# COMMERCIAL SOURCES OF CONSERVATION PLANT MATERIALS<sup>1</sup>

This list is not complete and does not constitute a guarantee of reliability or quality of product. Some species in this list are considered invasive. This is NOT a list of RECOMMENDED species. This list should be used as a reference tool for developing conservation alternatives. The Natural Resources Conservation Service (NRCS) does not endorse any supplier and no discrimination is intended by omission.

Plants are listed alphabetically by common name. The numbers after each plant refer to the suppliers who have handled the seed and/or plants. Named varieties are listed along with the cultivars developed by the NRCS Plant Materials Program. The suppliers are comprised of seed companies, nurseries and growers. Current price lists and availability of plant materials may be obtained from suppliers on request. Always consult your local dealer first. If the plant material is not listed, contact various vendors to determine source and availability.

Additions or corrections to this list should be forwarded to the Arizona Plant Resource Specialist (520-292-2999) so an accurate list can be maintained. **This list is also available from the internet at--<http://az.nrcs.usda.gov>. At this home page you go into technical resources, then section 1 of the Field Office Technical Guide.**
