Appendix B

List of Animal Names and Their Classes

Introduction

Use this appendix to determine the class of an animal when all you know is the animal's name. This appendix lists common, foreign, and scientific names of animals. Scientific names are listed by genus and set in italics.

For each animal name, its class is identified by one of the following letters:

(H)

Horse

(P)

Poultry/Birds—When appropriate, the animal name will be distinguished as a game bird

(R)

Ruminant

(nr)

Regulate as ruminant—although **not** a ruminant, can transmit diseases of ruminants (for example, FMD and bovine tuberculosis)

(S)

Swine

(O)

Other—represents a class of animal **other than** horse, poultry, ruminant, or swine. Animal products and by-products of other classes (either listed with an (O) or **not** listed) are **not** restricted by the agricultural requirements of Animal and Plant Health Inspection Service

List of Animal Names and Their Classes

The list of animal names and their classes follow.
