GCP - Grand Canyon NP

Predictive Services Discussion: Warmer and drier in the West. Much of the West will see warmer and drier weather today with an area of gusty winds stretching from southern Nevada to Wyoming. Most of the Southeast will be hot and dry except for thundershowers over Florida.

## Attempting A Frontal Assault On A Fire

Attempting a frontal assault on a fire is recognized as Watchout Situation \#10 and is a potentially dangerous tactic.

- If your tactics include a frontal assault, the following checklist must be adequately addressed before engaging the fire:
- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible. (Anchor points, safety zones, escape routes, etc.)
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?
- Do you have adequate resources to complete the assault? Discuss things you need to consider; for example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics, and hazards? Consider what could happen if someone has a different approach than you; i.e., the IC has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.

In order to reduce the risks, reassess your tactics, post lookouts, identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
