DCD Release Note 37.0

“Just Enough ‘vi’ ”

Randolph Herber

August 24, 1994

“vi” is the main interactive editor in the UNIX[1] operating system. Since it usually comes standard with the operating system, you can depend on it being available. Furthermore, the older “ed” editor is a near subset. Also, one of the command line edit modes of “ksh” is “vi”.

This Release Note is the viewgraph set used in a Brown Bag Seminar session to introduce the “vi” editor.
