entering students and the number of exiting students from the same cohort. (From the same cohort, subtract the number of exiting students from the number of entering students; divide that number by the number of entering students; multiply by 100 to get the percentage drop-off rate.) Briefly explain in 100 words or fewer any major discrepancy between the dropout rate and the drop-off rate. (Only middle and high schools need to supply dropout rates and only high schools need to supply drop-off rates.)

|  | $2002-2003$ | $2001-2002$ | $2000-2001$ | $1999-2000$ | $1998-1999$ |

| Student drop-off rate |  |  |  |  |  |

## Part III - Summary

Los Cerritos Middle School, home of the Leopards, is one of 5 middle schools located in the city of Thousand Oaks, California. We are known for high academic achievement, outstanding award-winning music programs, strong student-support programs and activities, highly skilled and dedicated teachers and staff, a welcoming and friendly front office, and an active, hard-working and supportive PTSA group volunteering thousands of hours a year for the benefit of students. We are also lucky to have a supportive local community, including companies that partner with our school district, such as Amgen, the Rockwell Science Center, Sage Publications, Baxter Healthcare, and California Lutheran University. We are fortunate to have a flourishing cultural community, and strong connections to several local universities and colleges. Our active city government supports our schools and our children in a partnership with the Conejo Valley Unified School District. Recent community efforts have resulted in significant support to our schools: Measure R provided $\$ 90$ million dollars for school renovation and innovation; the city has co-funded a number of facilities for our district's students; and the recently established Conejo Schools Foundation will further support our schools now and in the future.

Students attend Los Cerritos from 6 feeder elementary schools, as well as other outlying schools through our district's school choice program. Our increasing enrollment reflects the growing respect and demand for our services and instructional programs, particularly in the $6^{\text {th }}$ grade where our program has more than doubled over the last 5 years from 144 students to a current enrollment of 316 .

Our culturally diverse student body creates a rich school environment for all students with proven results of excellence. Our school wide API (Academic Performance Index) score has risen steadily over the last three years to a score of 840 ; subgroups have also shown growth in scores: the scores for our white students have risen from 807 to 841 to 851 . But one of our proudest accomplishments has been the success we have experienced with our Hispanic students as their scores have also risen due to our efforts. They have improved from a score of 585 to 650 to our current score of 709 , a single-year jump of 59 points after previous increases over two years of a total of 124 points.

Our comprehensive program is designed to ensure success for all students. We devote resources to meeting the needs of under-performing groups of students: our economically disadvantaged students as well as our English Learner population. That effort also benefits the school population as a whole. What we do for struggling students helps all students.

The mission of Los Cerritos Middle School is to promote a safe, supportive and creative environment so that all students strive for and achieve high academic standards. We understand, value, and address the complex social, emotional, and physical needs of middle school students. We provide a structured transition as students progress from elementary school to high school and beyond. Working as partners with their parents, we guarantee them a quality education through a varied, comprehensive, and rigorous curricular and extra curricular program designed to nurture ethical citizens and life-long learners. In order to fulfill our mission, we currently focus our standards-based program on four major goals to guide our decision-making, our work and our resources: improvement in 1) student achievement in English, language arts, and reading; 2)student achievement in math; 3)skills and achievement for struggling, and identified "at risk" students; and maintenance and improvement in current excellent quality programs and services.

## Part IV - Indicators of Academic Success

## 1. School Assessment Results

Since spring of 2001, the California Standardized Testing and Reporting (STAR) program has been in place to reflect how students in our school achieve annually in various subject areas. Currently, the STAR program includes California Standards Tests (CST) for English/Language Arts and Mathematics and shows how well students are doing in relation to the state content standards. Student scores are reported as five performance levels: Advanced (exceeds state standards), Proficient (meets standards), Basic (approaching standards), Below Basic (below standards), and Far Below Basic (well below standards). Students scoring at the Proficient or Advanced levels have met state standards in that content area.

Our school has consistently scored well above state average scores in all areas, especially for the economically disadvantaged and Hispanic students. We have also seen dramatic results in our standardized test scores over the last few years, and we attribute those increases to a schoolwide focus on reading, math and writing, as well as to our over-arching and continuous focus on helping struggling and at-risk students. By incorporating instructional and program strategies to help those struggling at-risk students, we have helped all students and witnessed increases in all scores.

For English/Language Arts, our data shows student proficiency scores that are high or increasing over three years. Our $6^{\text {th }}$ graders consistently score the highest of the three grade levels, with 2003 scores ranging from $55 \%$ proficient or advanced, to $79 \%$ for various disaggregate groups. Only one group, a severely educationally disabled group, shows low scores. We continue our search for instructional methods to help them achieve at higher levels. Our $7^{\text {th }}$ graders' 2003 scores show a similar pattern: a range of proficient or advanced scores of $55 \%$ to $71 \%$. Eighth graders performed consistently also in 2003. In most cases, scores over the last three years have risen for all grade levels in English/Language Arts. Data from previous state standardized tests in our district's internal system show high scores and growth.

In the area of Mathematics, the achievement gap between all students and sub-groups of students is closing. The most significant information shows that the three sub-groups represented at Los Cerritos: socio-economically disadvantaged, Hispanic students (many of whom also appear in the disadvantaged group) and disabled students, show consistently improving scores well above the average scores for those groups in the state of California. This is particularly significant because, as our total school population has remained relatively steady, these subgroups have all grown in size. Our total socio-economically-disadvantaged student group has in the last year nearly doubled in size, and yet their percentages of proficient and advanced scores have risen by $10 \%$. The number of our disabled students has also grown by $30 \%$ and their scores have risen also. Several years ago, our district made 3 changes to our math program based on comparative state and nationwide data. We concluded that $8^{\text {th }}$ grade students were capable of learning Algebra ( a course for $9^{\text {th }}$ graders, primarily in California), and that students who came to Los Cerritos from feeder elementary schools needed a different program and approach in order to learn algebra successfully. Our district adopted Every Day Math for students K through $6^{\text {th }}$ grade, we used class size reduction funding from the state to lower the class ratio of Algebra classes to 20 to 1 , and we also designated the college prep $7^{\text {th }}$ grade math course as pre-algebra, all in an effort to "raise the bar" for our students and help them succeed.

## 2. Use of Assessment Data to Improve Student and School Performance

Our process of staff, program and student evaluation is directly linked to our analysis of student assessment data aligned with standards, and we rely on a wide spectrum of data sources for information about our students, including daily classroom and anecdotal information; writing and work samples; discipline records; benchmark assessments; Edusoft, a standards-based computer program that administrators and teachers are currently being trained to use; and standardized testing data, to improve student performance and to improve the programs at our school. Staff review different kinds of data from their own angle to help struggling students, enrich the program of already successful students, and challenge the exceptional/very bright students so that all can have their best experience with us and learn as much as they can before they move onto high school. In order to understand a myriad of data, we continually distribute the various forms of data all through the year to groups of staff and ask for their conclusions about what they "see." We discuss those perspectives and analyze the information at staff meetings, case conferences, department meetings, administrative meetings, looking closely to see which groups are doing well, why, and how we can use that information to help groups of students.

To improve school performance we use the same wealth of data sources, but view them with different "eyes" that analyze how we can improve our courses and programs to help students be successful. For example, teachers look specifically at math benchmark exams to see where our students need further instruction on concepts. Also, teachers, counselors and the principal look at ELL (English Language Learner) students' scores on the CELDT (California English Language Development Test) and other indicators for information about how to improve the program for those students. As our staff works through the year to monitor student progress with the data we use, we discuss strategies and formulate plans to devote resources such as School Improvement funds, master schedule/course offerings, personnel, etc. We draw upon a number of types of funds to most efficiently support programs for students and staff.
3. Communicating School Performance

We have numerous ways to communicate our students' performance to parents, students and the community. All members of the school community receive the annual School Accountability Report Card, a profile of our school, containing demographic and assessment data, the school mission, and goals. Along with the regular tools schools use to communicate individual student progress, such as report cards and email to and from homes, our school features a computer program called Edline that allows parents to access their student's records in the district system. Through this program, parents can also see a standardized test score history for their child and access to classroom data, class work, and homework from each of the student's teachers using GradeQuick. To communicate whole-school and/or disaggregate group information to our school community, we use a number of venues, including School Site Council meetings, monthly PTSA meetings, our school website, the School Accountability Report Card, bi-monthly bulletins and the Leopard Letter. We have an active ELAC committee (English Learners’ Advisory Council) where we regularly share information and data about our English learners and about the entire school population.

We celebrate students' hard work and good behavior through the Renaissance program, which rewards students for excellent performance as well as for improved performance, a feature that allows all students to achieve and be acknowledged. DARE culmination celebrates $6^{\text {th }}$ grade students' hard work and dedication in the DARE curriculum. We hold Student of the Month luncheons, give Principal's Honor Roll certificates, and end the year with awards nights in June separately for $7^{\text {th }}$ and $8^{\text {th }}$ graders to honor them for their outstanding work in all subject areas, not just academics.

## 4. Sharing Success

Because we are part of a unified school district in a county devoted to educational collegiality, it is easy for us to share our success with other schools. Our school district structures and supports articulation efforts among all our schools and school levels so that we can learn from each other the instructional strategies and programs that best benefit our students. Parents at all schools are very active and involved and help spread success. The district also sponsors a monthly District Advisory Council, an active forum where schools send representative parents to communicate and share their school's ideas, information, and successful programs, among other topics as they act as an advisory group for the Instructional Division. Secondary principals also share ideas through regular focus group meetings. Through a comprehensive and excellent county inservice program coordinated by our county superintendent's office, administrators and groups of lead teachers regularly attend to hear nationally recognized researchers and speakers such as Doug Reeves, Robert Marzano, Deborah Pickering, and Grant Wiggins, on instructional topics focused on ways to improve schools. Through these workshops, teachers and administrators have opportunities to share ideas with colleagues from sites around the county. We always welcome visiting teachers and staff who want to garner ideas from us; we have sent staff to area schools to glean ideas from them. We are willing givers and takers.

## PART V Curriculum and Instruction

## 1. The School Curriculum

A strong core curriculum, based on state frameworks and standards adopted by our district in each curricular area, stresses the mastery of basic skills and their application when solving problems and thinking critically. Continuous work by site and district teachers and administrators to analyze, refine, and implement the curriculum, provides students with a comprehensive, rigorous, and rich educational program.

Visual, practical, and performing arts are an integral part of our curriculum, offering students courses of their interest taught by teachers with a passion for their particular expertise. Nearly 200 students elect to take either beginning, intermediate or advanced band and strings classes open to all students, as well as a jazz band class.

Students at all three grade levels take English and social studies as a two-period core block or core team, emphasizing reading, writing, speaking and listening and grammar/conventions through varied genres of literature representing diverse cultures.

The California Content Standards for middle school social studies require study of the origin and development of major Western and non-Western civilizations. Eighth graders at Los Cerritos also study an in-depth unit called "We the People," developed and distributed by the national Center for Civic Education, about our Constitution and its application throughout our country's history as well as its impact today. Students use a "debate style" format, culminating with a district-wide competition for all $8^{\text {th }}$ graders in front of panels of judges from the community. Our middle school embraces this program because of its depth and the results we see among our students who can eloquently explain, analyze and argue/defend constitutional issues. Also, teachers trained in the Teacher's Curriculum Institute's "History Alive!" program augment our social studies lessons focusing on different learning styles to help meet the needs of diverse learners.

Our foreign language program has doubled in size in the last three years. Almost half of our $8^{\text {th }}$ graders take Spanish I for high school credit, and $80 \%$ of those students enroll in the second year language course at the high school to be able to continue through advanced placement studies in the $4^{\text {th }}$ and $5^{\text {th }}$ years. We offer French I when demand supports it. Depending on student interest and staff, we offer $7^{\text {th }}$ graders Spanish, French and German for 13 weeks each as part of an elective wheel. Languages are taught with the "language acquisition"
approach, integrating reading, writing, speaking and listening skills with a natural use and study of grammar.

Math courses offer students conceptual understanding, problem solving, algebraic preparedness, and mathematical thinking. Eighth graders take Algebra I in classes limited to 20 students.

Students learn that the sciences affect practically everything around them. They use the scientific method for meaningful, engaging, thought-provoking projects, hands-on labs, fieldtrips, and technology to help them achieve with high results. The teachers also expect that students will learn valuable life skills critical to the world of work later in high school and beyond. They do this by teaching them the safe use of scientific equipment, listening skills, following directions, note taking, and the ability to work cooperatively in small groups with a common purpose.

## 2. English Language Arts Curriculum and Reading

We improve the reading skills of students reading below grade level by assessing and identifying their skill level and enrolling them into a number of appropriate courses. Special education students receive instruction within the special education program. Students who do not qualify for special education, but read below grade level, take a reading class staffed at 20 students to one teacher, in addition to the English/social studies core. The special education and reading teachers have at their disposal a number of research-based programs to target particular reading weaknesses: Academy of Reading is a computer program that addresses automaticity and fluency; Soar to Success focuses on reading comprehension; Corrective Reading is a direct instruction program that has been statistically proven to increase decoding and reading comprehension skills. The reading teacher also offers students an individualized program which is highly motivational, turning non-readers into avid enthusiasts!

Our school has won the Governor's Reading Award for using Accelerated Reader, a program to help English teachers to guide students to choose and read challenging books. Students read a designated number of pages per month to prove their comprehension through the program specifically designed to improve the skills of less able readers. A newly-purchased computer program called Successmaker helps students remediate the gaps in their reading and language arts skills. Its use in reading classes, our ELL class, special education classes, and our after-school Boys' and Girls' Club promises to improve students' reading skills in yet another way.
3. Math, Essential Skills, and Knowledge

Los Cerritos math teachers offer a balanced curriculum emphasizing basic skills, problem solving, and conceptual understanding based on the state math framework/standards and district standards. Teachers design lessons to meet a variety of learning styles using whole class instruction, cooperative learning groups, independent work, and activities and projects with realworld applications. In support of the school's emphasis on writing across the curriculum, the math teachers design and implement specific real-life math problems that students must analyze, solve, and explain in expository writing assignments. Other cross curricular integration includes time lines, map skills, the stock market, mini-society in social studies, and measurement in science, elective and physical education classes.

Sixth grade features Everyday Math, a challenging and comprehensive program designed to train students to view concepts, problems, and solutions in varied ways. Students receive instruction in "cored" math/science blocks to allow students time to achieve mastery in standards. Pre-algebra is the focus of the seventh grade curriculum; Algebra is the focus for eighth grade in classes enrolled at 20 to 1 . Approximately $80 \%$ of both seventh and eighth grade students are enrolled in college prep or honors math. Morning Math Help offers all students daily math help before period 1 . We also offer a before-school remedial math class for students
struggling with basic skills in addition to their regular math class. There is on-going communication between our teachers and the high school math teachers to ensure that all students are prepared for their next level of schooling.

## 4. Instructional Methods That Improve Student Learning

At Los Cerritos, a strong, collaborative instructional emphasis on improvement of students' reading and writing and math skills across the curriculum permeates all content area courses, including Physical Education and electives. Teachers document their work with students, and students receive instruction in a reading or writing "strategy of the month" and submit essays to the principal. Reading strategies are used with content area text, while writing strategies can either be implemented directly from the "Writing Plan" or modified to fit the nature of writing instruction within the subject area, particularly in math where formal "essays" are replaced by real life math problems which students must explain in expository writing assignments.

Our teachers use a variety of proven traditional and cutting edge instructional methods in all subjects, including teacher-directed lessons, student presentations, innovative class projects, computer and video technology, hands-on lessons, and on-line research and networking. Math 8/Algebra teachers focus on effective small group instruction with maximum enrollment ratios of 20 students per teacher.
5. Professional Development and Its Impact on Improving Student Achievement

Collegial review of school data has led us to a renewed commitment and collaboration among teachers and staff school-wide, in departments, grade levels, and programs. We use many opportunities to discuss, analyze, plan, share ideas, and formulate goals. We support staff in their own professional growth by, for example, teaching the school's monthly reading strategy to all teachers, analyzing and scoring student writing samples as a group, designing units and lessons collegially, reviewing and analyzing content standards in small and large groups, designing benchmark tests in math,

Teachers in English/Language Arts, social studies, and math work together on planning days throughout the year to share new instructional strategies, plan units and lessons, share workshop ideas, and analyze student work in order to refine their teaching and their classes. Teachers in other curricular areas meet on a regular basis for decision making and instructional planning. Teams of secondary teachers meet quarterly in articulation meetings to ensure that standards are implemented uniformly without sacrificing creativity.

Our leadership team of teacher leaders provides staff development, data analysis and reflection, teaching ideas and strategies, and inspiration to all staff. We provide these experiences at monthly staff meetings, department meetings, planning days and pupil-free days.

Our School Site Council dedicates large portions of improvement funds, from 30 to $35 \%$ of an annual budget, to support teacher planning days, technology training, workshop attendance, peer observation, etc.

In 1999 Los Cerritos received its baseline API score of 805 . We were proud of that score, but knew from our PQR (Program Quality Review) process and our own internal indicators of growth and success that we could raise the bar and work to improve not merely the number, but, more importantly, our students' skills. Our school wide API score has risen steadily to 838 for the spring 2003 testing. One of our proudest accomplishments has been the success we have experienced with our Hispanic students as their scores have risen steadily, an increase of 124 points in the last three years. This is clear evidence that our efforts have had an impact on student achievement.
