### Fire Regime Condition Class (FRCC) Interagency Handbook Reference Conditions

Modeler: Kelly PohlDate: 9/3/03PNVG Code: MCAN

#### Potential Natural Vegetation Group: Mixed Conifer

#### Geographic Area: Southwest

**Description**: Generally found in upper montane zone on steep to gentle slopes, predominantly on mesic, north-facing slopes. Pseudotsuga menzesii, Pinus spp., Abies concolor, Juniperus spp., and Quercus gambelli are present.

**Fire Regime Description:** Fire regime group I. Includes frequent surface and mixed-intensity fires (MFIs range from 3-20 years) with occasional replacement fires. Fires create large openings and mosaics of age structures.

Class	Percent of	Description			
	Landscape				
A: post	10	Openings with grass, shrub, and forbs created			
replacement		after replacement fire. May have dense			
		Quercus gambelli shrubs and seedlings of a			
D	-	variety of conifer species.			
B: mid-	5	>30% canopy cover of sapling or pole conifer			
development closed		species, mostly Pseudotsuga menzesii or Abies concolor.			
C: mid- open	20				
0. mid- open	20	spp. with some Juniperus spp. and Quercus			
		gambelli.			
D: late- open	60	•			
·		ponderosa with Pseudotsuga menzesii, Abies			
		concolor, Juniperus spp, and Quercus			
		gambelii.			
E: late- closed	5	15			
		species, including Pseudotsuga menzesii,			
Tetel	100	Pinus spp., Abies concolor, and Juniperus.
