Subject: New proposed air patterns in Las Vegas

Dear Ms. Hassert,

I am writing in regard to the workshops being held referencing the proposed changes to air traffic patterns in southern Nevada, primarily the far west side of the Las Vegas valley. It is of my utmost concern that these workshops aren't being held in the neighborhoods being affected by these proposed changes, they are being held in areas not even affected by this proposition. Secondly, as stated to me by several of my neighbors in the Ridges area of Summerlin, an area which is currently not affected by such obtrusive noise pollution, would be tremendously impacted by such a change. It is unfortunate that this change is being considered being that the area in the current pattern to the southwest is less populated, and its' residents had been notified prior to purchasing their homes of the existing noise pollution. Please reconsider your amended traffic pattern and keep it as it is. Also, please consider holding more workshops in the area specifically being affected by these proposed changes.

P520-1

P520-2

Thank you for your attention regarding this matter.

Respectfully,

Brian L. Fike
