## Floriculture Crops <br> Connecticut and Massachusetts

May 19, 2005
A special "THANK YOU" to greenhouse operators and floriculture producers who have helped us by completing the Annual Floriculture Survey during January and February.

Connecticut: The number of commercial growers in 2004 was 250 , down 34 growers from the previous year and is the lowest number of growers in the last 10 years. The wholesale equivalent value of sales increased from $\$ 82.2$ million in 2003 to $\$ 90.6$ million in 2004. Bedding and garden plants remained the largest category with 85 percent of wholesale equivalent sales for operations with more than $\$ 100,000$ in sales.

Massachusetts: The number of commercial growers in 2004 was 395, down 36 growers from the previous year; also, the lowest grower count in the past 10 years. The wholesale equivalent value of sales increased from $\$ 76.8$ million in 2003 to $\$ 77.4$ million in 2004. As was true in Connecticut, bedding and garden plants were the largest category with 74 percent of wholesale equivalent sales for operations with more than $\$ 100,000$ in sales.

All values in the following tables are wholesale equivalent value of sales; they were derived by multiplying the average wholesale price by the total quantity sold.

About the Survey: The Floriculture Survey is conducted annually by USDA's National Agricultural Statistics Service (NASS). It is a "census" of all known operations with more
than $\$ 10,000$ in floriculture sales. For operations with more than $\$ 100,000$ in sales, detailed data is collected about specific varieties.

The greenhouse and nursery industry comprises more than one-third of all cash receipts received by agricultural producers in each of the two states. The annual Floriculture Survey measures one portion of this important sector of the agricultural economy. The survey is done at the request of the National Floriculture Industry and is endorsed by the Connecticut Greenhouse Growers and Massachusetts Flower Growers Association and the Extension Service.

The results of the survey are available to the public. Associations use these statistics when working with policy makers at the state and national levels. University Extension specialists justify research grants and other activities with statistics that describe the size and importance of the industry in each state. Banks and other lending institutions often use the data when evaluating loan applications. Individual producer data is kept strictly confidential and used only in combination with other reports to prepare State and National statistics. Individual information is exempted from disclosure under the Freedom of Information Act.

This is a brief summary taken from the National Floriculture Crops report. It is issued annually from the National Agricultural Statistics Service in Washington, D.C. The complete report, with many more details, is available on the Internet at: http://usda.mannlib.cornell.edu/reports/nassr/other/zfc-bb/floran05.txt.

[^0]:    ${ }^{1 /}$ Wholesale value of sales as reported by growers with $\$ 100,000$ or more in sales of floriculture crops plus a calculated wholesale value of sales for growers with sales below $\$ 100,000$. The value of sales for growers below the $\$ 100,000$ level was estimated by multiplying the number of growers in each size group by the mid-point of each dollar value range.
