

DR. KEELING: MY NAME IS RALPH KEELING FROM  
25 SCRIPPS.

0646

1 I'VE HEARD SOME DISCUSSION ABOUT COMBINING  
2 BIOFUELS WITH SEQUESTRATION THAT ACTUALLY SCRUB THE  
3 ATMOSPHERE, BECAUSE THE NET EFFECT OF GROWING THE  
4 PLANT AND THEN PUMPING THE CO2 BELOW GROUND IS  
5 ACTUALLY TO REVERSE THE RELEASE. I ASSUME THAT COSTS  
6 MORE, BUT I WOULD BE INTERESTED TO KNOW WHAT THE  
7 OUTLOOK IS.

8 DR. FRIEDMANN: PRINCETON ACTUALLY LED THE  
9 CHARGE ON THIS, AND BOB WILLIAMS HAS SORT OF PUSHED  
10 THAT, BOTH THE SEQUESTRATION IN THE SOILS AND ALSO  
11 THE ABATEMENT FROM PLANTS QUITE A BIT.

12 THE DEPARTMENT OF ENERGY HAS JUST BEGUN A  
13 FORMAL TASK TO SORT OF UNDERSTAND WHAT THE REAL  
14 ABATEMENT POTENTIAL FOR THAT TECHNOLOGY IS. THAT,  
15 ACTUALLY, IS QUITE PROMISING. IT'S ONE OF THE FEW  
16 WAYS -- IF YOU DO COAL-TO-LIQUIDS TECHNOLOGY WITH  
17 CARBON CAPTURE AND SEQUESTRATION AND WITH 12-PERCENT  
18 BIOMASS COAL-FIRING, THE ARGUMENT IS YOU CAN COME  
19 CLOSE TO A CARBON-NEUTRAL FUEL. THAT REMAINS TO BE  
20 PROVEN, BUT THAT'S THE ARGUMENT.

21 I WOULD SAY -- AND I DIDN'T HAVE A CHANCE  
22 TO MENTION THIS BECAUSE I RAN OVERTIME; BUT IF YOU  
23 COMBINE CARBON CAPTURE AND SEQUESTRATION WITH BIOMASS  
24 COMBUSTION, YOU ACTUALLY GET A NEGATIVE EMISSIONS  
25 POWER PLANT.

0647

1 DR. SOCOLOW: WHICH IS WHAT RALPH WAS JUST  
2 OBSERVING.

3 DR. FRIEDMANN: YES, AND THANK YOU FOR  
4 BRINGING THAT UP.

5 DR. SOCOLOW: JUST ADDING ONE MORE ELEMENT  
6 TO THAT, IT WAS CERTAINLY NOTHING WE LEFT OUT ON  
7 PURPOSE.

8 BIOMASS COLLECTION IS EXPENSIVE, AND SO THE  
9 ABILITY TO GET ENOUGH BIOMASS IN A SINGLE SPOT TO  
10 HAVE THE VOLUMES TO ACHIEVE THE EFFICIENCIES OF A  
11 SCALE WITH BIOMASS ALONE IS DIFFICULT. YOU NEED  
12 COAL-FIRE BIOMASS AND COAL-CAPTURE CO2, IT'S LIKE 20  
13 OR 30 PERCENT OF THE PLANT. THE REST OF IT IS COAL.  
14 THE SCALE OF CO2 MANAGEMENT BECOMES A LITTLE CHEAPER,  
15 AND THAT'S ANOTHER REASON WHY THEY, IN SOME SENSE,  
16 MATCH UP. AND SO THIS IS A WRINKLE, IT IS AN ELEMENT  
17 OF THE STORY. STILL, IT'S MOSTLY ABOUT COAL.

18 DR. TANS: PIETER TANS FROM EARTH SYSTEMS  
19 RESEARCH LABORATORY.

20 I DON'T HAVE A QUESTION; I HAVE A COMMENT.  
21 SOMETIME AGO I DID AN ESTIMATE OF WHAT IT WOULD TAKE  
22 IN TERMS OF DETECTION CAPABILITY TO SEE IN THE  
23 ATMOSPHERE WHETHER ANY OF THESE THINGS ARE LEAKING.  
24 THE NICE THING ABOUT SEQUESTERING CO2 IN GEOLOGICAL  
25 RESERVOIRS, FROM OUR POINT OF VIEW AS MEASUREMENT

0648

1 PEOPLE, IS THEY HAVE NO C-14 IN THEM, AND IT IS  
2 ACTUALLY RELATIVELY EASY TO DETECT THAT WITH EXISTING

3 METHODS. IT WOULD BE CHEAP, TOO. SO I'M NOT WORRIED  
4 ABOUT THAT.

5 DR. FRIEDMANN: WELL, THANK YOU FOR  
6 MENTIONING THAT. I DO WANT TO SAY, ACTUALLY, THAT WE  
7 ARE PURSUING THAT EXACT ISSUE AT LIVERMORE, WONDERING  
8 IF WE CAN USE THE ACCELERATOR MASS SPECTROMETRY  
9 FACILITY THERE, CAM'S, TO DO FOSSIL FUEL EMISSION  
10 VERIFICATION.

11 DR. FIELD: CHRIS FIELD, CARNEGIE  
12 INSTITUTION.

13 I WANTED TO TALK A LITTLE BIT MORE ABOUT  
14 THE LARGE NUMBER OF BLACK STARS ON JULIO'S MAP THAT  
15 HAVE NO PLANS FOR FUTURE CAPTURE AND STORAGE; AND I  
16 UNDERSTOOD FROM YOUR PRESENTATION THAT THE COST OF  
17 DOING POST-COMBUSTION CAPTURE AND STORAGE WASN'T  
18 NECESSARILY GREATER THAN ANY OF THE OTHER APPROACHES;  
19 AND I WONDER IF THERE WERE A SMALL SUBSET OF THINGS  
20 THAT COULD BE DONE IN ORDER TO OPEN THE PATH TO  
21 FUTURE INTEGRATION OF CAPTURE AND STORAGE  
22 TECHNOLOGIES IN THE EXISTING THINGS. IS THAT  
23 SOMETHING WE REALLY OUGHT TO BE PUTTING A PRIORITY ON  
24 IN THE NEXT FEW YEARS?

25 DR. FRIEDMANN: SURE. TWO THINGS QUICKLY:

0649

1 ONE IS IF YOU CAME AWAY WITH THE IMPRESSION THAT IT  
2 WOULDN'T COST MORE TO DO THAT, THAT WAS INACCURATE.  
3 IT DOES COST MORE. THERE IS JUST NOT A TECHNICAL  
4 BARRIER TO DOING IT.

5 BUT, ESSENTIALLY, WHAT YOU'LL DO IF YOU  
6 JUST PUT THE CAPTURE DEVICE ON AND RUN IT FROM THE  
7 SAME POWER PLANT, YOU'LL TURN A 1,000-MEGAWATT POWER  
8 PLANT INTO A 750-MEGAWATT POWER PLANT; THAT IS REALLY  
9 NOT VERY ATTRACTIVE FOR MANY REASONS.

10 PEOPLE HAVE TALKED ABOUT THE IDEA OF  
11 CARBON-READY OR SEQUESTRATION-READY POWER PLANTS; AND  
12 DAVID HAWKINS HAS A QUOTE TO SAY ABOUT THAT, WHICH  
13 IS: "USING THAT KIND OF LOGIC, MY DRIVEWAY IS  
14 FERRARI-READY."

15 PUTTING SORT OF A SKID NEXT TO A PLANT AND  
16 SAYING, WE'RE GOING TO BUILD SOMETHING THERE LATER,  
17 DOESN'T ACTUALLY GET YOU MUCH. THE REASON WHY IS,  
18 BECAUSE IN ORDER TO AVOID THE SCENARIO I JUST TALKED  
19 ABOUT, WHERE YOU EITHER HAVE TO BUILD A WHOLE NEW  
20 POWER PLANT OR DERATE YOUR EXISTING PLANT, YOU  
21 ACTUALLY HAVE TO INTEGRATE THE ENGINEERING WITH THE  
22 CAPTURE DEVICE INTO THE DESIGN OF THE PLANT. AND SO  
23 THE INDUSTRY THAT DEALS WITH SORT OF IGCC DEPLOYMENT  
24 AND SO FORTH VERY QUICKLY RECOGNIZED THAT A  
25 SEQUESTRATION-READY IGCC PLANT WAS KIND OF LIKE A

0650

1 UNICORN, AND THAT THEY REALLY HAD TO START THINKING  
2 ABOUT THIS INTEGRATED DESIGN QUESTION MORE CAREFULLY  
3 AND TRY TO UNDERSTAND HOW TO AMORTIZE THOSE COSTS  
4 MORE SENSIBLY.

5 DR. RYERSON: TOM RYERSON FROM NOAA ESRL.

6 I WOULD LIKE TO HEAR WHAT YOU THINK ABOUT A  
7 PRUDENT ENGINEERING OPTION THAT WOULD INCLUDE

8 SOMETHING LIKE A PLAN B. YOU'VE GOT A SUCCESSFUL  
9 CAPTURE PROGRAM GOING WORLDWIDE, AND YOU'VE GOT  
10 GIGATONS OF CO2 STORED UNDERGROUND. THE LONGEST TERM  
11 YOU POINTED OUT WAS MAYBE 35 YEARS OF DOING THIS ON A  
12 COMMERCIAL SCALE. BUT WE'RE WORRIED ABOUT GEOLOGIC  
13 TIMES HERE AND THE LIFETIME OF CO2 IN THE ATMOSPHERE,  
14 COUPLED WITH THE LIFETIME THAT YOU KNOW THESE THINGS  
15 HAVE WORTH DOESN'T REALLY FILL ME WITH CONFIDENCE  
16 QUITE YET.

17 SO IS THERE ANY PLAN IF YOU WERE TO NOTICE  
18 LEAKS OR FRACTURING OR WELL MECHANICAL FAILURE, IS  
19 THERE ANY WAY BEFORE IT IS SEQUESTERED CHEMICALLY  
20 UNDERGROUND TO REMOVE THE LIQUID AND MOVE IT  
21 SOMEWHERE ELSE THAT'S NOT YET LEAKING?

22 DR. FRIEDMANN: A COUPLE OF RESPONSES TO  
23 THAT. ONE OF THEM IS THAT THERE ARE ACTUALLY A  
24 NUMBER OF VIABLE OFF-THE-SHELF MITIGATION  
25 TECHNOLOGIES IF SOMETHING SHOULD GO WRONG. AND THAT

0651

1 WAS SORT OF THE HEART OF YOUR QUESTION. IT WOULDN'T  
2 SO MUCH INVOLVE ABANDONING A SITE NECESSARILY AND  
3 MOVING THE CO2 TO SOME OTHER SITE. IT WOULD BE MORE  
4 LIKELY SAYING, OH, GOSH, THE WELLS THERE ARE LEAKING,  
5 SO LET'S PLUG THE WELLS. YOU MIGHT DEPRESSURIZE ONE  
6 PIECE OF THE FIELD AND MANAGE THE RESERVOIR AT THE  
7 SUBSURFACE.

8 THERE ARE ALSO -- BY THE WAY, ALL OF THE  
9 STUFF THAT I PUT UP THERE WAS ON THE ASSUMPTION THAT  
10 ALL YOU DID WAS INJECT AND WALK AWAY. WE HAVEN'T  
11 EVEN STARTED INVESTING YET IN THE OPPORTUNITIES OF  
12 ACTUALLY REALLY ENGINEERING THE RESERVOIR TO, SAY,  
13 ACCELERATE THE RATE OF DISSOLUTION. BUT WITH RESPECT  
14 TO THE BURDEN OF FUTURE GENERATIONS AROUND THE IDEA  
15 THAT SOMEHOW IN 1,000 YEARS, THERE WILL BE A PROBLEM,  
16 WE DO BELIEVE THAT THE RISKS GO DOWN OVER TIME; THEY  
17 DON'T GO UP. WE DON'T NECESSARILY KNOW WHERE THE  
18 SAFE THRESHOLD IS. BUT THE WHOLE PURPOSE OF THIS IS  
19 NOT TO STORE CO2 FOREVER. THE PURPOSE OF THIS IS TO  
20 KEEP IT OUT OF THE ATMOSPHERE AS A BRIDGING  
21 TECHNOLOGY AND BUY US SOME TIME UNTIL WE GET A  
22 DECARBONIZED ENERGY FUTURE. AND SO IN OUR COMMUNITY  
23 -- AND WE HAVE ASSIDUOUSLY AVOIDED A YUCCA MOUNTAIN  
24 SORT OF STANDARD; AND, INSTEAD, TRY TO THINK ABOUT,  
25 WELL, IS 500 YEARS GOOD ENOUGH, IS 1,000 YEARS GOOD

0652

1 ENOUGH, WHAT QUALIFIES GOOD ENOUGH. AND THAT'S AN  
2 ACTIVE DEBATE.

3 DR. SOLOW: IF I CAN JUST GLOSS THAT A  
4 SECOND. WE'VE ALL THOUGHT ABOUT HOW TO DESCRIBE RISK  
5 AND TO DISTINGUISH THE SLOW LEAK, YOU'VE LOST YOUR  
6 INVESTMENT IF YOU CAN'T DO ANYTHING ABOUT IT. IT HAS  
7 TO BE REINJECTED. ANOTHER PROJECT HAS TO COMPENSATE  
8 FOR IT. INSURANCE HAS PAID YOU OFF. YOU'VE PAID THE  
9 GOVERNMENT BACK BECAUSE YOUR SITE WASN'T ANY GOOD.  
10 NOBODY GOT HURT.

11 VERSUS AN ACUTE LEAK, A MAJOR SPILL, AND  
12 THEN PEOPLE DO GET HURT.

13 JULIO WAS TALKING JUST THEN ABOUT THE SLOW  
14 LEAK, SOMETHING DOESN'T ACTUALLY WORK, IT GOES BACK  
15 INTO THE ATMOSPHERE. WE CAN LIVE WITH THAT.

16 ACUTE LEAKS, WE CAN'T. AND SO THE  
17 ADDITIONAL PART OF THE STORY, WHICH JULIO CAN COMMENT  
18 ON: ARE THERE ANY CREDIBLE SCENARIOS WHERE THERE IS  
19 AN ACUTE LEAK OVER NOW OR 500 YEARS FROM NOW?

20 WHY DON'T YOU ANSWER THAT.

21 DR. FRIEDMANN: YEAH, I WOULD CERTAINLY SAY  
22 THAT WE HAVEN'T, YOU KNOW, EXHAUSTIVELY PURSUED THAT  
23 AND ANSWERED IT. WHAT I HAVE SAID IS WE, AS A  
24 COMMUNITY, TOOK THAT VERY SERIOUSLY AND TRIED TO  
25 BREAK IT APART AS WE COULD. WE SAID, LOOK, LET'S

0653

1 ASSUME WE'VE CHOSEN A BAD SITE, LET'S RUN IT INTO  
2 LIMESTONES THAT DISSOLVE. YOU KNOW, LET'S LET A  
3 NUMBER OF THINGS FAIL SPECTACULARLY AND SEE WHAT  
4 HAPPENS.

5 ONE OF THE THINGS WE'VE FOUND IS THAT  
6 BECAUSE THE CRUST IS WELL-CONFIGURED TO STORE CO<sub>2</sub>,  
7 ALMOST ALL THE FEEDBACKS ARE NEGATIVE. SO EVEN IF  
8 YOU CHOOSE A BAD SITE, THEY TEND TO MANAGE THEMSELVES  
9 PRETTY WELL.

10 IT'S NOT TO SAY THAT THERE AREN'T SCENARIOS  
11 IN WHICH THAT DOESN'T HAPPEN; BUT FOR THE MOST PART,  
12 THAT SEEMS TO BE THE CASE.

13 THE ONE PLACE WHERE YOU REALLY NEED TO  
14 WORRY IS IF HEAT GETS ADDED INTO THE SYSTEM, BECAUSE  
15 WHEN YOU START TO HEAT CO<sub>2</sub>, THEN IT DOES EXPAND, AND  
16 THE FEEDBACKS BECOME POSITIVE. AND THAT IS,  
17 BASICALLY, A QUESTION OF SITING MORE THAN ANYTHING  
18 ELSE.

19 IF A VOLCANO SHOULD ERUPT INTO A CO<sub>2</sub>  
20 STORAGE FACILITY, I DARE SAY WE'D ACTUALLY WORRY  
21 ABOUT THE CO<sub>2</sub> EMISSIONS FROM THE VOLCANO A BIT MORE.

22 DR. WEISS: A BRIEF QUESTION -- RAY WEISS  
23 FROM SCRIPPS -- TO FOLLOW UP ON PIETER TANS' COMMENT:  
24 HAS THERE BEEN ANY EFFORT TO PUT TRACERS INTO  
25 SEQUESTERED CO<sub>2</sub> SO THAT IT MIGHT BE EASIER TO DETECT

0654

1 THEM WITHOUT USING AN ACCELERATOR MASS SPECTROMETER.

2 DR. FRIEDMANN: THERE HAS. TODAY'S TRACER  
3 OF CHOICE IS PERFLUOROCARBONS.

4 (INAUDIBLE COMMENT FROM AUDIENCE)

5 DR. FRIEDMANN: BUT THE WHOLE POINT IS THAT  
6 YOU ALSO CAN DETECT THEM AT THE PARTS PER BILLION  
7 LEVEL, WHICH HAS ITS PLUSES.

8 PEOPLE WALKED AWAY FROM SULFUR HEXAFLUORIDE  
9 AS A TRACER FOR EXACTLY THE REASON YOU MENTIONED.

10 PEOPLE HAVE ALSO LOOKED AT OTHER TRACERS,  
11 LIKE NOBLE GAS TRACERS, WHICH HAVE DISTINCT,  
12 EASILY-RECOGNIZED SIGNATURES. SO IT'S BEEN LOOKED  
13 AT, AND IT'S BEEN TESTED A BIT IN THE FIELD.

14 I DO BELIEVE THAT THERE IS MORE WORK THAT  
15 CAN BE DONE ON THAT. BUT PART OF THE ISSUE HERE IS  
16 THAT, AGAIN, WHAT YOU REALLY SHOULD BE FOCUSING ON IS  
17 A DEVICE THAT YOU CAN STRAP ONTO A WELLHEAD FOR AN

18 ABANDONED WELL WHICH WILL DETECT CO2 QUICKLY BECAUSE  
19 THAT'S REALLY WHERE YOUR PRIMARY RISK IS GOING TO BE.

20 DR. SOCOLOW: A LITTLE GLOSS ON THAT IS THE  
21 PRIVATE SECTOR HAS AN ENORMOUS INTEREST IN TRACERS  
22 BECAUSE THEY DON'T WANT TO BE THE VICTIM OF  
23 UNIDENTIFIED LEAK. THEY WANT TO BE SURE THAT IF  
24 THEIR PRACTICE IS GOOD AND THERE IS SOME KIND OF A  
25 LEAK, A SLOW LEAK, LET'S SAY, IT CAN BE ATTRIBUTED TO

0655

1 SOMEBODY. AND IF THEY HAVE DONE A GOOD JOB, THEY  
2 WON'T END UP PAYING FOR SOMEBODY ELSE'S LEAK. SO THE  
3 CHANCES ARE THAT THE CO2 IS GOING TO HAVE SIGNATURE  
4 INJECTION PROJECT BY INJECTION PROJECT.

5 MR. CICERONE: RALPH CICERONE, NATIONAL  
6 ACADEMY OF SCIENCES.

7 THANKS TO ALL THREE OF YOU FOR SOME  
8 BEAUTIFULLY PREPARED AND THOUGHT-OUT PRESENTATIONS.

9 I THINK MY QUESTION IS FOR CHUCK. WHEN YOU  
10 HAD A SUMMARY SLIDE SHOWING THE COSTS AND POTENTIAL  
11 SAVINGS OF THE OPTIONS THAT YOU EXAMINED TODAY, IT  
12 CAME OUT TO ABOUT \$80 BILLION IN THAT COST SAVINGS,  
13 WHICH IS A WONDERFULLY POSITIVE STORY, WITH  
14 INCENTIVES FOR SHOWING SOME MARKET INCENTIVES.

15 THERE'S ANOTHER WAY TO LOOK AT THAT; AND  
16 THAT'S \$80 BILLION TAKEN OUT OF OTHER PEOPLE'S  
17 BUSINESS THAT THEY WOULD HAVE HAD WITHOUT THESE  
18 OPTIONS.

19 HOW MUCH OPPOSITION ARE THESE TECHNOLOGIES  
20 ENCOUNTERING FROM PEOPLE WHO PERCEIVE THAT THEY'RE  
21 GOING TO LOSE \$80 BILLION OF EXPENDITURES FROM THE  
22 REST OF US?

23 DR. KUTSCHER: WELL, THAT'S AN EXCELLENT  
24 QUESTION.

25 YOU PROBABLY HAVE SEEN THE TV ADS FROM THE  
0656

1 COMPETITIVE ENTERPRISE INSTITUTE TELLING US THAT  
2 CARBON DIOXIDE IS ESSENTIAL TO LIFE. CLEARLY -- AND  
3 THIS IS -- TO ME, THIS IS A REAL DIFFERENCE BETWEEN  
4 WHAT WE FACE WITH GLOBAL WARMING AND WHAT WE FACED  
5 WITH THE OZONE PROBLEM. YOU KNOW, THE INDUSTRY THAT  
6 WAS PRODUCING CHLOROFLUOROCARBONS, WHICH WAS A MUCH  
7 SMALLER INDUSTRY THAN THE INDUSTRY THAT PRODUCES COAL  
8 AND OIL AND NATURAL GAS, AND SO IT'S CLEAR THAT, YOU  
9 KNOW, THERE HAVE BEEN VARIOUS REPORTS ON HOW MUCH  
10 MONEY HAS BEEN SPENT TO ARGUE NOT TO MAKE BIG  
11 CHANGES, YOU KNOW, IN OUR ENERGY ECONOMY.

12 ON THE OTHER HAND, WE'RE SEEING A  
13 TREMENDOUS INTEREST FROM VENTURE CAPITALISTS RIGHT  
14 NOW IN THE WHOLE RENEWABLE ENERGY FIELD. I SHOWED  
15 THAT SLIDE AT THE SOLAR ELECTRIC POWER CONFERENCE,  
16 WHICH WAS REALLY MOSTLY A TRADE SHOW; AND IT IS TRUE  
17 THAT A FEW YEARS AGO THERE WAS 1,000 PEOPLE, AND THIS  
18 YEAR IN LONG BEACH IT WAS 12,500 PEOPLE. AND THERE'S  
19 A BOOK OUT ON CLEAN-TECH TECHNOLOGIES, AND VENTURE  
20 CAPITALISTS LIKE -- WELL, THERE'S A NUMBER OF  
21 DIFFERENT VENTURE CAPITALISTS. I WON'T GO INTO  
22 NAMES. BUT THEY HAVE POURED A LOT OF MONEY INTO WIND

23 POWER AND, PARTICULARLY RIGHT NOW, CONCENTRATING  
24 SOLAR POWER, AS WELL AS PHOTOVOLTAICS. THESE ARE  
25 PEOPLE THAT INVESTED IN THE SEMI-CONDUCTOR INDUSTRY,  
0657

1 THAT INVESTED IN THE DOT COMS, AND THEY'RE LOOKING  
2 FOR A PLACE TO PUT THEIR MONEY NOW, AND IT'S REALLY  
3 HAPPENING. I HAVE BEEN IN THE RENEWABLE FIELD FOR  
4 30 YEARS, AND I HAVE NEVER SEEN ANYTHING LIKE WHAT  
5 I'M SEEING RIGHT NOW.

6 DO YOU HAVE A FOLLOW-UP QUESTION?

7 MR. CICERONE: (INAUDIBLE) I'M NOT TRYING  
8 TO BE NEGATIVE. I'M JUST TRYING TO GET YOUR SENSE OF  
9 WHETHER OR NOT THAT KIND OF OPPOSITION IS GOING TO BE  
10 A SIGNIFICANT BARRIER OR NOT, WITH ALL THESE OTHER  
11 GOOD INCENTIVES ON THE TABLE THAT YOU'VE OUTLINED.

12 DR. KUTSCHER: THERE IS NO QUESTION THAT IT  
13 IS A BARRIER. NOW, IF YOU LOOK AT BP AND SHELL AND  
14 GENERAL ELECTRIC, THERE ARE MORE AND MORE COMPANIES  
15 RIGHT NOW THAT ARE GETTING INTO RENEWABLE  
16 TECHNOLOGIES. YOU KNOW, GE IS GETTING VERY BIG IN  
17 WIND TURBINES. BP IS BIG IN PHOTOVOLTAICS. THERE  
18 ARE STILL COMPANIES OUT THERE THAT ARE POURING A LOT  
19 OF MONEY IN OPPOSITION. ONE OF THE OIL COMPANIES  
20 RECENTLY CAME OUT AND SAID IT WAS NO LONGER GOING TO  
21 DO THAT. ONE OF THE OIL COMPANIES HAD PUT MONEY  
22 INTO, I THINK, 40 DIFFERENT THINK TANKS TO COME OUT  
23 WITH ARTICLES ARGUING AGAINST THESE TYPES OF  
24 TECHNOLOGIES, MAKING IT LOOK LIKE THERE'S, YOU KNOW,  
25 A LOT OF CONCERN AND A LOT OF OPPOSITION. THEY HAVE  
0658

1 SINCE BACKED OFF. SO I THINK WE'RE SEEING A CHANGE;  
2 BUT THE REALITY IS IT IS STILL AN ISSUE. AND IT'S A  
3 BIG INDUSTRY. AND LIKE I SAY, IT'S A TOUGHER PROBLEM  
4 THAN WE FACED WITH THE OZONE BECAUSE OF THE SIZE OF  
5 THAT INDUSTRY.

6 DR. FRIEDMANN: IF I CAN JUST ADD SOMETHING  
7 VERY QUICKLY TO THAT.

8 RALPH, I'M SURE YOU KNOW, BUT MANY OF THE  
9 OTHERS MAY NOT, THAT THERE WAS A REPORT ISSUED THIS  
10 SUMMER CALLED "FACING HARD TRUTHS" THAT WAS REQUESTED  
11 BY THE SECRETARY OF ENERGY AND WAS PRODUCED  
12 ESSENTIALLY BY PEOPLE WORKING WITH OR IN THE OIL AND  
13 GAS INDUSTRY. AND ONE OF THE VERY FIRST CONCLUSIONS  
14 OF THAT WAS THAT EFFICIENCY WAS THE BIGGEST LEVER,  
15 AND THEY SHOULD GO AFTER IT. AND SO THERE DOES SEEM  
16 TO BE SOME ROUNDING OF THE CORNER ON THAT.

17 DR. SOCOLOW: WE'LL HAVE ONE LAST QUESTION.

18 DR. MACDONALD: I'M SANDY MACDONALD WITH  
19 EARTH SYSTEM RESEARCH LAB IN BOULDER, AND MY QUESTION  
20 IS FOR CHUCK.

21 I THOUGHT YOUR PRESENTATION WAS  
22 OUTSTANDING, AND IT SHOWED ALL OF THE DIFFERENT  
23 POSSIBILITIES ADDING UP TO HEAVEN KNOWS HOW MANY  
24 WEDGES, BUT IT'S INTERESTING THAT WHENEVER THIS  
25 SUBJECT COMES UP AND YOU HEAR A PRESENTATION LIKE  
0659

1 THIS AND THEN I GO TALK TO MY FRIENDS, ONE OF WHOM IS

2 AN EXECUTIVE IN AN ELECTRIC POWER COMPANY, THEY  
3 ALWAYS SAY: WELL, YOU KNOW, IT'S A DISTRIBUTION  
4 PROBLEM. THE WIND BLOWS HERE, AND IT ONLY BLOWS  
5 INTERMITTENTLY, AND THE SUN ONLY SHINES AWHILE. AND  
6 I NEVER HEAR KIND OF WHAT IS SO OBVIOUS, WHICH IS A  
7 NATIONAL SYSTEM OF POWER TRANSMISSION AND  
8 DISTRIBUTION THAT WOULD SORT OF FIT WITH A RENEWABLE  
9 KIND OF SYSTEM LIKE YOU'VE DESCRIBED.

10 AND YOU DIDN'T -- YOU DIDN'T DO IT IN THIS  
11 TALK, BUT IT SEEMS TO ME LIKE, WITH VERY NICE THINGS  
12 LIKE . . . SHORT ENOUGH THAT IF THE WIND IS BLOWING  
13 REALLY HARD . . . AND IT IS NOT BLOWING HARD IN  
14 TEXAS, SO IT SEEMS TO ME LIKE WE COULD DESIGN A  
15 COMPLETE SYSTEM, AND THAT'S THE WAY WE OUGHT TO START  
16 BY EXPLAINING THIS.

17 DR. KUTSCHER: OKAY. THANKS FOR THAT  
18 QUESTION.

19 CERTAINLY, TRANSMISSION IS AN ISSUE. YOU  
20 LOOK, FOR EXAMPLE, IN TEXAS, THEY HAVE AN AWFUL LOT  
21 OF WIND IN WEST TEXAS, BUT THEY NEED TO MOVE THAT  
22 WIND POWER FROM WEST TEXAS TO THE POPULATION CENTERS  
23 IN THE EASTERN SIDE OF THE STATE. THERE ARE A NUMBER  
24 OF WAYS THAT CAN BE ADDRESSED. CERTAINLY, SPATIAL  
25 DIVERSITY IS ONE. TYPICALLY, WHEN THE WIND ISN'T

0660  
1 BLOWING IN ONE PLACE, IT'S BLOWING IN ANOTHER PLACE.  
2 AND SO IF YOU HAVE LARGE ENOUGH AREAS IN THE GRID  
3 WHERE ELECTRICITY CAN BE MOVED FROM ONE AREA TO  
4 ANOTHER, YOU CAN HANDLE THAT.

5 THERE ALSO HAVE BEEN NEW LAWS THAT WE'RE  
6 SEEING IN STATES; FOR EXAMPLE, IN THE STATE OF  
7 COLORADO, THEY'RE TRYING TO INCENTIVIZE UTILITIES TO  
8 BUILD TRANSMISSION LINES SO THAT THEY ACTUALLY GET  
9 PAID TO BUILD THOSE TRANSMISSION LINES AND THEY GET  
10 COST RECOVERY ON THOSE. AND SO THERE ARE THESE  
11 RENEWABLE ENERGY ZONES THAT ARE BEING CREATED WHERE  
12 TRANSMISSION IS BEING BUILT TO THOSE ZONES TO ALLOW  
13 THAT TO BE TRANSPORTED.

14 SO, I MEAN, I THINK THAT, YOU KNOW, THAT  
15 ISSUE IS STILL A BIG ONE. STEVEN CHU, AT LAWRENCE  
16 BERKELEY LABORATORY, HAS ARGUED THAT WE NEED  
17 SOMETHING AKIN TO WHAT WAS DONE DURING THE EISENHOWER  
18 ADMINISTRATION WITH THE NATIONAL HIGHWAY SYSTEM. I  
19 THINK WE DO NEED A BETTER NATIONAL ELECTRIC GRID.  
20 OUR GRID IS PRETTY OLD. WE SAW IN THE BLACKOUT A FEW  
21 YEARS AGO HOW SUSCEPTIBLE IT IS. SO IMPROVEMENTS  
22 NEED TO BE MADE TO THE GRID. A LOT OF PEOPLE WOULD  
23 LIKE TO SEE, AS THE GRID IS IMPROVED, NOT ONLY WILL  
24 IT ALLOW RENEWABLE POWER TO BE MOVED AROUND, BUT WILL  
25 ALSO ALLOW A SMART GRID, WHERE INFORMATION FLOWS BOTH

0661  
1 WAYS IN THOSE TRANSMISSION LINES, SO UTILITIES HAVE  
2 SOME CONTROL OVER PEAK DEMAND IN HOMES AND IN  
3 BUSINESSES.

4 SO I THINK YOU'RE RIGHT. I THINK  
5 TRANSMISSION IS AN ISSUE, BUT THERE'S A LOT OF WORK  
6 BEING DONE ON THAT. PARTICULARLY THE WIND INDUSTRY

7 HAS BEEN VERY INTERESTED IN PURSUING THAT, AND I  
8 THINK A LOT OF PROGRESS IS BEING MADE.  
9
