

## The NTP High Throughput Screening (HTS) Initiative

The NTP Roadmap for the 21st Century includes a major initiative to develop HTS assays to:

- identify mechanisms of action for further investigation
- develop predictive models for biological response
- prioritize substances for further toxicological evaluation

In support of this initiative, on December 14 and 15, 2005 in Arlington, VA, the NTP sponsored an HTS Assay Workshop to obtain input on HTS technology and the approach the NTP should take to implement these assays in its testing program<sup>1</sup>. In addition, at this Workshop, members of the NIH Molecular Libraries Initiative (MLI), a part of the NIH Roadmap for Medical Research, presented information about their program.

In July 2005, the NTP became a formal participant in the MLI. The MLI is focusing on the use of high-technology screening methods to identify small molecules that can be optimized as chemical probes to study the functions of genes, cells, and biochemical pathways. The NTP, through its association with the MLI, has the opportunity to generate information that links data on the biological activity of substances generated from biochemical and cell-based HTS assays with toxicity endpoints identified in the NTP's toxicology testing program. To achieve this goal, in August 2005, the NTP began a formal collaboration with the NIH Chemical Genomics Center (NCGC) to test substances of interest to the NTP across a spectrum of HTS assays. The NCGC is one of 10 HTS centers around the country that comprise the NIH Molecular Libraries Screening Center Network (MLSCN).

Late in 2005, the NTP supplied six cell-based assays to the NCGC. These assays included two for cytotoxicity (CellTiter-Glo which measures ATP levels, Cytotox-One which measures LDH release), three for specific caspase enzyme activity associated with apoptosis (Caspase 3/7, Caspase 8, and Caspase 9), and one for activity associated with a cell membrane g-glycoprotein pump that is responsible for drug resistance (pgp-Glo Assay). These assays were selected largely because:

- it appeared that they could easily be optimized for use in the 1536-well robotics assay format used by the NCGC,
- the endpoints could be of interest from a toxicological viewpoint, and
- it was thought that the data generated by these tests could be used to establish the bioinformatic procedures needed to appropriately mine the extraordinary large sets of chemical, biological, and toxicological data that would result from HTS testing.

By January 2006, the NTP had provided a total of 1408 test substances to the NCGC (Appendix 1). Based on the plate design used by the NCGC, 1408 represents the number of chemicals that are tested per 1536-well plate. These substances were selected because all have been evaluated in one or more NTP toxicological tests or were reference substances identified by the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM) for the development and validation of alternative *in vitro* test methods in specific regulatory testing areas (e.g., acute toxicity, dermal corrosion, endocrine activity). Selection was based also on

<sup>1</sup> Information on the program and copies of the presentations can be obtained at <http://ntp.niehs.nih.gov/index.cfm?objectid=E13C3474-F1F6-975E-7CA9B6918AE38EF4>

availability, volatility, potential risk (e.g., dioxin), and solubility in DMSO (at 10 mM). The list includes 55 duplicate compounds to evaluate assay reliability. The list of test substances sent to the NCGC includes nearly every chemical class for small molecules imaginable. Molecular weights ranged from approximately 100 to 400. Functionally, the list includes solvents, fire retardants, preservatives, flavoring agents, plasticizers, therapeutic agents, inorganic and organic pollutants, drinking water disinfection byproducts, pesticides and natural products. Recently, the MLSCN has decided to place the majority of the NTP 1408 in the MLSCN chemical repository in order to make them available as a specialty compound set to other members of the network.

To date, the NCGC has tested the NTP collection of 1408 chemicals, using 14-point concentration response curves (0.5 nM to 92  $\mu$ M in 5  $\mu$ L/well) in the:

- CellTiter-Glo cytotoxicity assay, in nine human and four rodent cell types. The cell types originated from various organs (although most of the cell types were immortal cell lines derived from tumors), with some matching rodent cell types to compare responses across species. The cell types used were:
  - BJ (human foreskin fibroblasts)
  - HEK293 (human embryonic kidney)
  - HepG2 (human hepatocellular carcinoma)
  - HUV-EC-C (normal human vascular endothelial cells)
  - Jurkat (Clone E6-1, human T cell leukemia)
  - MRC-5 (human lung fibroblasts)
  - SK-N-SH [human neuroblastoma]
  - SK-SY5Y (human neuroblastoma)
  - Proximal tubules (primary cells from rat kidney)
  - H-4-II-E (rat hepatoma)
  - N2a (mouse neuroblastoma)
  - NIH 3T3 (immortal mouse fibroblasts)

The concentration response data from these studies have been evaluated by the NCGC and in-house at NIEHS to identify actives. Also, the NCGC is also using real time cell electronic sensing (RT-CES) to evaluate the kinetics of cytotoxicity for selected compounds. This information allows for further classifying the cytotoxic compounds according to differences in response kinetics.

- Caspase 3,7 assay, in six human and three rodent cell types. The cell types used were:
  - BJ (human foreskin fibroblasts)
  - HEK293 (human embryonic kidney)
  - HepG2 (human hepatocellular carcinoma)
  - HUV-EC-C (normal human vascular endothelial cells)
  - Jurkat (Clone E6-1, human T cell leukemia)
  - SK-SY5Y (human neuroblastoma)
  - H-4-II-E (rat hepatoma)
  - N2a (mouse neuroblastoma)
  - NIH 3T3 (immortal mouse fibroblasts)

The concentration response data from these studies are being evaluated by the NCGC and in-house at NIEHS to identify actives.

- Cytotox-One (LDH release) assay, in one human and one rodent cell type. The cell types used were (more cell types are anticipated):
  - HEK293 (human hepatocellular carcinoma)
  - Proximal tubules (primary cells from rat kidney)

The NCGC intends also to tests the NTP 1408 as part of their in-house library of about 80,000 compounds in as many as 60 other assays currently established at their facility (see Appendix 2). To date, this has included:

- Anthrax LF BLA
- $\beta$ -lactamase (AmpC)
- $\beta$ -Thal mRNA splicing GPF
- Cell signaling CRE-BLA
- DNA polymerase III
- Hsp90 co-chaperone interaction
- Huntington PC12 cell toxicity
- JNK alphascreen
- IkB $\alpha$  Cell sensor Dual Luc
- O-Glc NAc Transferase
- Peroxiredoxins (Tgr-Trx-Prx)
- Tau polymerization
- YjeE FP

The normalized concentration response data from these assays are (or will be) publicly available on PubChem (<http://pubchem.ncbi.nlm.nih.gov/>).

In December 2005, a collaboration was established between the NTP HTS Faculty and the EPA Chemical Prioritization Community of Practice (CPCP) to jointly evaluate HTS assays and other model systems for their use in toxicological investigations and in chemical prioritization. In February 2006, three joint NTP-EPA focus groups were established:

- Toxicity Targets and Bioactivity Assays, the purpose of which is to identify toxicity targets and bioactivity assays targets of interest relating to various toxicities, and relevant in silico, HTS, and high content screening assays
- Chemical Selection, the purpose of which is to identify and coordinate the testing of chemicals of interest to the NTP and the EPA
- Informatics, the purpose of which is to develop and/or identify appropriate tools for chemical and biological data analysis and management across multiple databases.

This collaboration has been useful in several ways:

- The EPA recently provided approximately 400 pesticide actives and ten nuclear receptor assays (Era, LXRB, FXR, AR, PPAR $\gamma$ , TR $\beta$ , RXRA, VDR, PPARD, GR) to the NCGC. Among the pesticide actives are approximately 60 compounds that were included in the NTP 1408. This will provide for an assessment of assay reproducibility across time. There is also the intent to test the NTP 1408 in the nuclear receptor assays.

- The EPA has established a number of contracts to support their HTS and high-content assay initiatives<sup>2</sup>. Potentially, the NTP has the ability to use these resources.

To broaden exposure to HTS concepts as they apply to toxicology testing within the NIEHS/NTP and its CPCP counterpart at the EPA, the NTP hosted the directors of the NCGC in a day-long Chemical Genomics 101 course, held at NIEHS in RTP on April 20, 2006. Approximately 100 scientists from NIEHS, EPA, and non-government organizations attended.

To increase awareness of this Initiative, three coordinated posters were presented that related to the HTS activities at the 2007 Annual Meeting of the Society of Toxicology (March 25-28).

- The National Toxicology Program (NTP) High Throughput Screening (HTS) Initiative: Current Status and Future Directions, by R. R. Tice, J. Fostel, C. S. Smith, K. L. Witt, J. H. Freedman, C. J. Portier, A. D. Dearry, and J. R. Bucher
- Chemical Compound Profiling of Cell-based Toxicity Assays Using Quantitative High-Throughput Screening, by M. Xia, K. Witt, N. Southall, M-H. Cho, A. Jadhav, R. Huang, C. Smith, J. Fostel, R. Tice, J. Inglese, and C. Austin
- The National Toxicology Program (NTP) High Throughput Screening (HTS) Initiative: Chemical Selection - Round 1, by C. Smith, J. Bucher, A. Dearry, C. Portier, R. Tice, K. Witt, and B. Collins

Also, in collaboration with the EPA, the NCGC, and Pharma, the NTP organized a symposium at the 2007 annual meeting (April 15-19) of the Society for Biomolecular Sciences entitled “Toxicity Profiling using High-Throughput and High-Content Technologies”. The purpose of this session was to discuss the challenges associated with the use of HTS and high content screening assays to identify activities of diverse chemical compounds in toxicity-relevant assays, to facilitate the development of predictive *in vitro* models for toxicity, and to help prioritize substances for further toxicological evaluation.

## Appendix 1. NTP 1408 Compounds Provided to the NCGC for HTS

Substance	CASRN	Substance	CASRN
Acetaldehyde	75-07-0	Benzidine	92-87-5
Acetaminophen (4-hydroxyacetanilide)	103-90-2	Benzofuran	271-89-6
Acetohexamide	968-81-0	Benzoic acid	65-85-0
Acetonitrile	75-05-8	Benzoin	119-53-9
1-Acetyl-2-phenyl hydrazide	114-83-0	p-Quinone	106-51-4
Acrolein	107-02-8	2,2'-Dithiobis-benzothiazole	120-78-5
Acrylamide	79-06-1	1,2,3-Benzotriazole	95-14-7
Acrylonitrile	107-13-1	Benzotrichloride	98-07-7
Actinomycin D	50-76-0	Benzyl acetate	140-11-4
Adipamide	628-94-4	Benzyl alcohol	100-51-6
Aldicarb	116-06-3	Benzyl chloride	100-44-7
Aldrin	309-00-2	o-Benzyl-p-chlorophenol	120-32-1
Allyl alcohol	107-18-6	Biphenyl	92-52-4
Allyl chloride	107-05-1	Bis(2-chloroethyl)ether	111-44-4
Allyl glycidyl ether	106-92-3	Bisphenol A	80-05-7
Allyl isothiocyanate	57-06-7	HC blue 2	33229-34-4
3-Amino-4-ethoxyacetanilide	17026-81-2	Boric acid	10043-35-3
1-Amino-2-methylanthraquinone	82-28-0	Bromodichloromethane	75-27-4
2-Amino-4-nitrophenol	99-57-0	Bromoethane (ethyl bromide)	74-96-4
2-Amino-5-nitrophenol	121-88-0	2-Bromo-1-ethanol	540-51-2
4-Amino-2-nitrophenol	119-34-6	Butyl benzyl phthalate	85-68-7
2-Amino-5-nitrothiazole	121-66-4	n-Butyl chloride	109-69-3
2-Aminoanthraquinone	117-79-3	n-Butyl-p-hydroxybenzoate	94-26-8
o-Aminoazotoluene	97-56-3	Butylated hydroxytoluene	128-37-0
4-Biphenylamine	92-67-1	t-Butylhydroquinone	1948-33-0
Ampicillin trihydrate	7177-48-2	beta-Butyrolactone	3068-88-0
Anethole	104-46-1	Cadmium chloride	10108-64-2
Anilazine	101-05-3	Caffeine	58-08-2
Aniline	62-53-3	Capsaicin	404-86-4
p-Anisidine hydrochloride	20265-97-8	Captan	133-06-2
o-Anthranilic acid	118-92-3	Semicarbazide hydrochloride	563-41-7
L-Ascorbic acid	50-81-7	Carbarsone	121-59-5
Aspartame	22839-47-0	Carbaryl	63-25-2
Acetylsalicylic acid	50-78-2	Carbazole	86-74-8
Atrazine	1912-24-9	Carbon tetrachloride	56-23-5
Auramine	2465-27-2	D-Carvone	2244-16-8
5-Azacytidine	320-67-2	Catechol	120-80-9
6-Azacytidine	3131-60-0	Chloramben	133-90-4
Azathioprine	446-86-6	Chlorambucil	305-03-3
Sodium azide	26628-22-8	Chloramphenicol	56-75-7
Azinphosmethyl	86-50-0	Chloranil	118-75-2
Azobenzene	103-33-3	Chloreindic acid	115-28-6
3'-Azido-3'-deoxythymidine (AIDS)	30516-87-1	3-Chloro-4-(dichloromethyl)-5-hydroxy-2(5H)-furanone(MX)	77439-76-0
Benzaldehyde	100-52-7	2-Chloronitrobenzene	88-73-3
Benzene	71-43-2	4-Chloronitrobenzene	100-00-5

Substance	CASRN	Substance	CASRN
4-Chloro-o-phenylenediamine	95-83-0	1,2-Dichlorobenzene (o-dichlorobenzene)	95-50-1
2-Chloro-p-phenylenediamine sulfate	61702-44-1	3,3'-Dichlorobenzidine dihydrochloride	612-83-9
3-Chloro-p-toluidine	95-74-9	trans-1,4-Dichloro-2-butene	110-57-6
5-Chloro-o-toluidine	95-79-4	1,1-Dichloroethane	75-34-3
2-Chloroacetophenone (CN)	532-27-4	1,2-Dichloroethane	107-06-2
4-(Chloroacetyl)acetanilide	140-49-8	2,4-Dichlorophenol	120-83-2
p-Chloroaniline	106-47-8	2,4-Dichlorophenoxyacetic acid	94-75-7
Chlorobenzene	108-90-7	Butyl(2,4-dichlorophenoxy) acetate	94-80-4
Chlorodibromomethane	124-48-1	1,2-Dichloropropane (propylene dichloride)	78-87-5
Chloroform	67-66-3	Dichlorvos	62-73-7
2-Chloromethylpyridine hydrochloride	6959-47-3	Dicofol	115-32-2
Monuron	150-68-5	N,N'-Dicyclohexylthiourea	1212-29-9
Chloropicrin	76-06-2	Dieldrin	60-57-1
Chlorpheniramine maleate	113-92-8	Chlorpyrifos (Dursban)	2921-88-2
Chlorpropamide	94-20-2	Diethylene glycol	111-46-6
Chromium (III) acetate	1066-30-4	Diethylstilbestrol	56-53-1
Danthron	117-10-2	N,N'-Diethylthiourea	105-55-5
Cimetidine	51481-61-9	3,4-Dihydrocoumarin	119-84-6
1,2,3-Propanetricarboxylic acid, 2-hydroxy-	77-92-9	Dimethoxane	828-00-2
Cobalt sulfate heptahydrate	10026-24-1	2,4-Dimethoxyaniline hydrochloride	54150-69-5
Coumarin	91-64-5	3,3'-Dimethoxybenzidine-4,4'-diisocyanate	91-93-0
m-Cresidine	102-50-1	4-Dimethylaminoazobenzene	60-11-7
p-Cresidine	120-71-8	4-Dimethylaminoantipyrine	58-15-1
Cupferron	135-20-6	N,N-Dimethylaniline	121-69-7
beta-Cyclodextrin	7585-39-9	7,12-Dimethylbenzanthracene	57-97-6
Cyclohexanone	108-94-1	Dimethylcarbamoyl chloride	79-44-7
Cyproterone acetate	427-51-0	Dimethylformamide	68-12-2
Dacarbazine	3/4/42	Dimethylvinyl chloride (DMVC)	513-37-1
Daminozide	1596-84-5	2,4-Dinitrophenol	51-28-5
4,4'-Sulfonyldianiline (Dapsone)	80-08-0	2,6-Dinitrotoluene	606-20-2
o,p'-DDD	53-19-0	N,N'-Diphenyl-p-phenylenediamine	74-31-7
Tetrachlorodiphenylethane	72-54-8	5,5-Diphenylhydantoin (phenytoin)	57-41-0
p,p'-Dichlorodiphenyl dichloroethylene	72-55-9	2,5-Dithiobiurea	142-46-1
Dichlorodiphenyltrichloroethane (DDT)	50-29-3	Endosulfan	115-29-7
Dexamethazone	50-02-2	Epichlorhydrin	106-89-8
Diallyl phthalate	131-17-9	1,2-Epoxybutane	106-88-7
2,4-Diaminotoluene (2,4-toluene diamine)	95-80-7	17beta-Estradiol	50-28-2
Diazinon	333-41-5	Estragole	140-67-0
Dibenz(a,h)anthracene	53-70-3	Ethinyl estradiol	57-63-6
1,2-Dibromo-3-chloropropane	96-12-8	Ethionamide	536-33-4
1,2-Dibromoethane	106-93-4	2-Eethoxybenzamide	938-73-8
Dibromomannitol	488-41-5	Ethoxyquin	91-53-2
Dichloran	99-30-9	Ethanol	64-17-5
2,6-Dichloro-p-phenylenediamine	609-20-1	Ethyl bromoacetate	105-36-2
Dichloroacetic acid	79-43-6	Di(p-ethylphenyl)dichloroethane	72-56-0

Substance	CASRN	Substance	CASRN

## Appendix 2. Other HTS Assays Available at the NCGC

Project Name	Disease application (if any)	Project Name	Disease application (if any)
Acrosome reaction GFP		Malaria PSAC	Malaria
Anthrax LF BLA	Anthrax	Multi-protein DNA	
ATR Activation	Ataxia telangiectasia (OMIM 607585)	Replication System	
b-AdrR PCA bifructated		O-Glc NAc Transferase	
GFP		Opsin trafficking	Retinitis pigmentosa (OMIM 180380)
b-lactamase (AmpC)		ALPHA	ADHD
b-glucocerebrosidase FI	Gaucher disease (OMIM 230800)	orphan GPCR -ADHD	
b-Thal mRNA splicing		Oxidoreductase HADH2	
GPF	Beta-thalassemia	Oxidoreductase DCXR	
Cell signaling AP-1-BLA		Oxidoreductase	
Cell signaling CRE-BLA		HSD17b4	
Cell signaling HRE-BLA		Oxidoreductase retSDR3	
Cell signaling M1 NTR		Oxidoreductase SPR	
Cell signaling NFAT-		P450 CYP1A2, Luc	
BLA		P450 CYP2C9, Luc	
Cell signaling SIE-BLA		P450 CYP2C19, Luc	
Cell Translocation GR-		P450 CYP2D6, Luc	
EFC		P450 CYP3A4, Luc	
Cell Translocation GR-		Pantothenate Kinase	Tuberculosis
GFP		Peroxiredoxins (Tgr-	Schistosomiasis
Cell Translocation p65		Trx-Prx)	
HaloTag		PI5K4Pbeta	Diabetes
cLANA	HSV	Progeria mRNA splicing	Progeria (OMIM
Cpd aggregation FRET-1		GFP/RFP	176670)
(AggFRET)		Proteosome ubiquitin-GFP	Various
DNA damage GFP-x		PyruvateKinase Luc	Hemolytic anemia
gene		RAS-RAF PCA	(OMIM 266200)
DNA polymerase III		bifructated GFP	
Drosophila Fat cell GFP		Sialic aciduria	Sialuria (OMIM
ER/GR Translocation			269921)
Fluor-DNA		SMA Cellular promoter	Spinal Muscular
displacement-1		act BLA	Atrophy (OMIM
Fluorescent Profiling-1			253300)
GPVI Luciferase		Tau polymerization	Alzheimer,
HIV Nucleocapsid FP			Frontotemporal
Hsp90 co-chaperone		TF assay-cancer	dementia (OMIM
interaction		TPO Luciferase	600274)
Huntingtin PC12 cell	Huntington's Disease	Ubiquitin Pathway	Cancer
toxicity	(OMIM 143100)	YjeE FP	Thrombocytopenia
IkBa Cell sensor Dual			Various
Luc	Rare lymphomas		
JNK ALPHAScreen			
Locus Derepression			
Assay-1 GFP			
Luciferase profiling
